

Ti verranno presentate 8 serie di immagini (ciascuna serie è di 23 immagini) che mostrano variazioni di una proprietà di un oggetto, da un estremo all'estremo contrario.

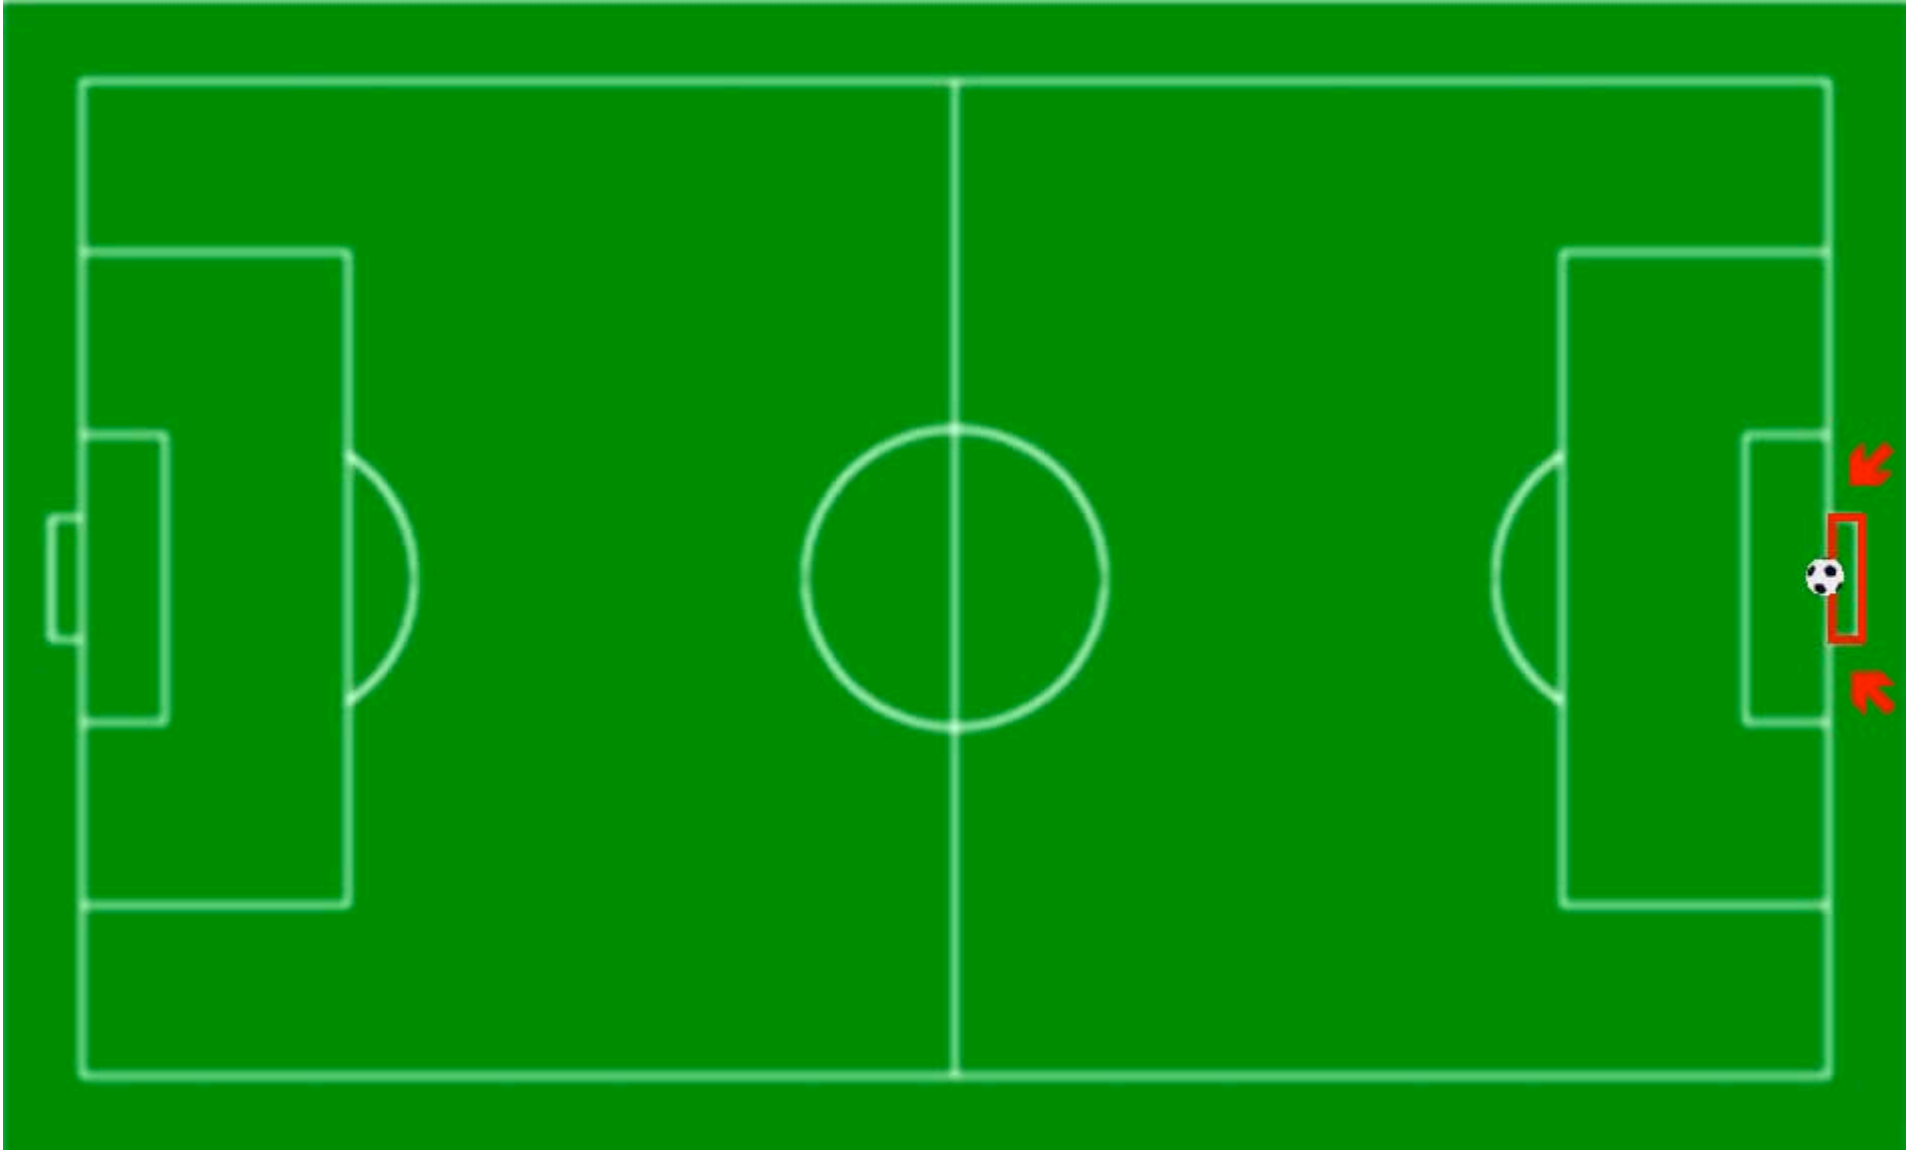

(es: un pallone che da massimamente vicino alla rete diventa massimamente lontano, passando per una serie di stati che sono tra questi due estremi)

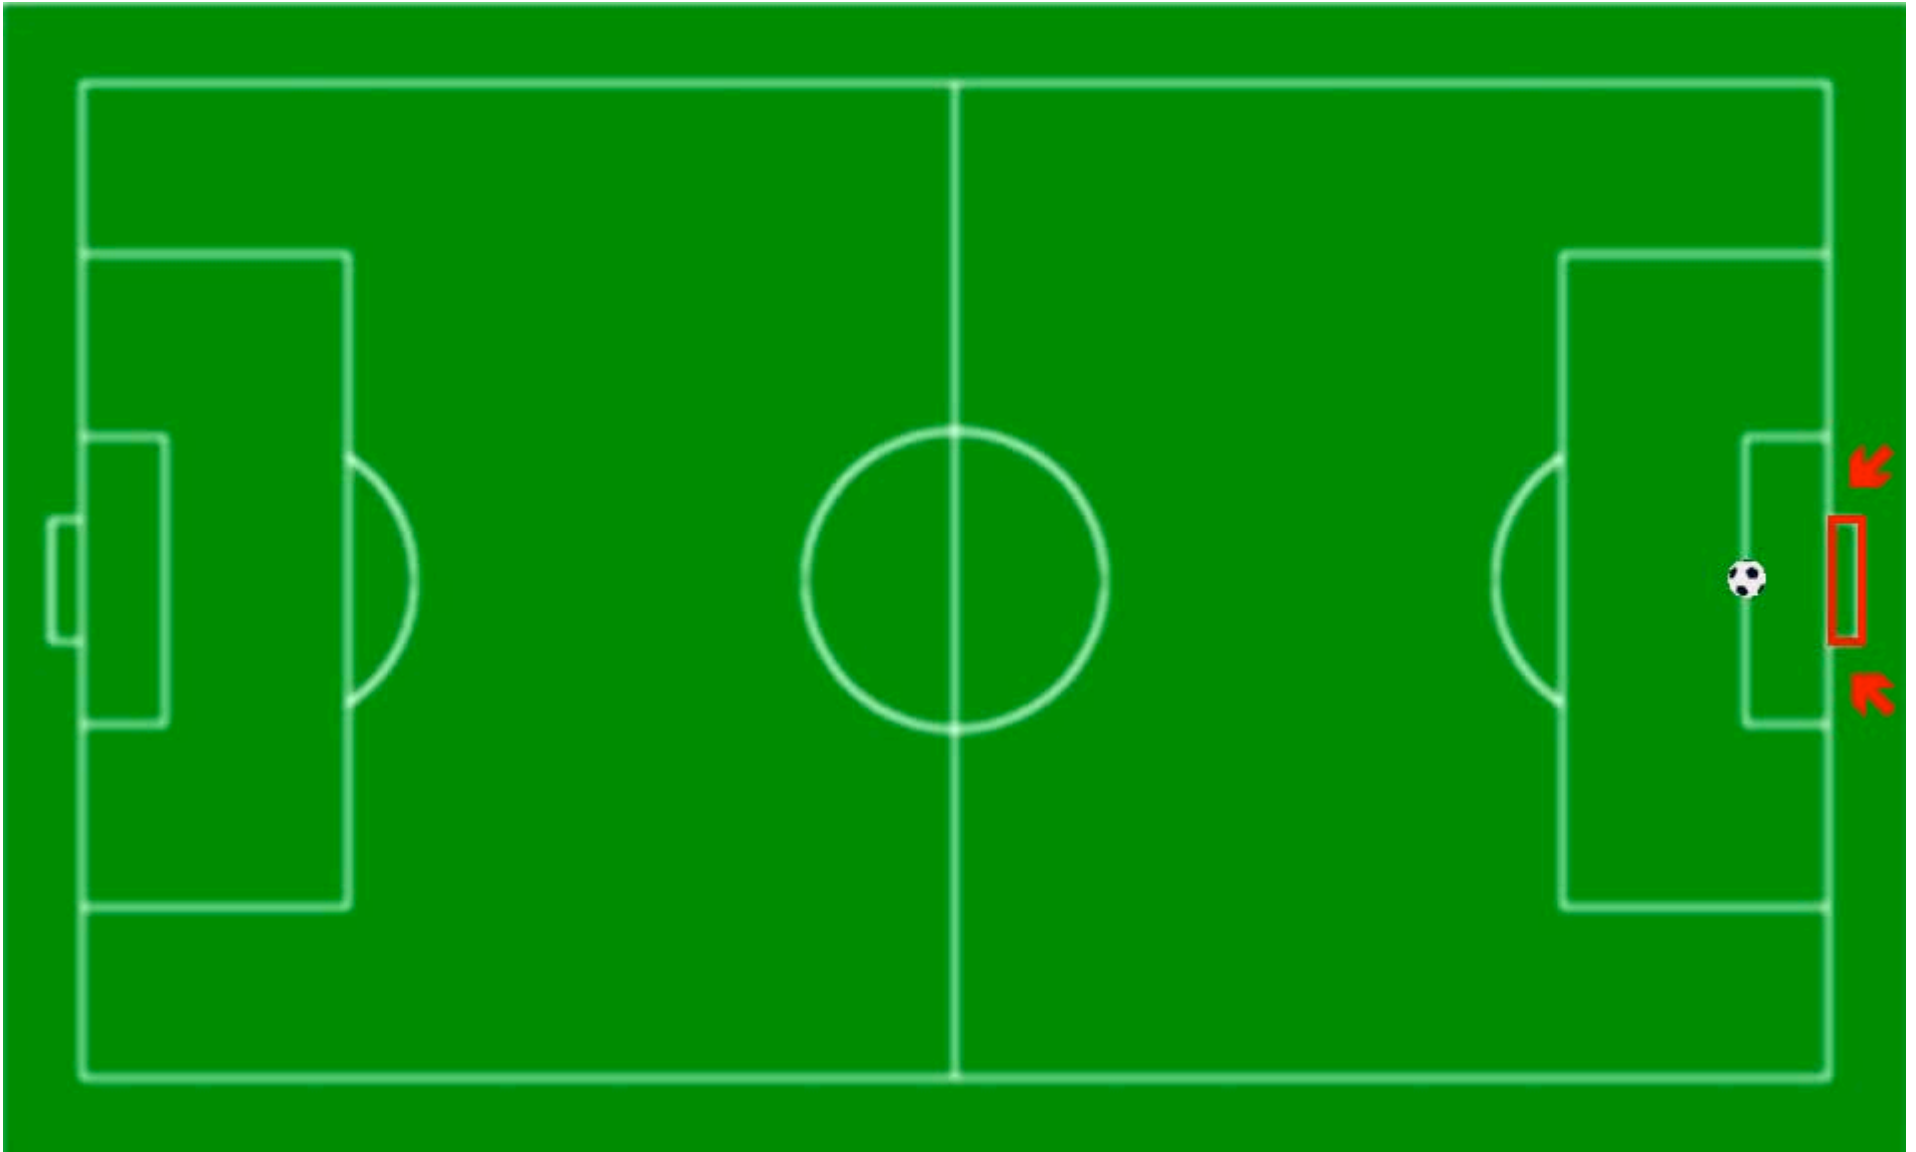

Tu devi osservare ciascuna immagine e dirmi **guardando quali immagini percepisci la proprietà** (ad esempio) **vicino**, guardando quali immagini percepisci la proprietà **lontano** e guardando quali immagini (se ce ne sono, ma potrebbero anche non essercene) percepisci la proprietà **né vicino, né lontano**.

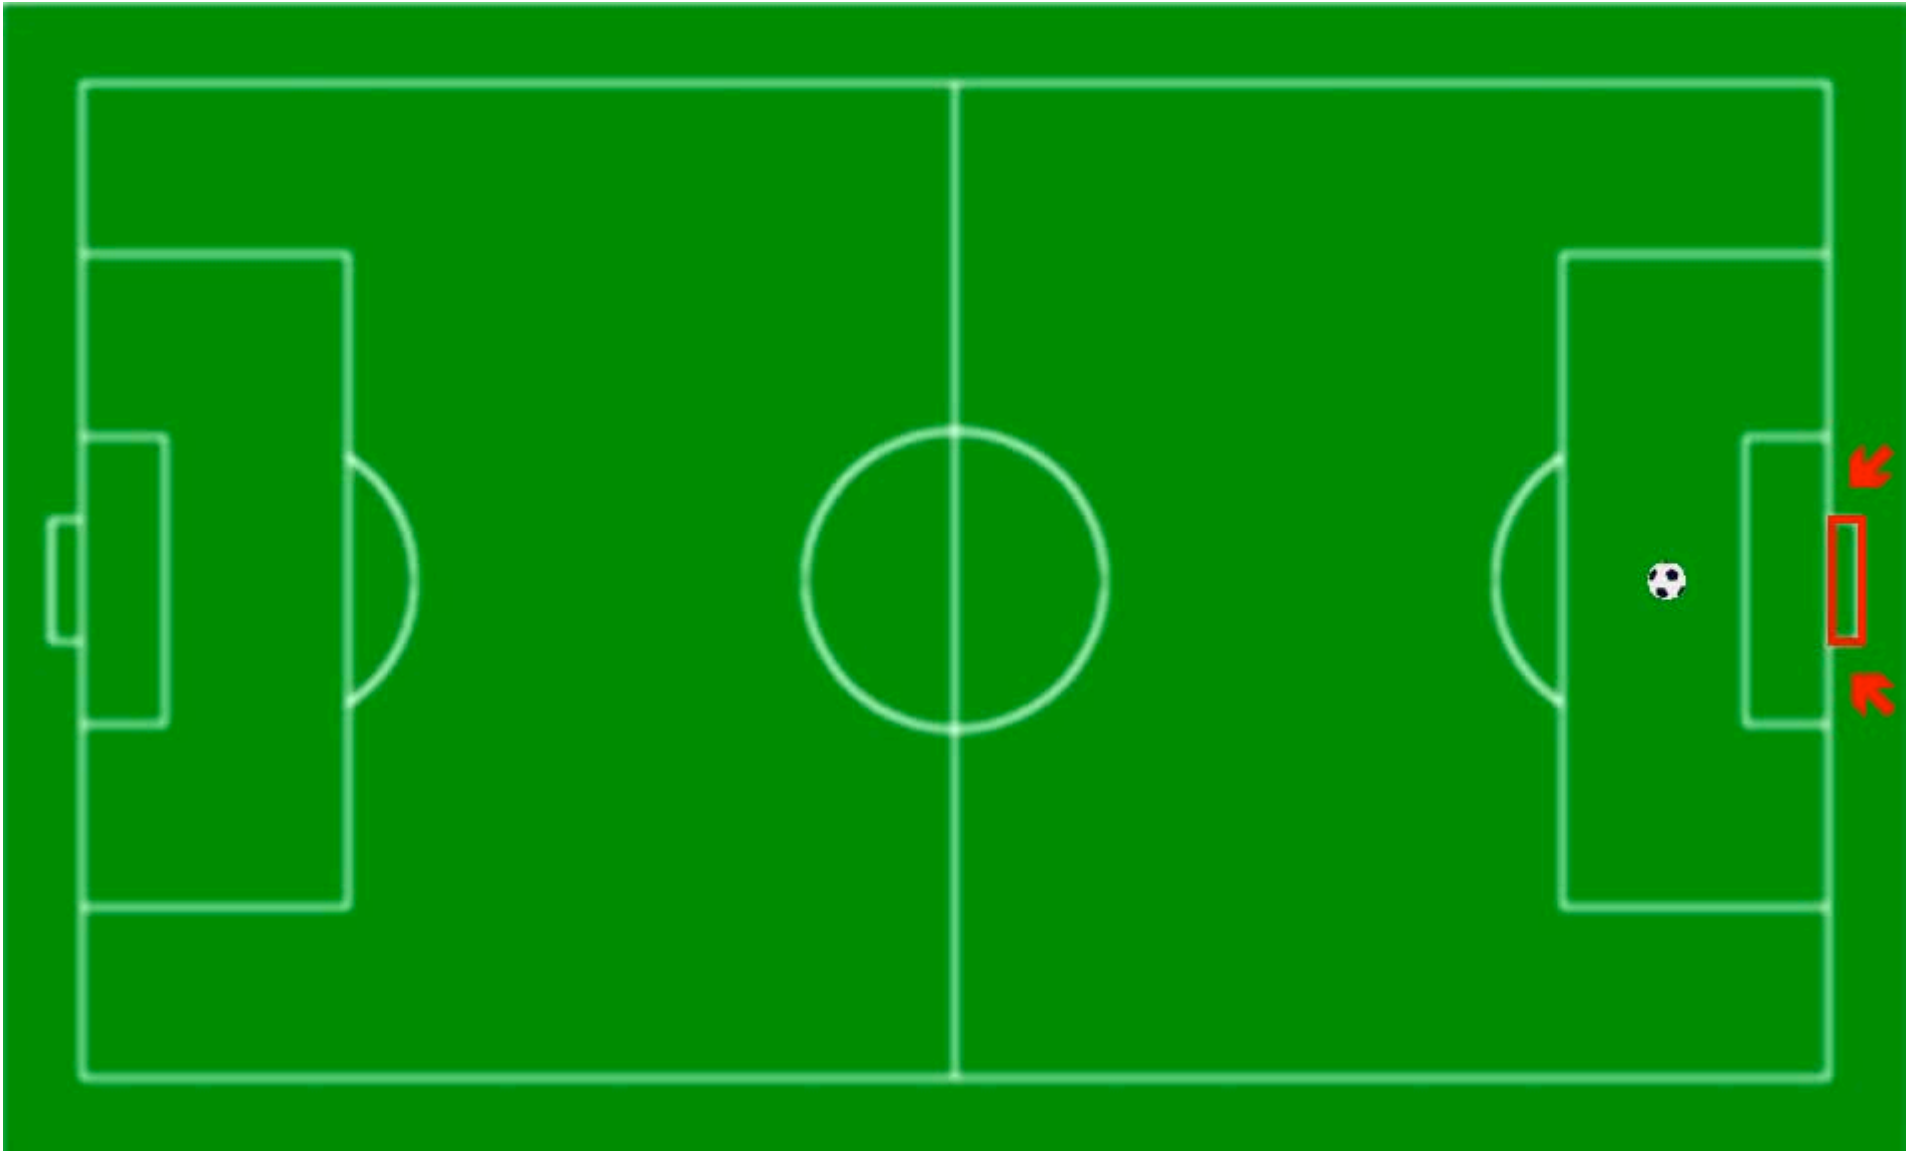

Non ci sono risposte giuste e risposte sbagliate. Quello che ci interessa è capire quali stati vengono **riconosciuti** come una data proprietà e quali come un'altra proprietà. Quindi basati su quello che vedi, facendo però attenzione a non dare risposte approssimative. Pensa che le tue risposte servano per insegnare ad una macchina a distinguere nel mondo le proprietà in questione, quindi **sii preciso e non approssimativo**.

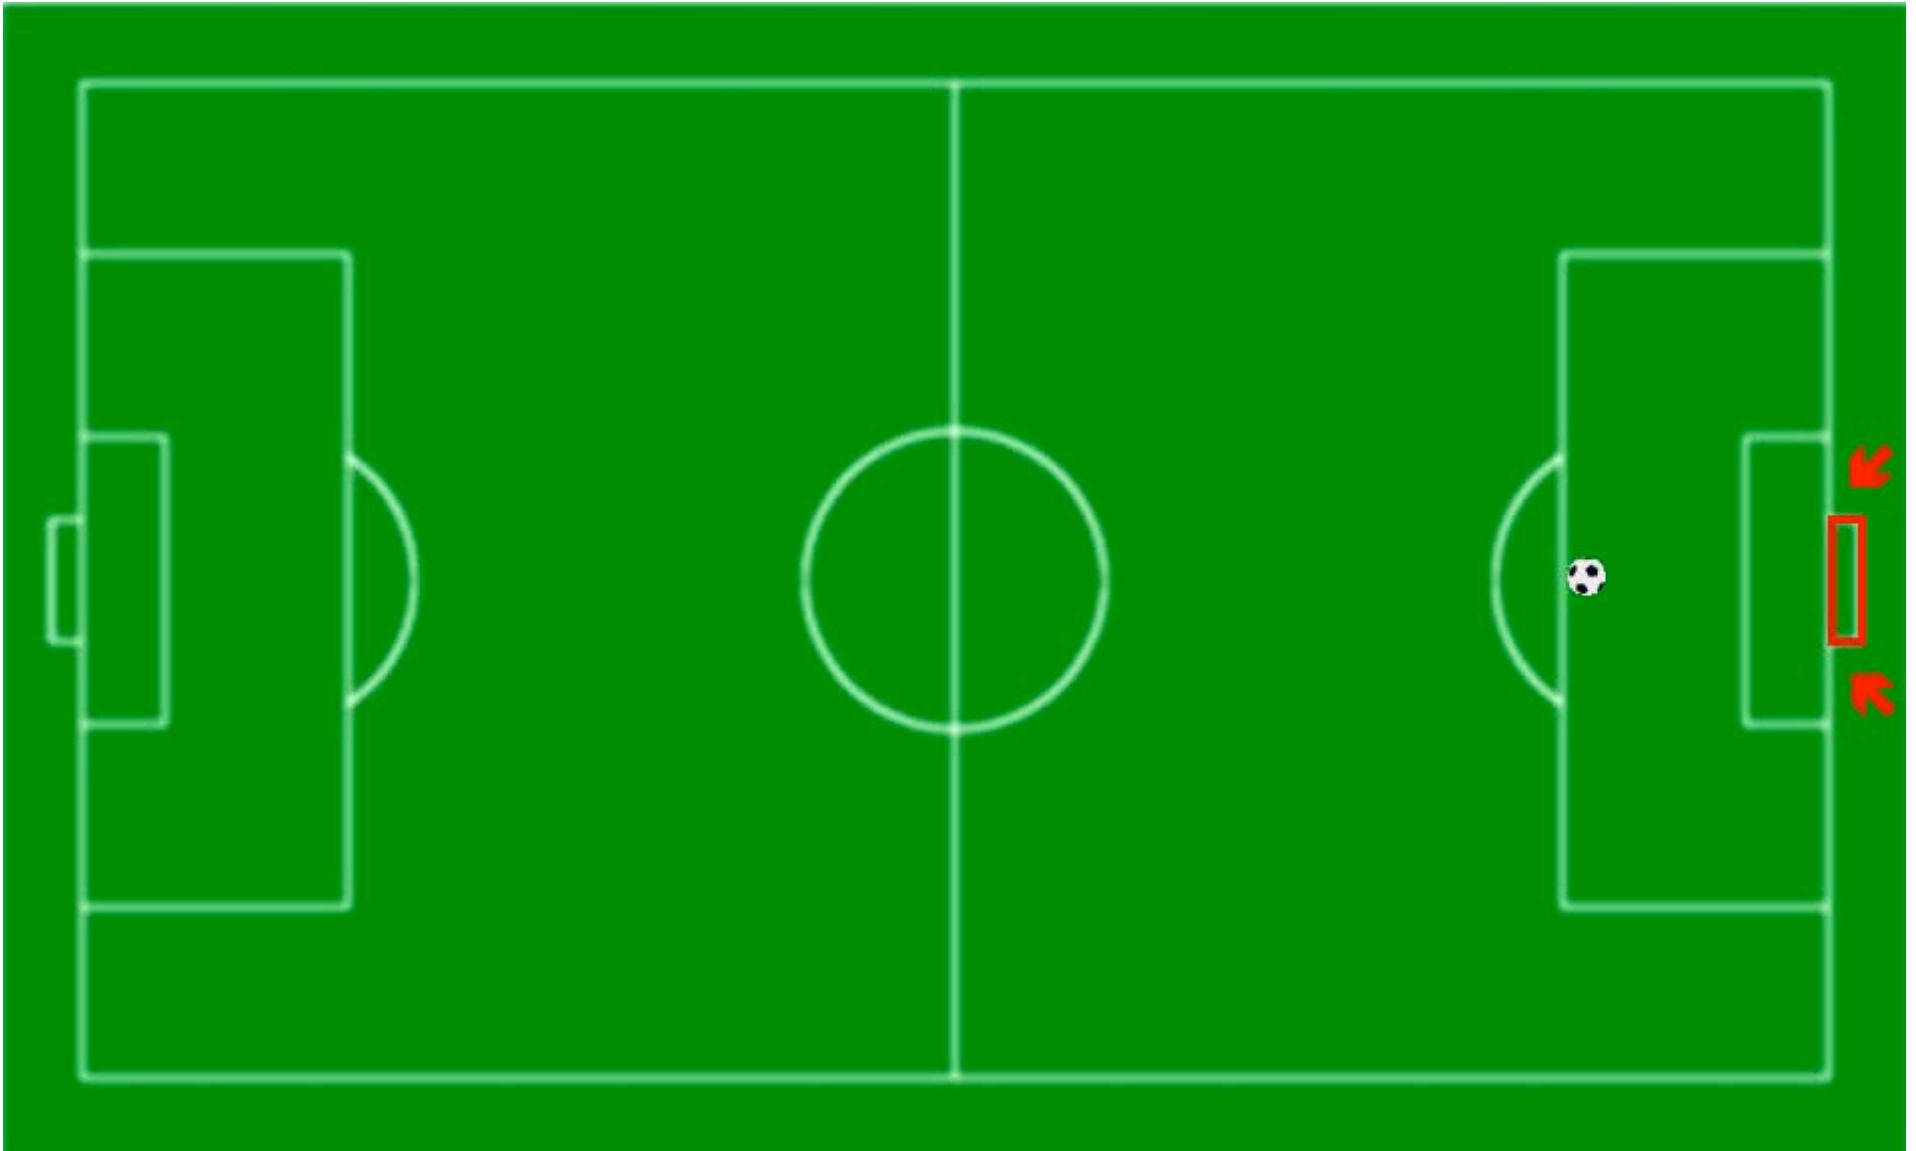

Grazie per la collaborazione.

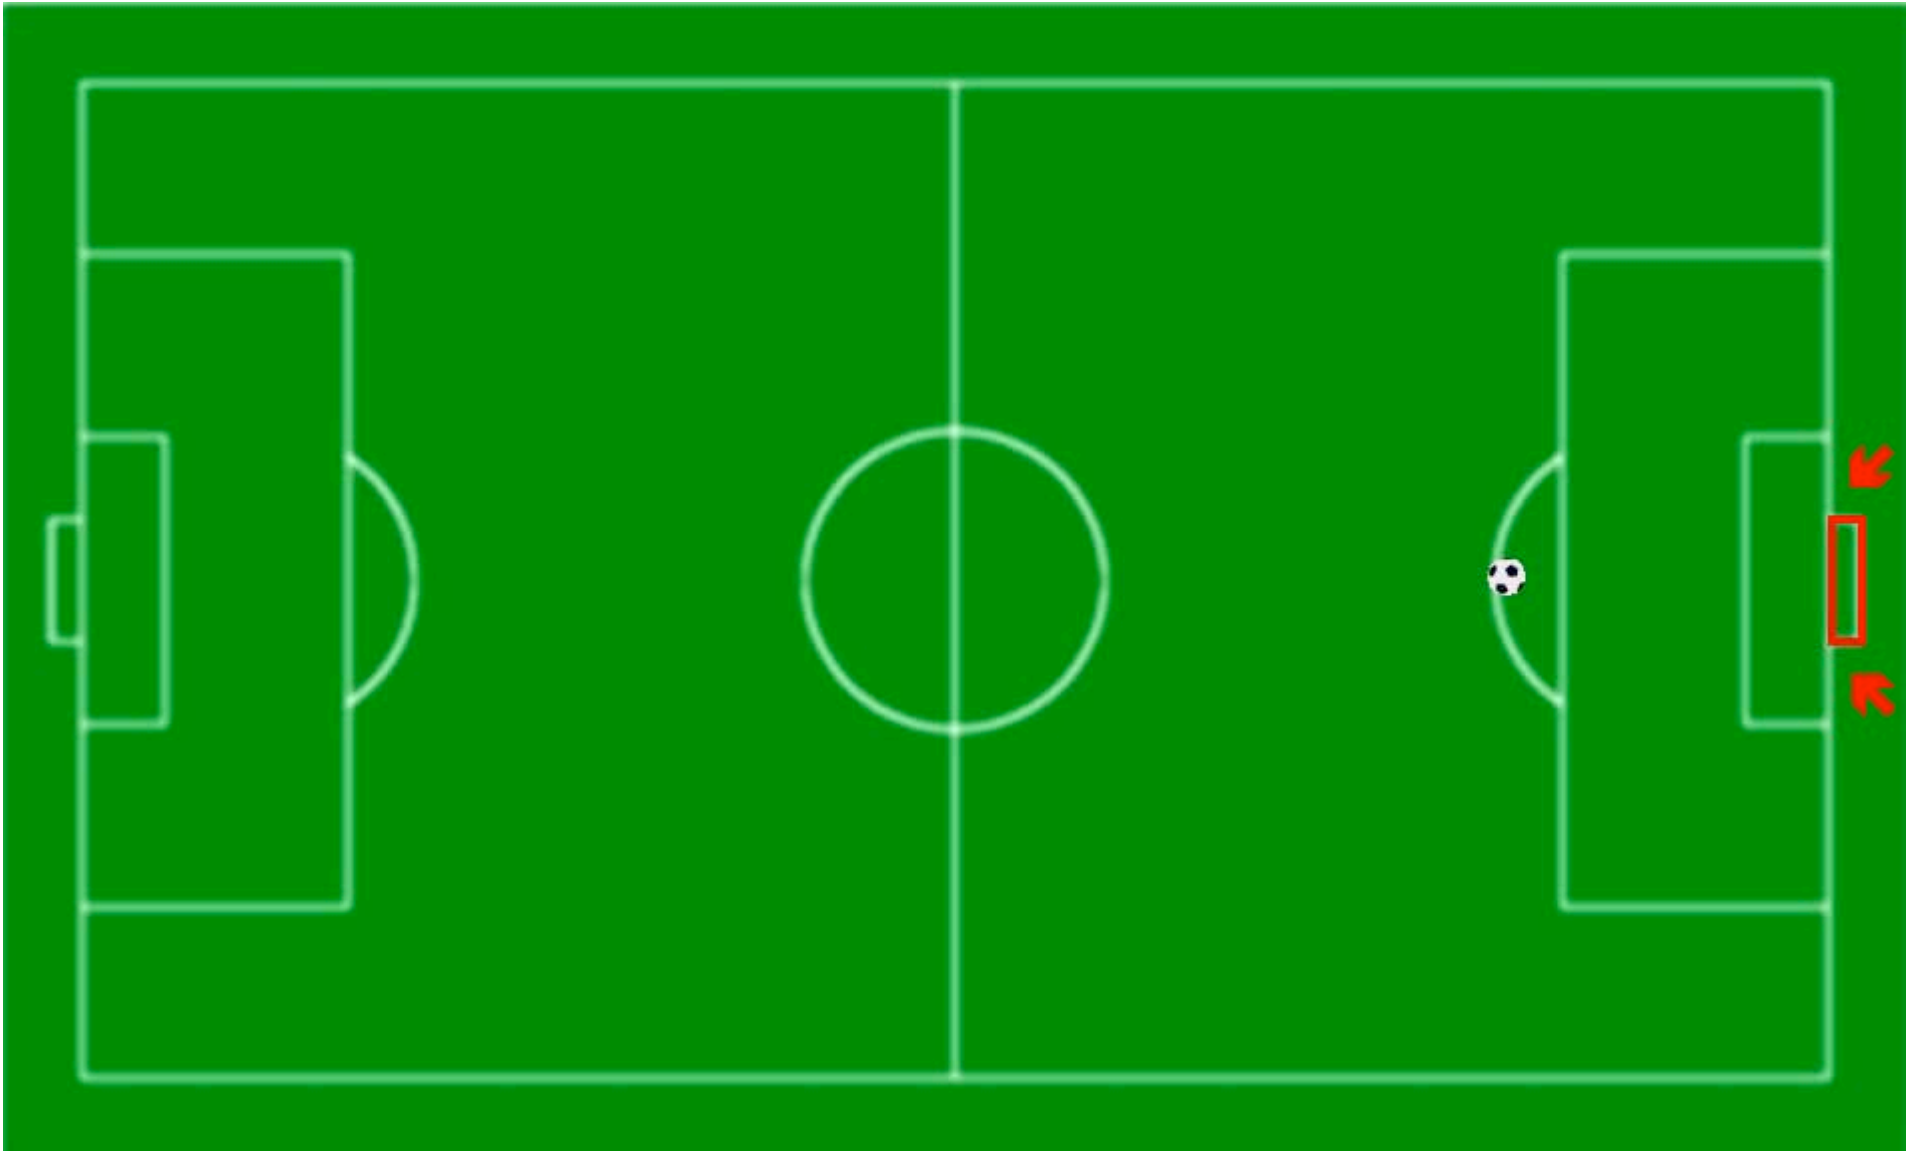

Il pallone è **vicino/lontano/né vicino né lontano** alla porta indicata in rosso ?

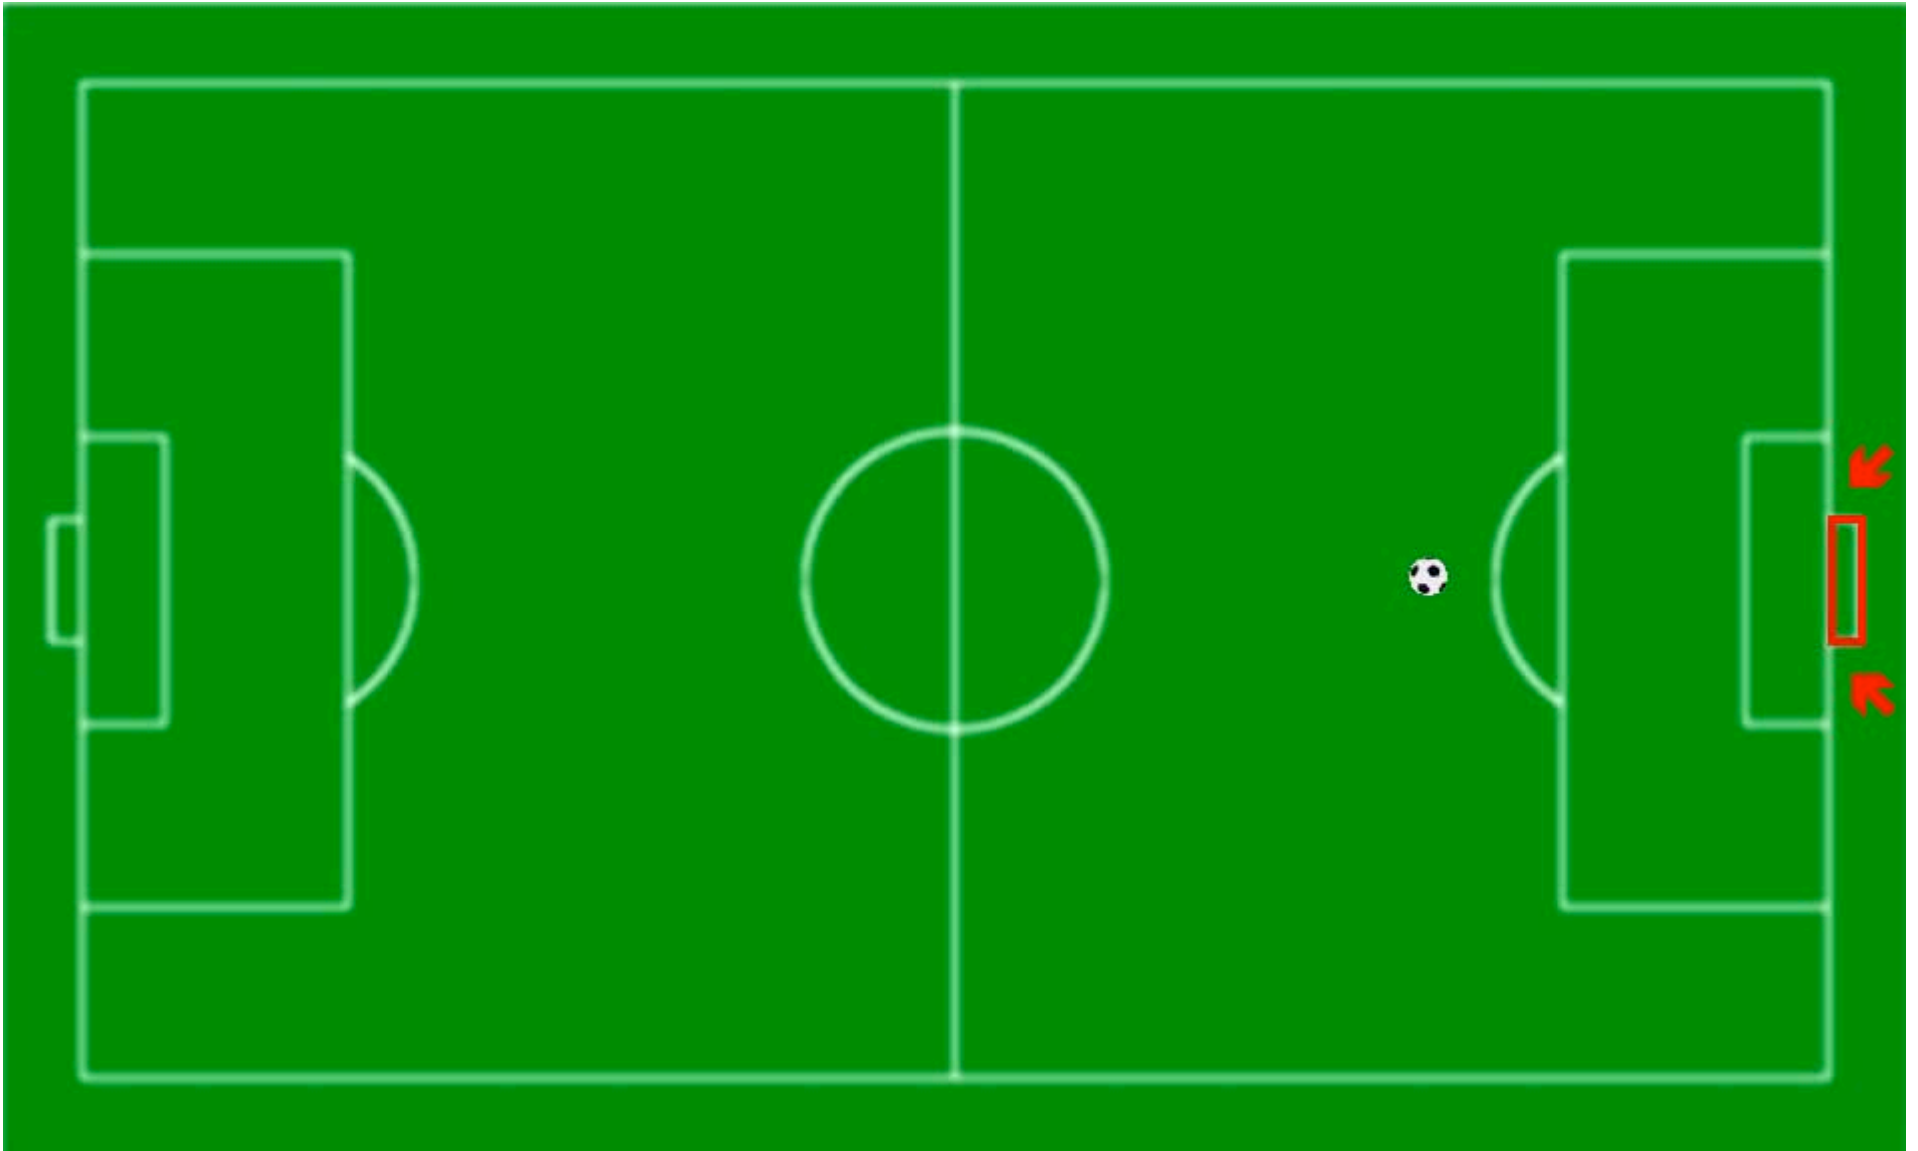

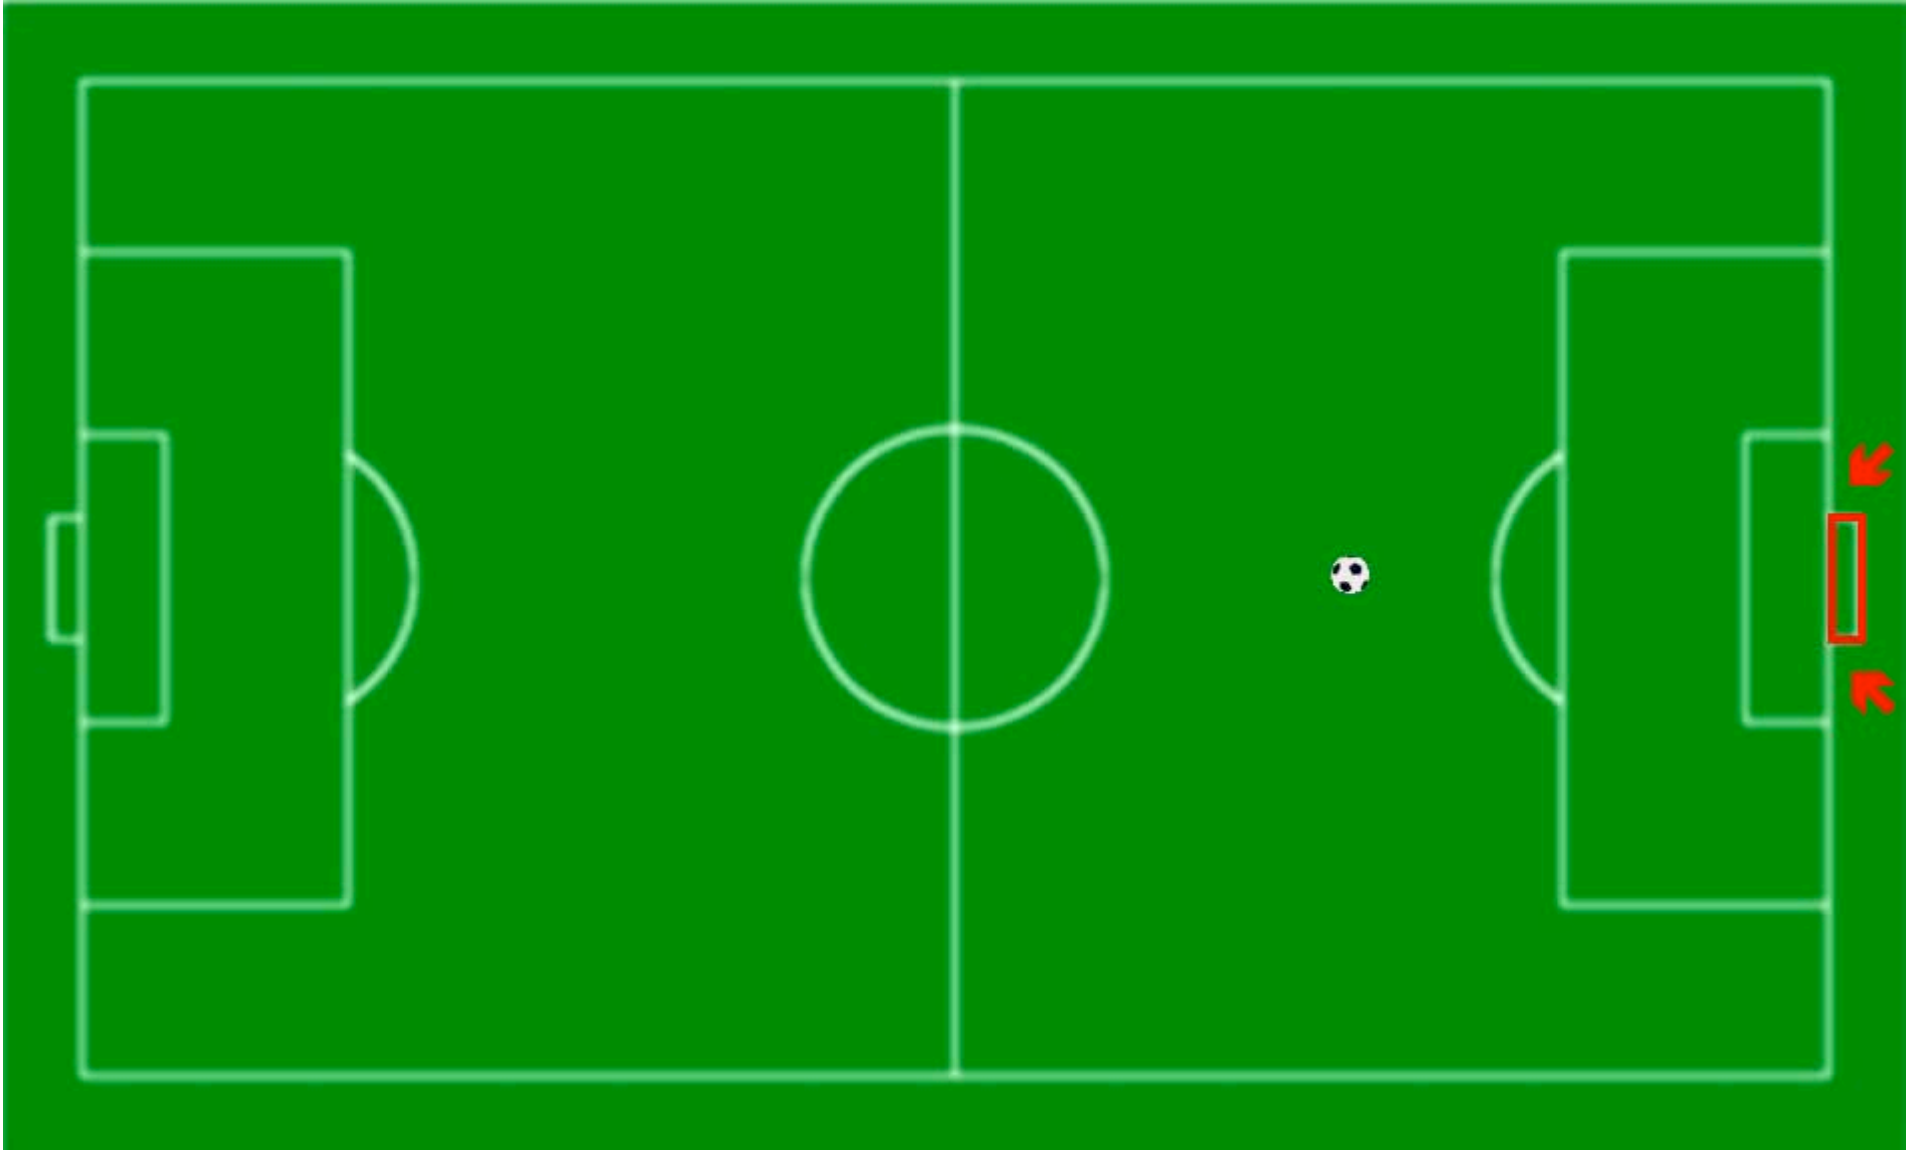

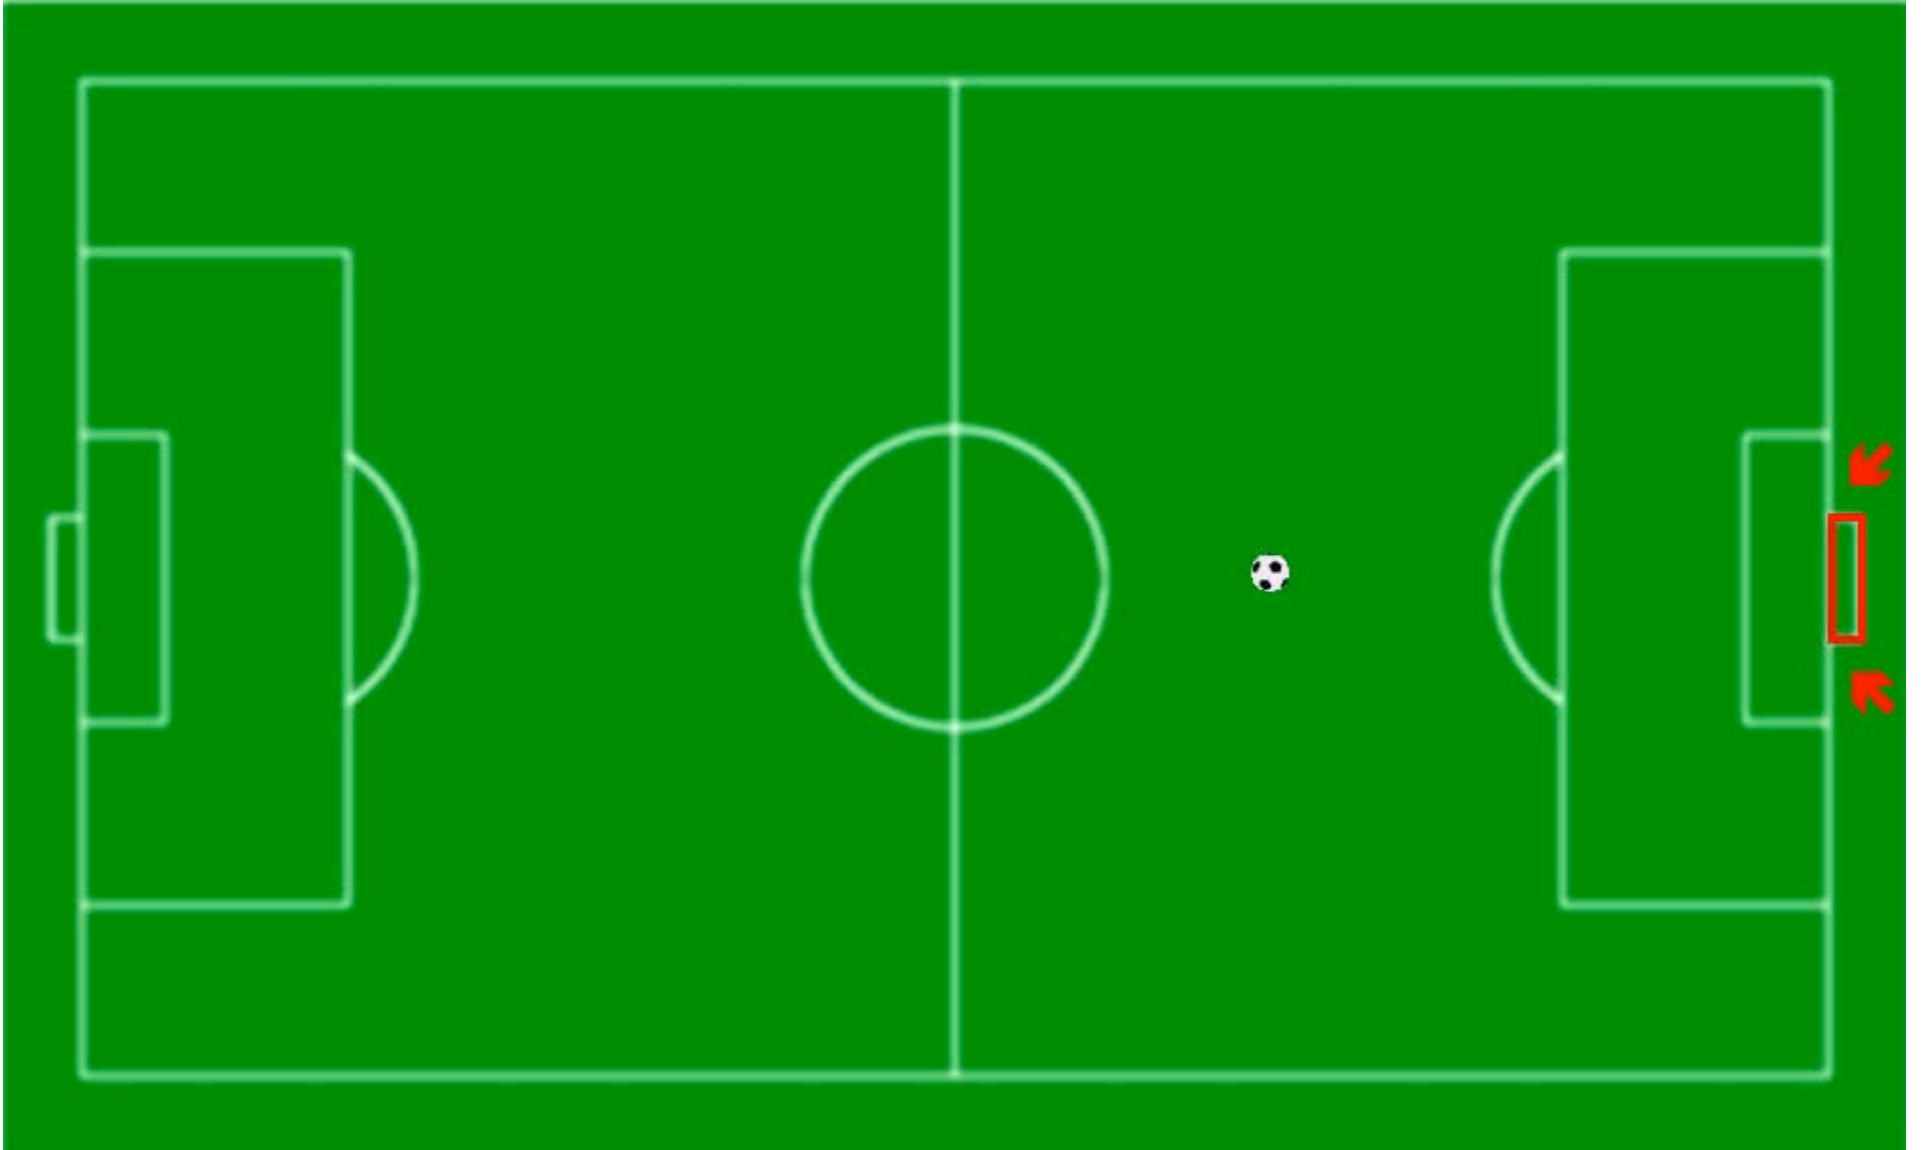

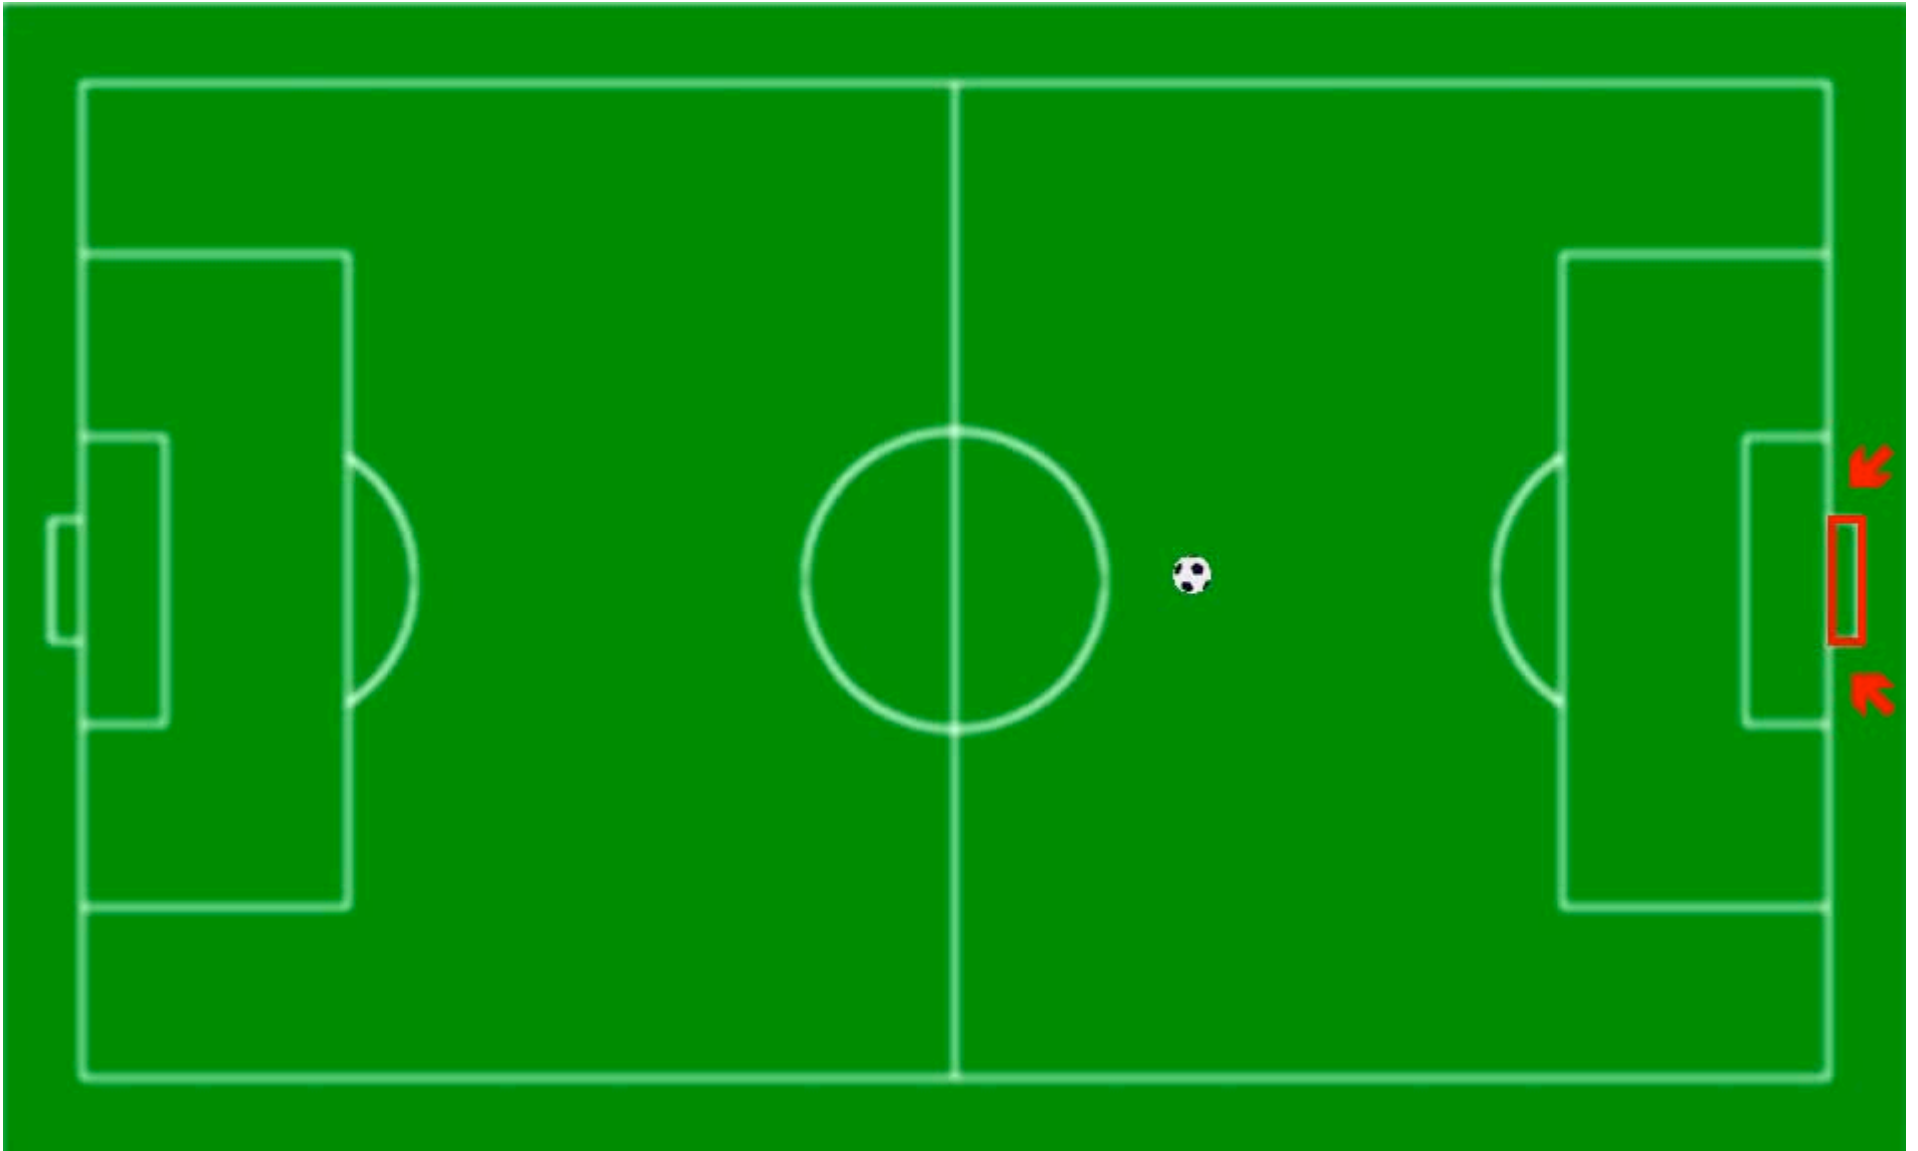

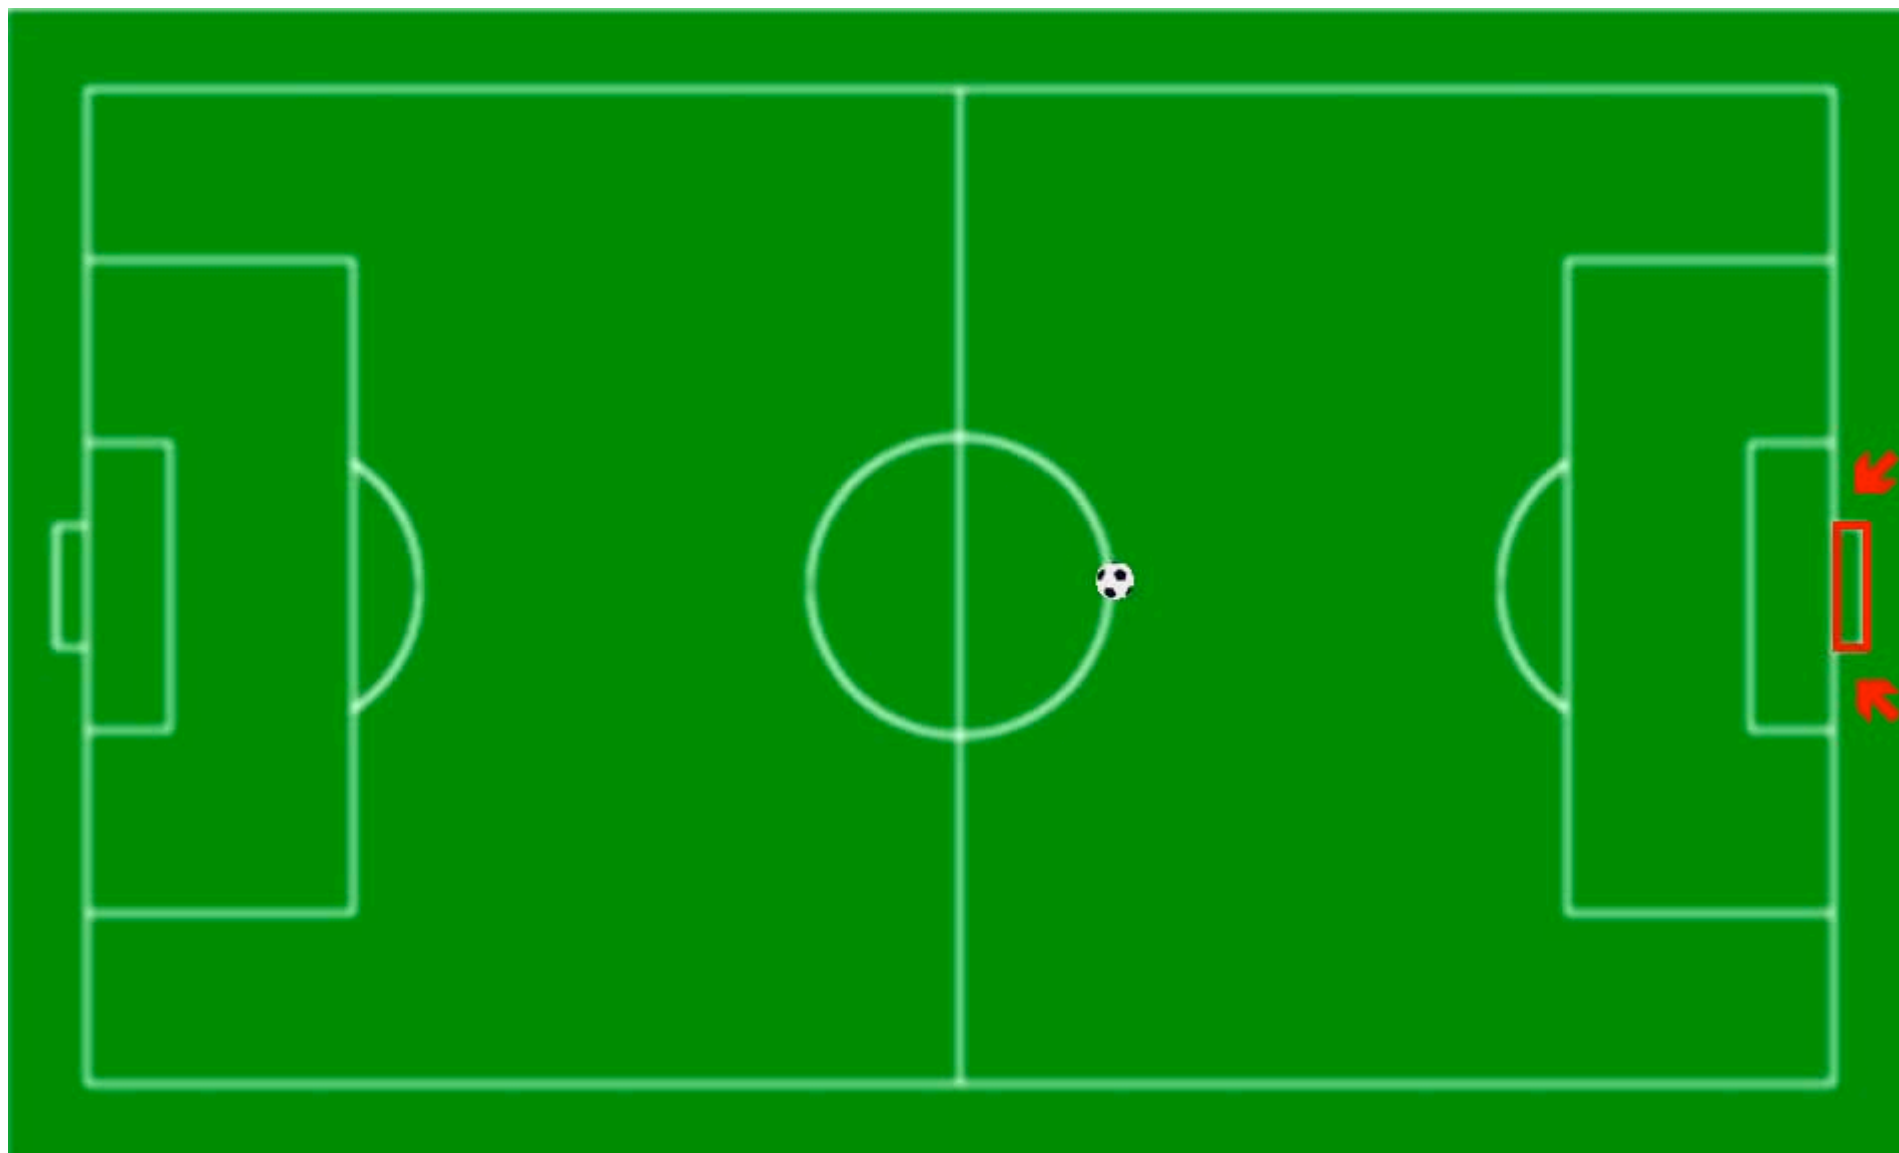

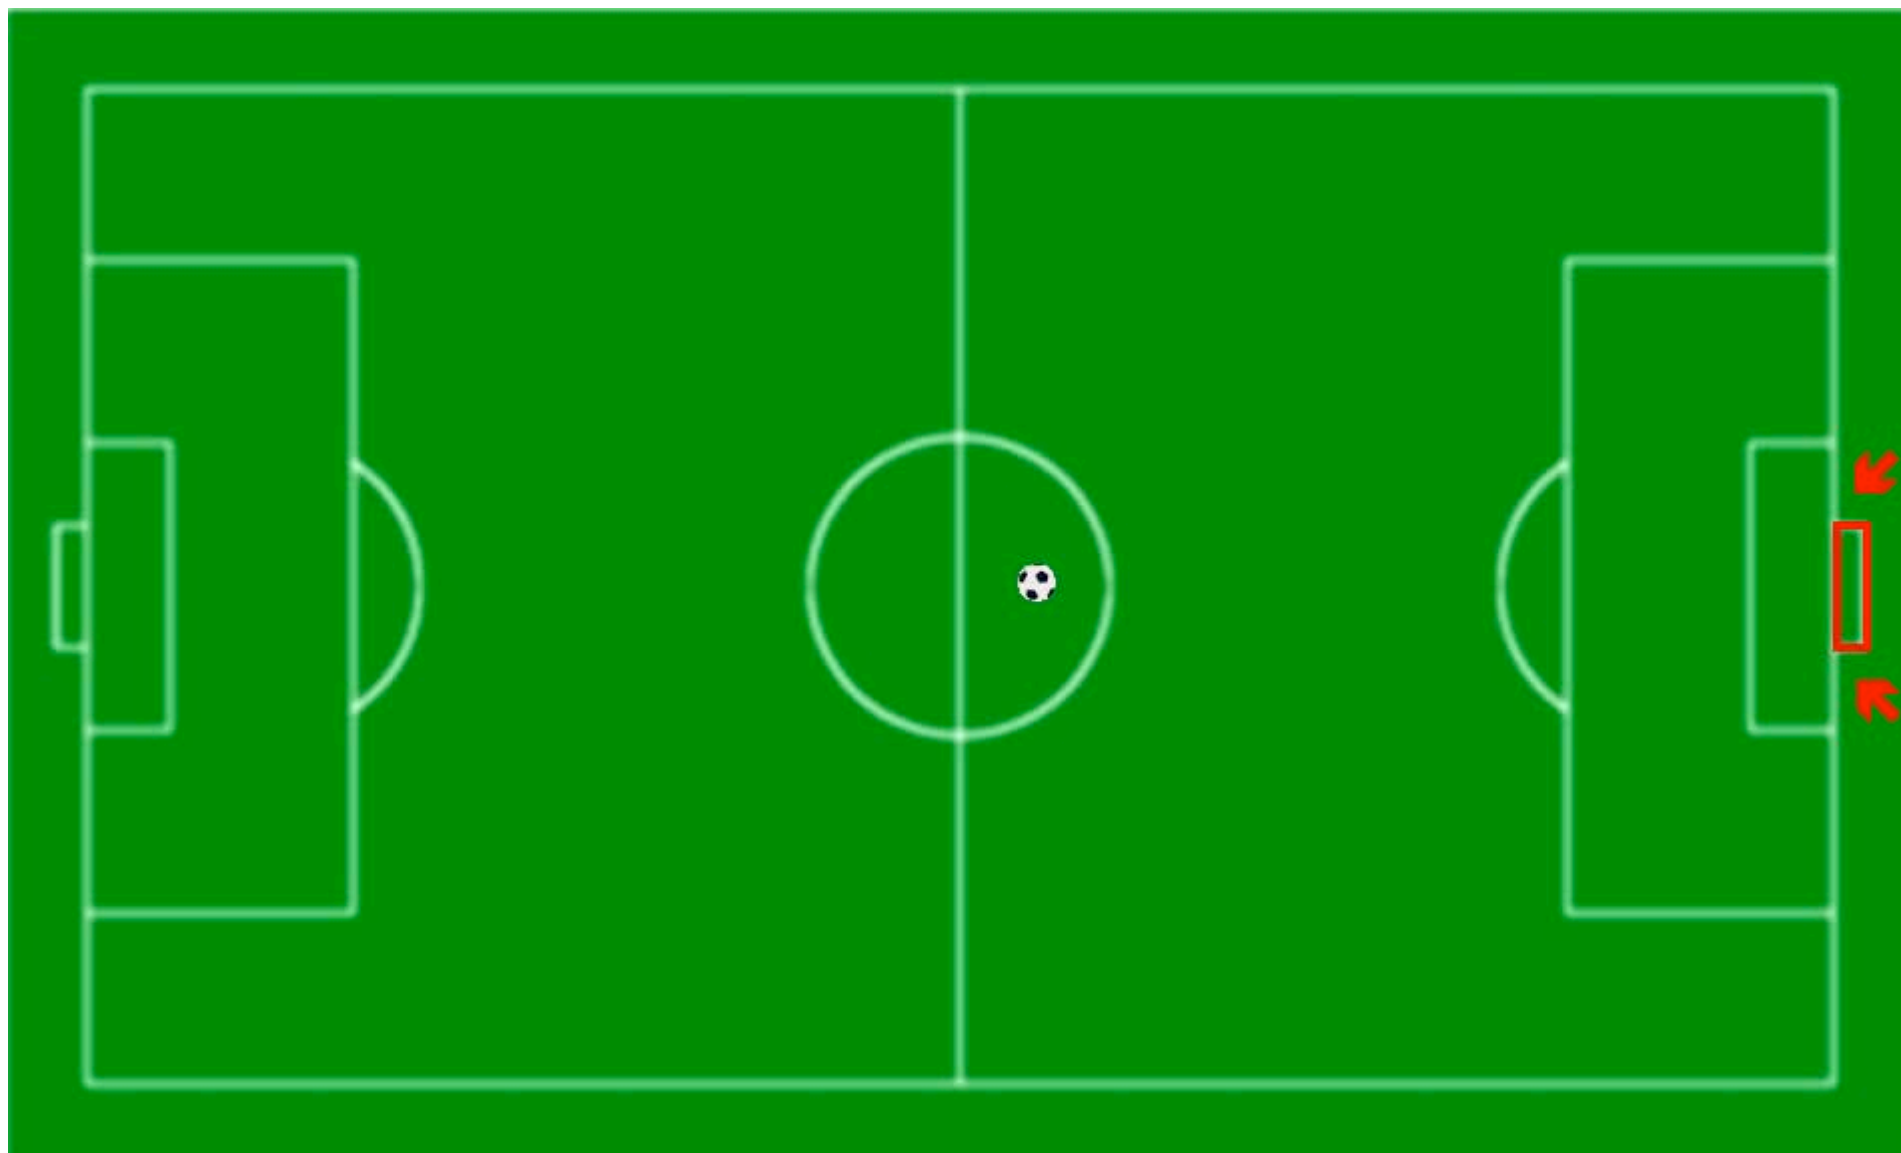

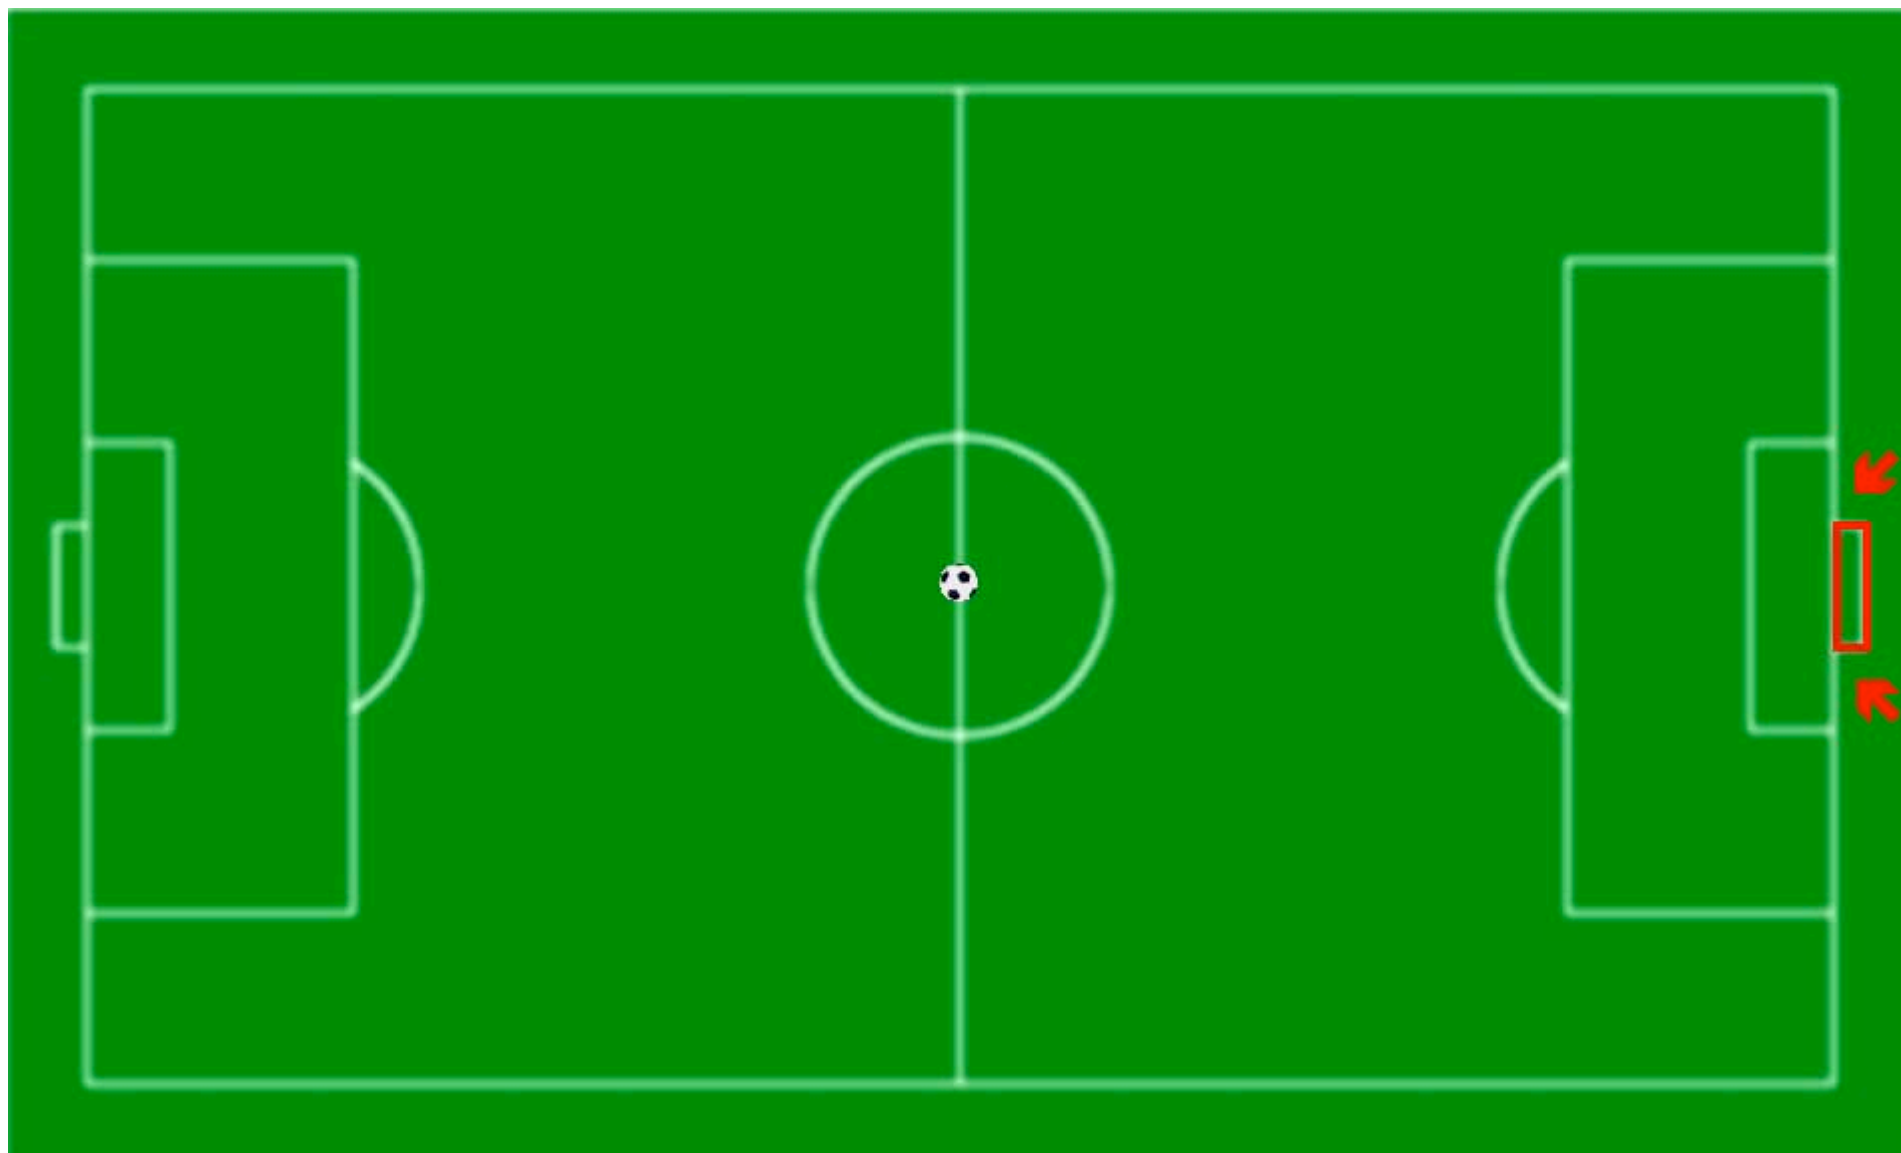

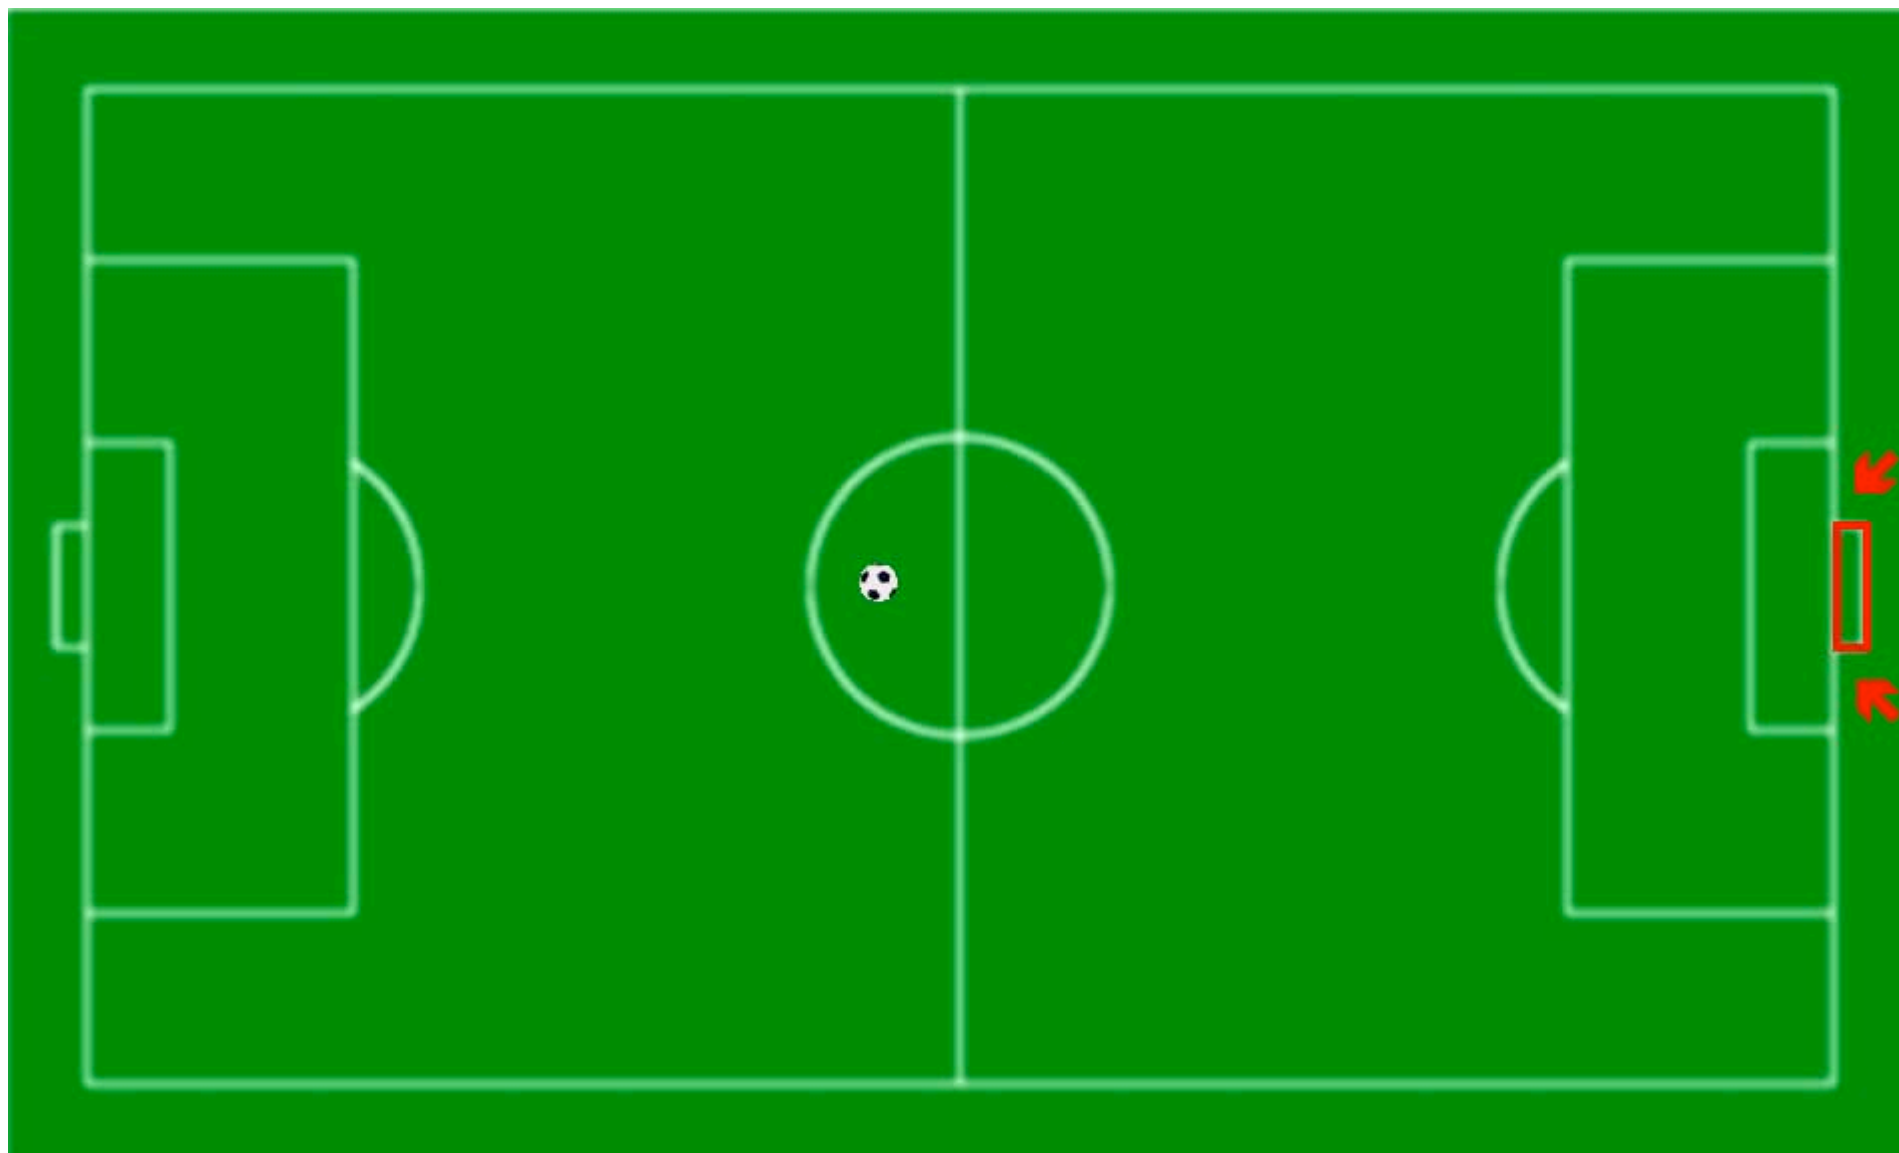

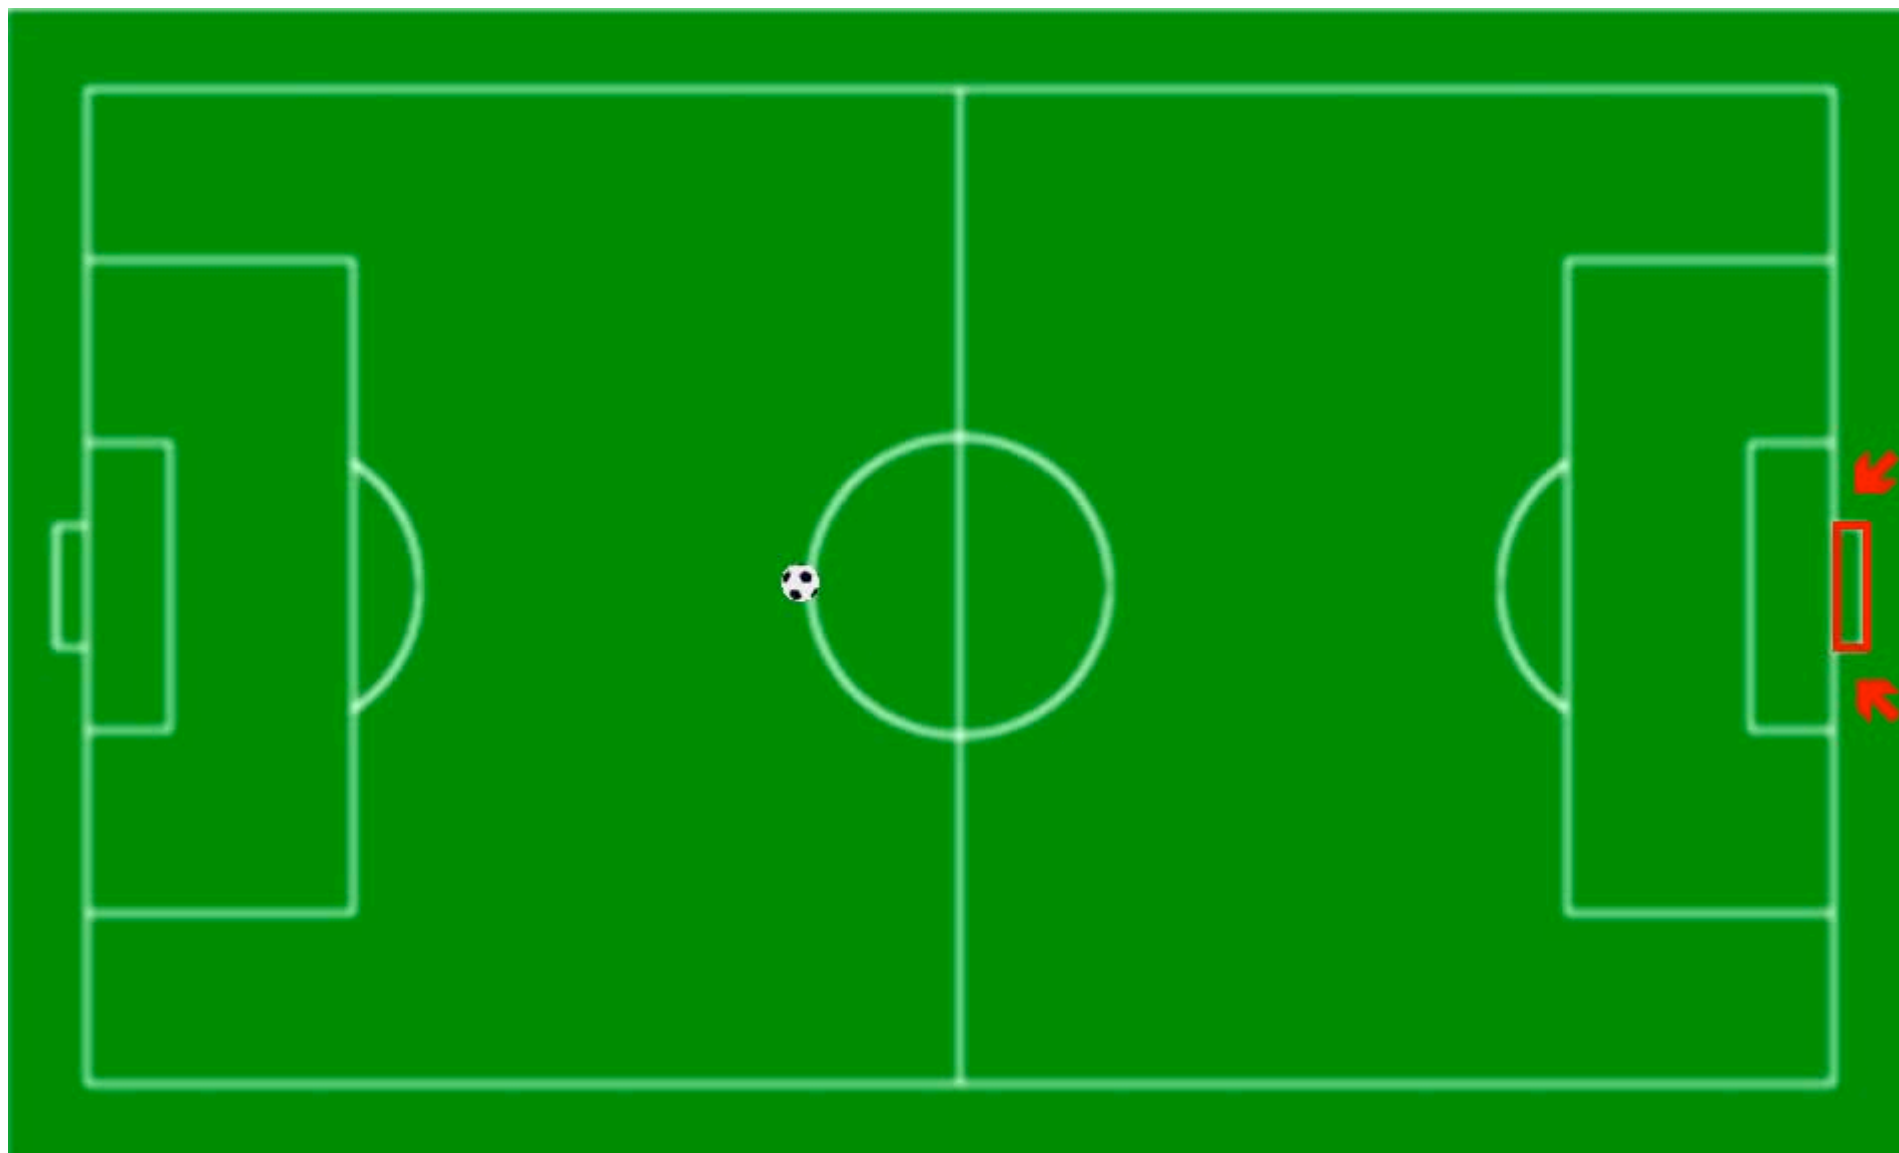

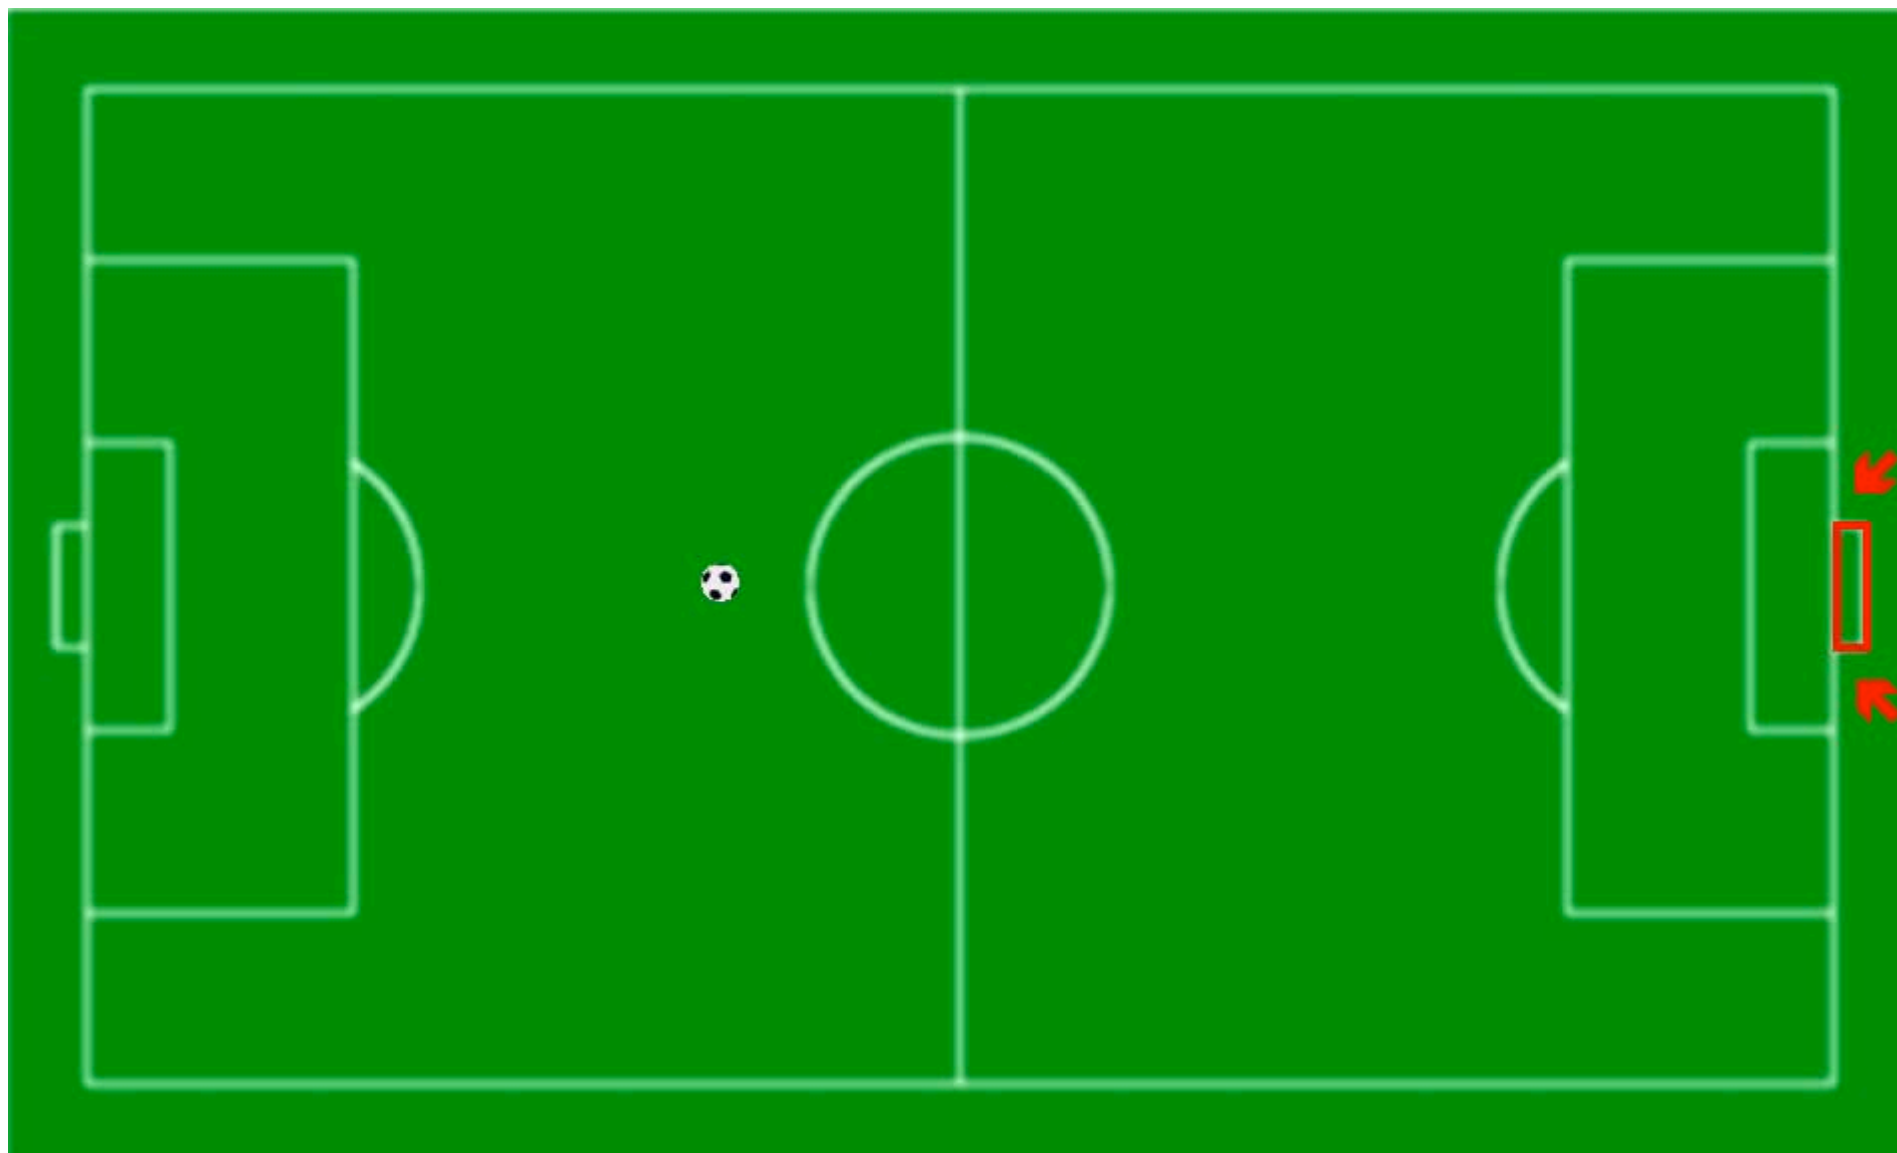

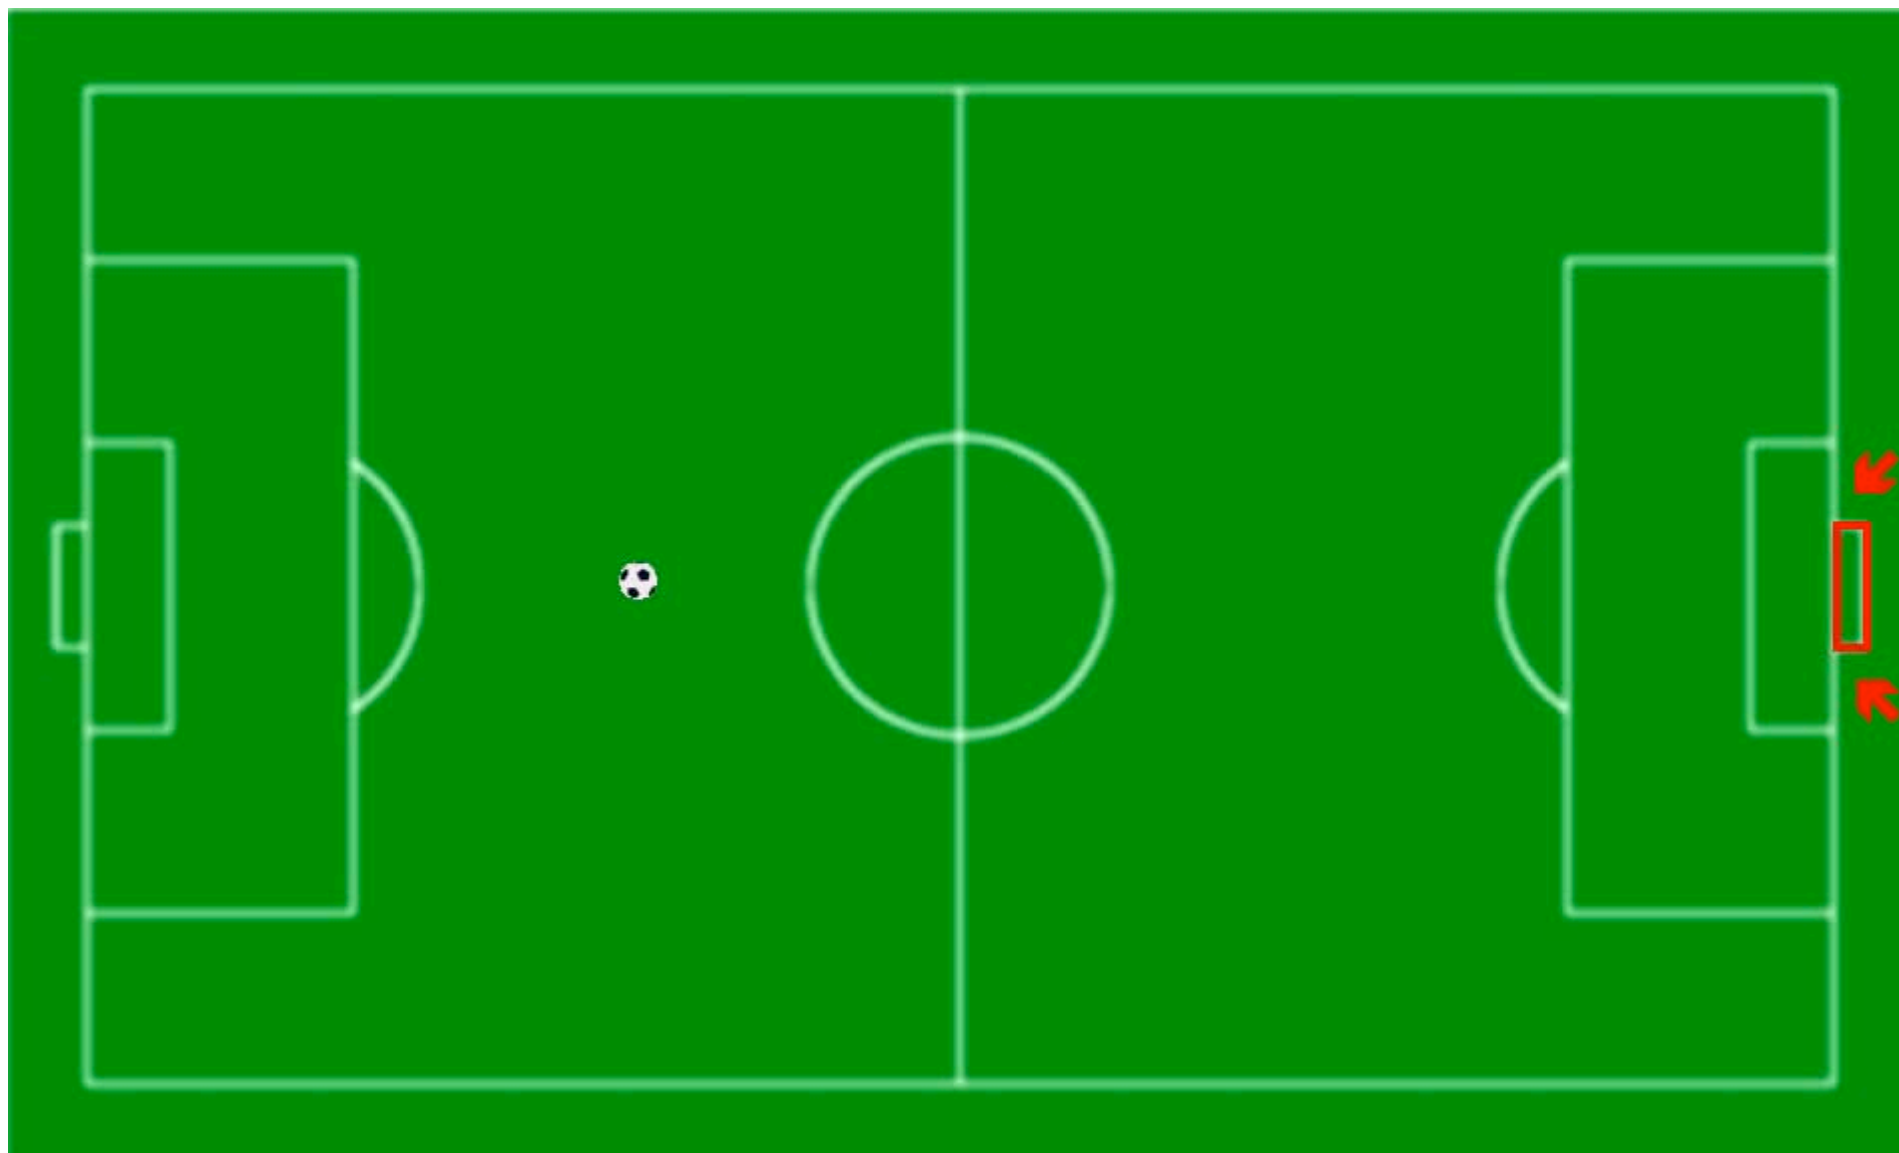

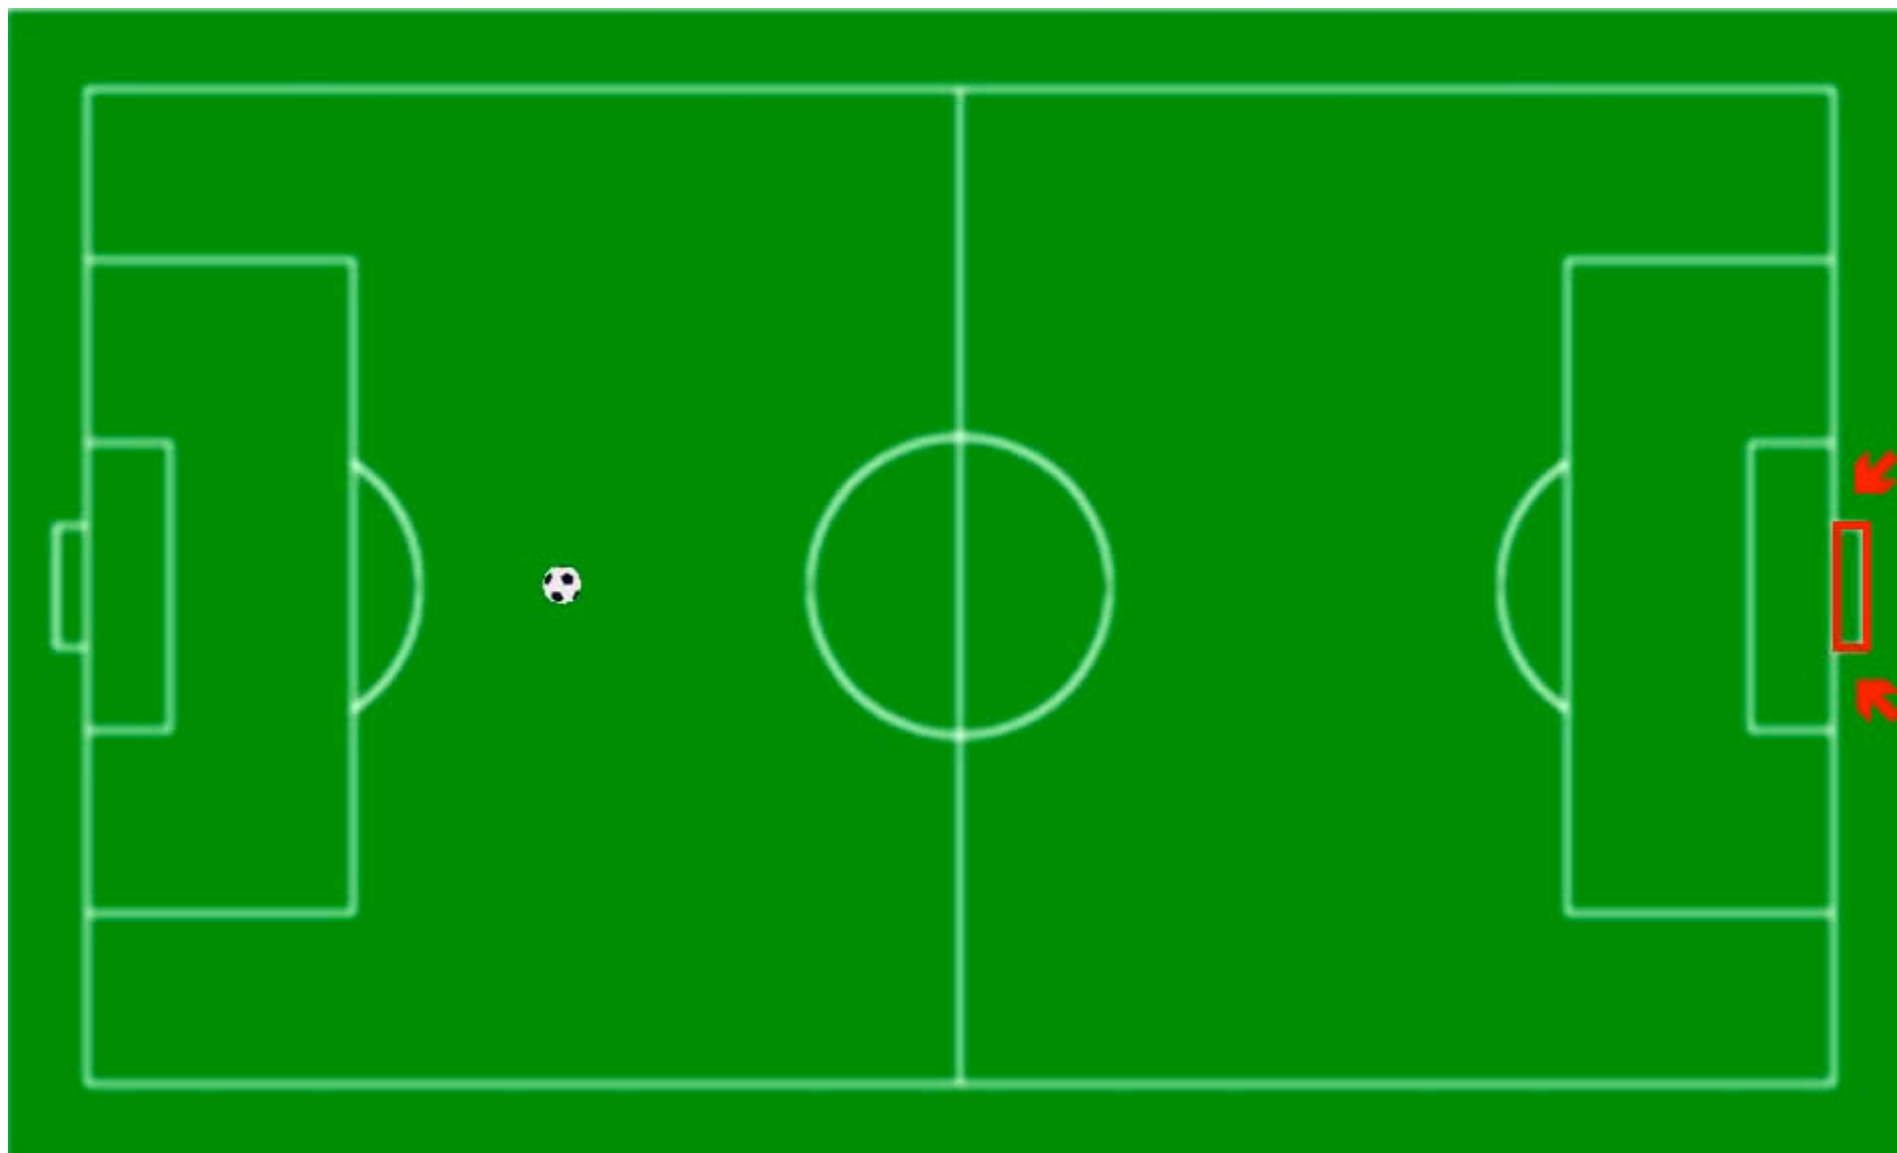

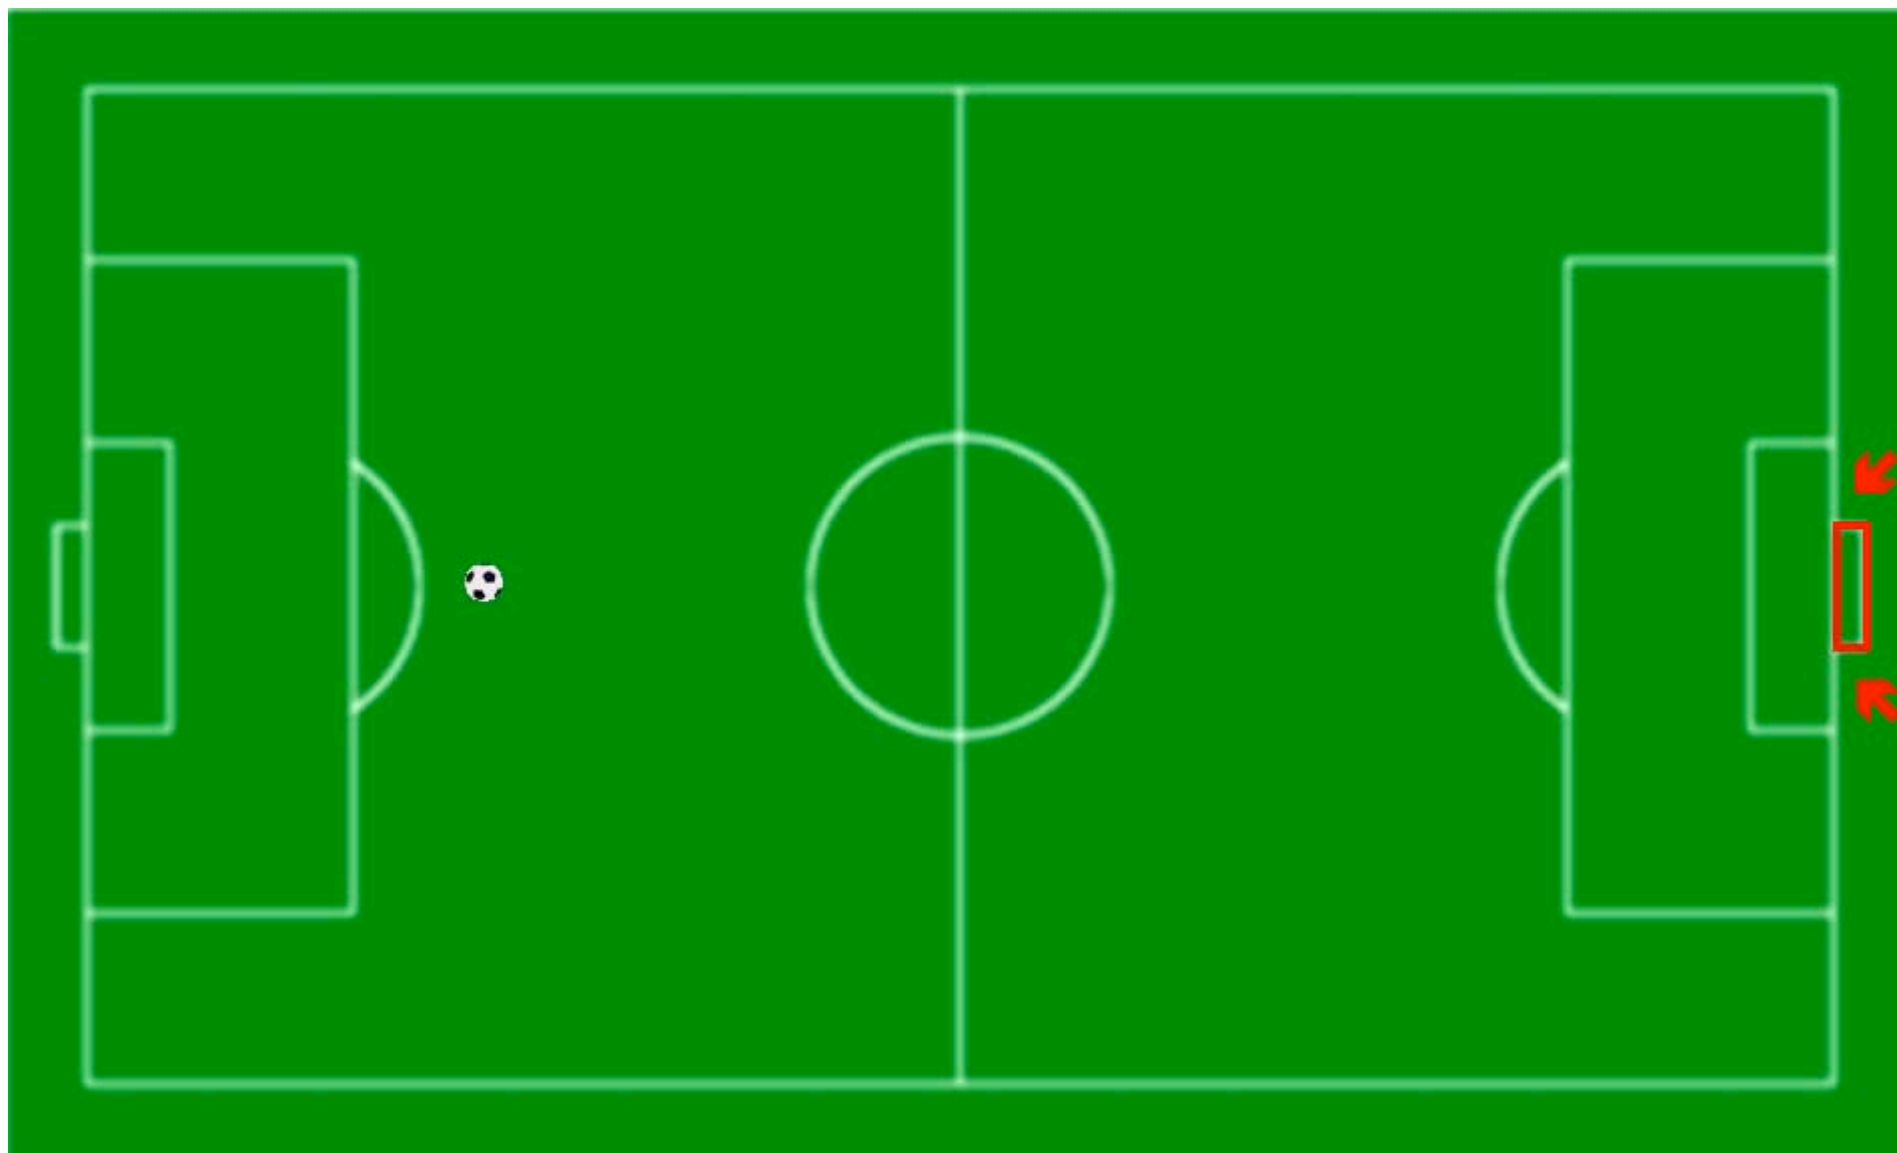

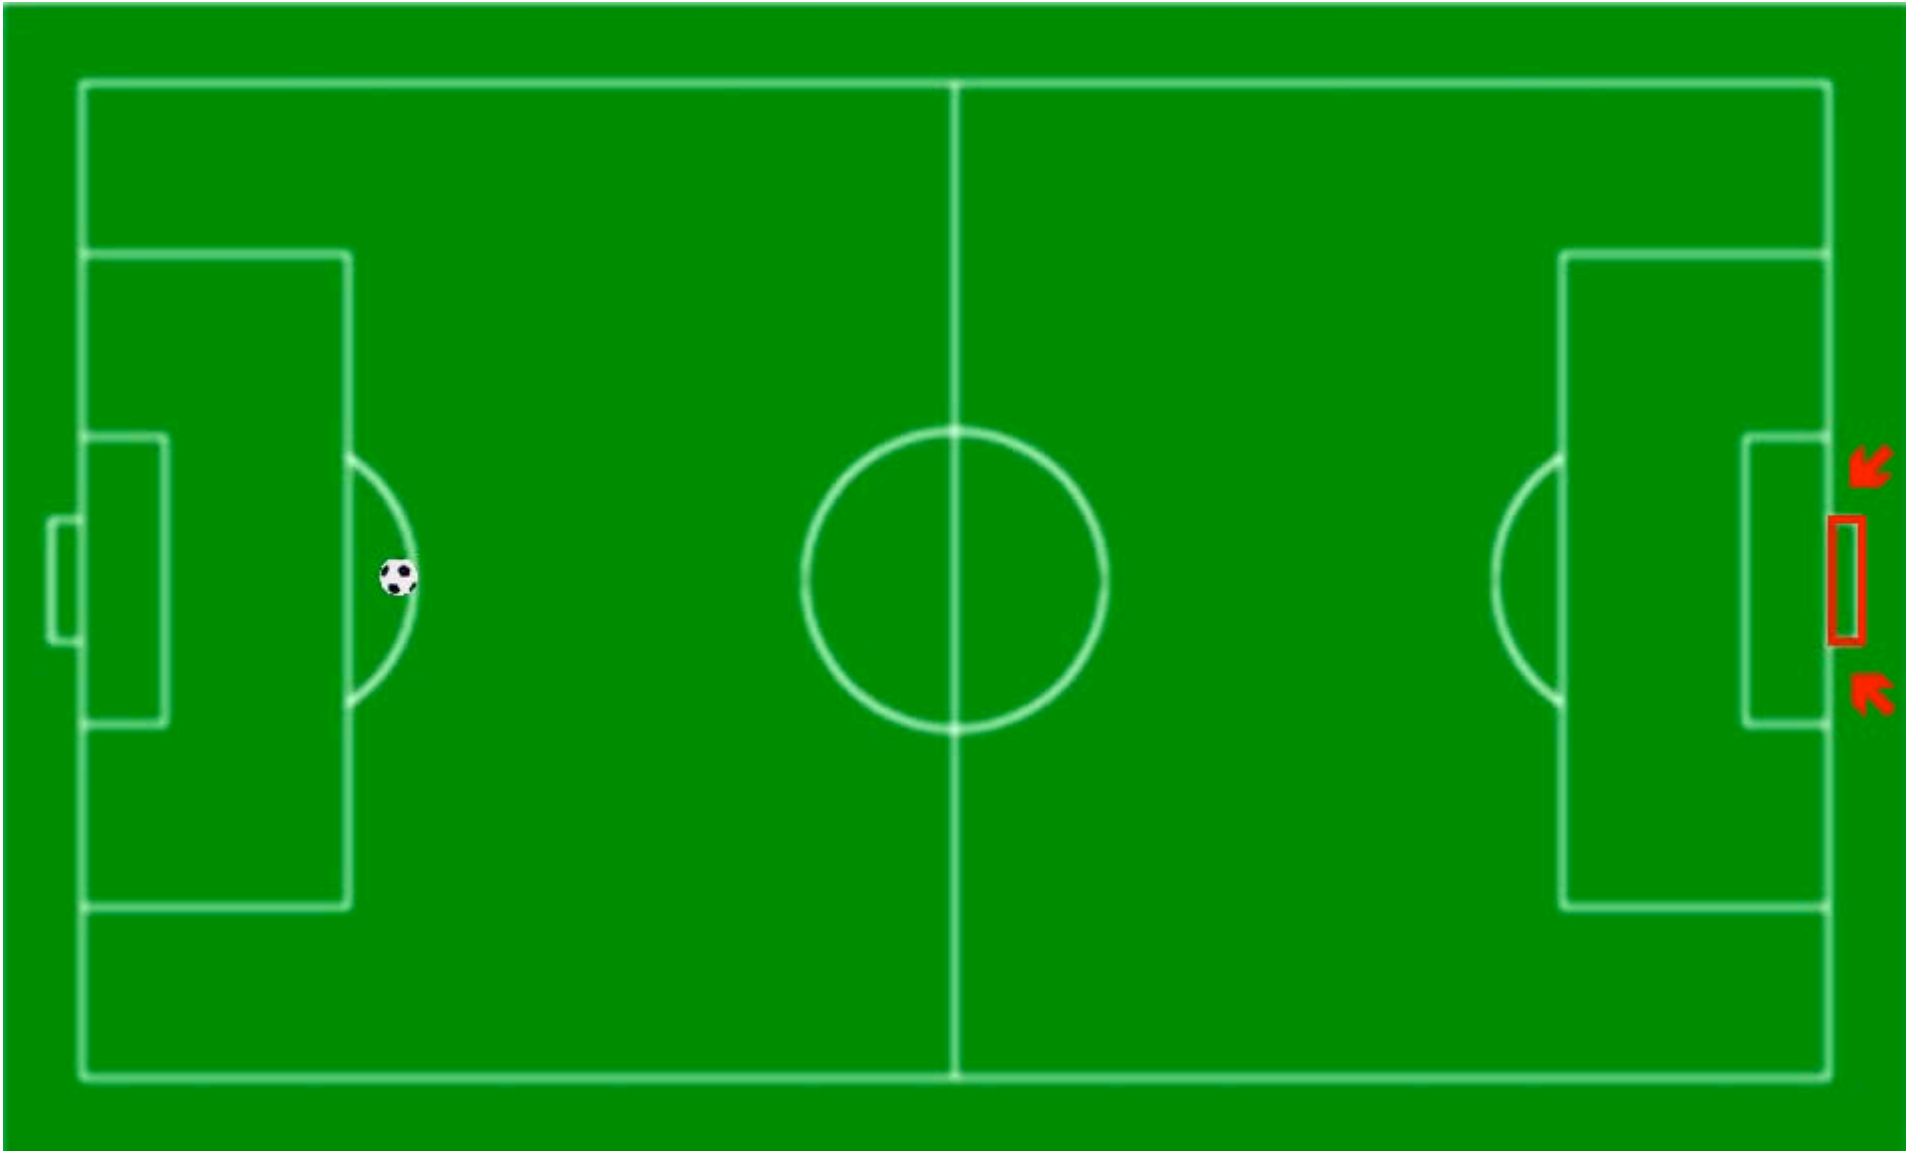

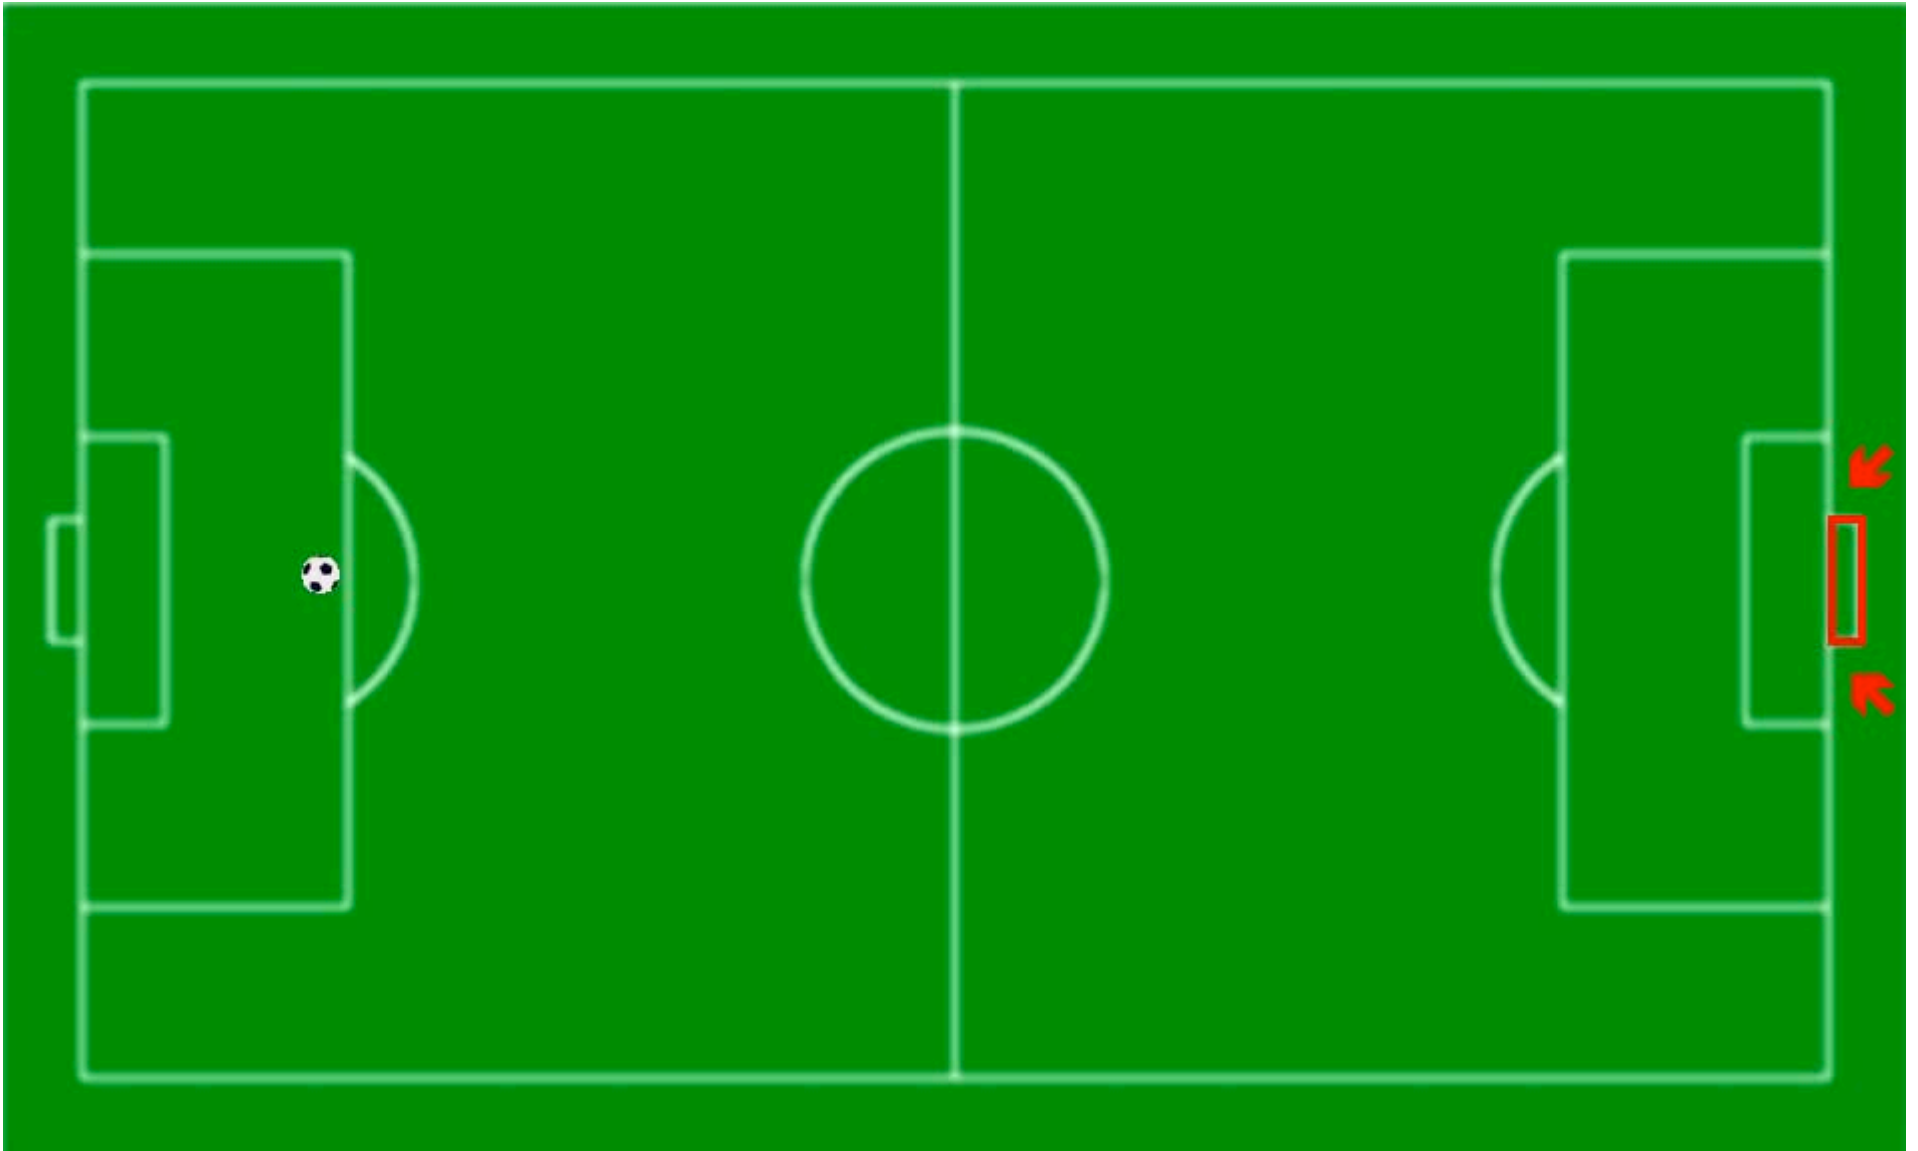

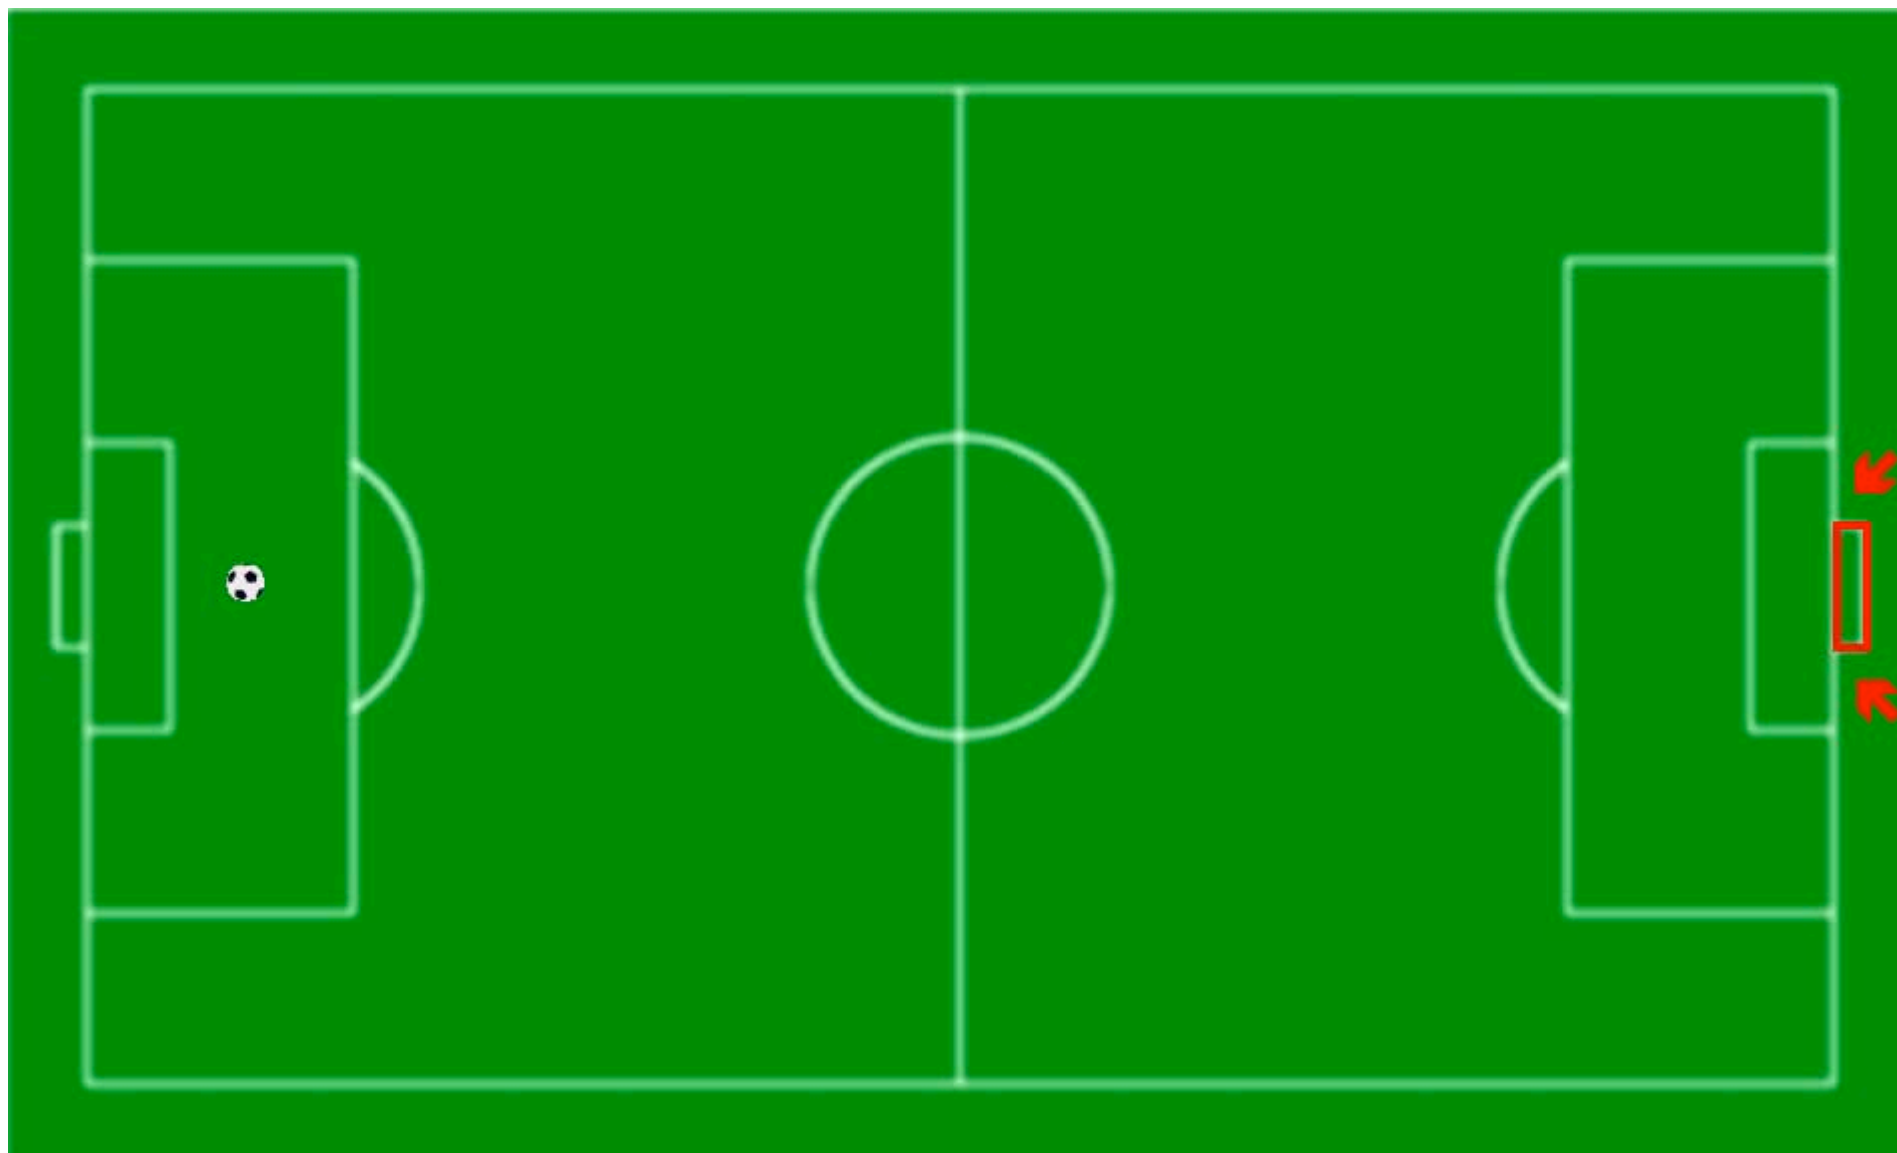

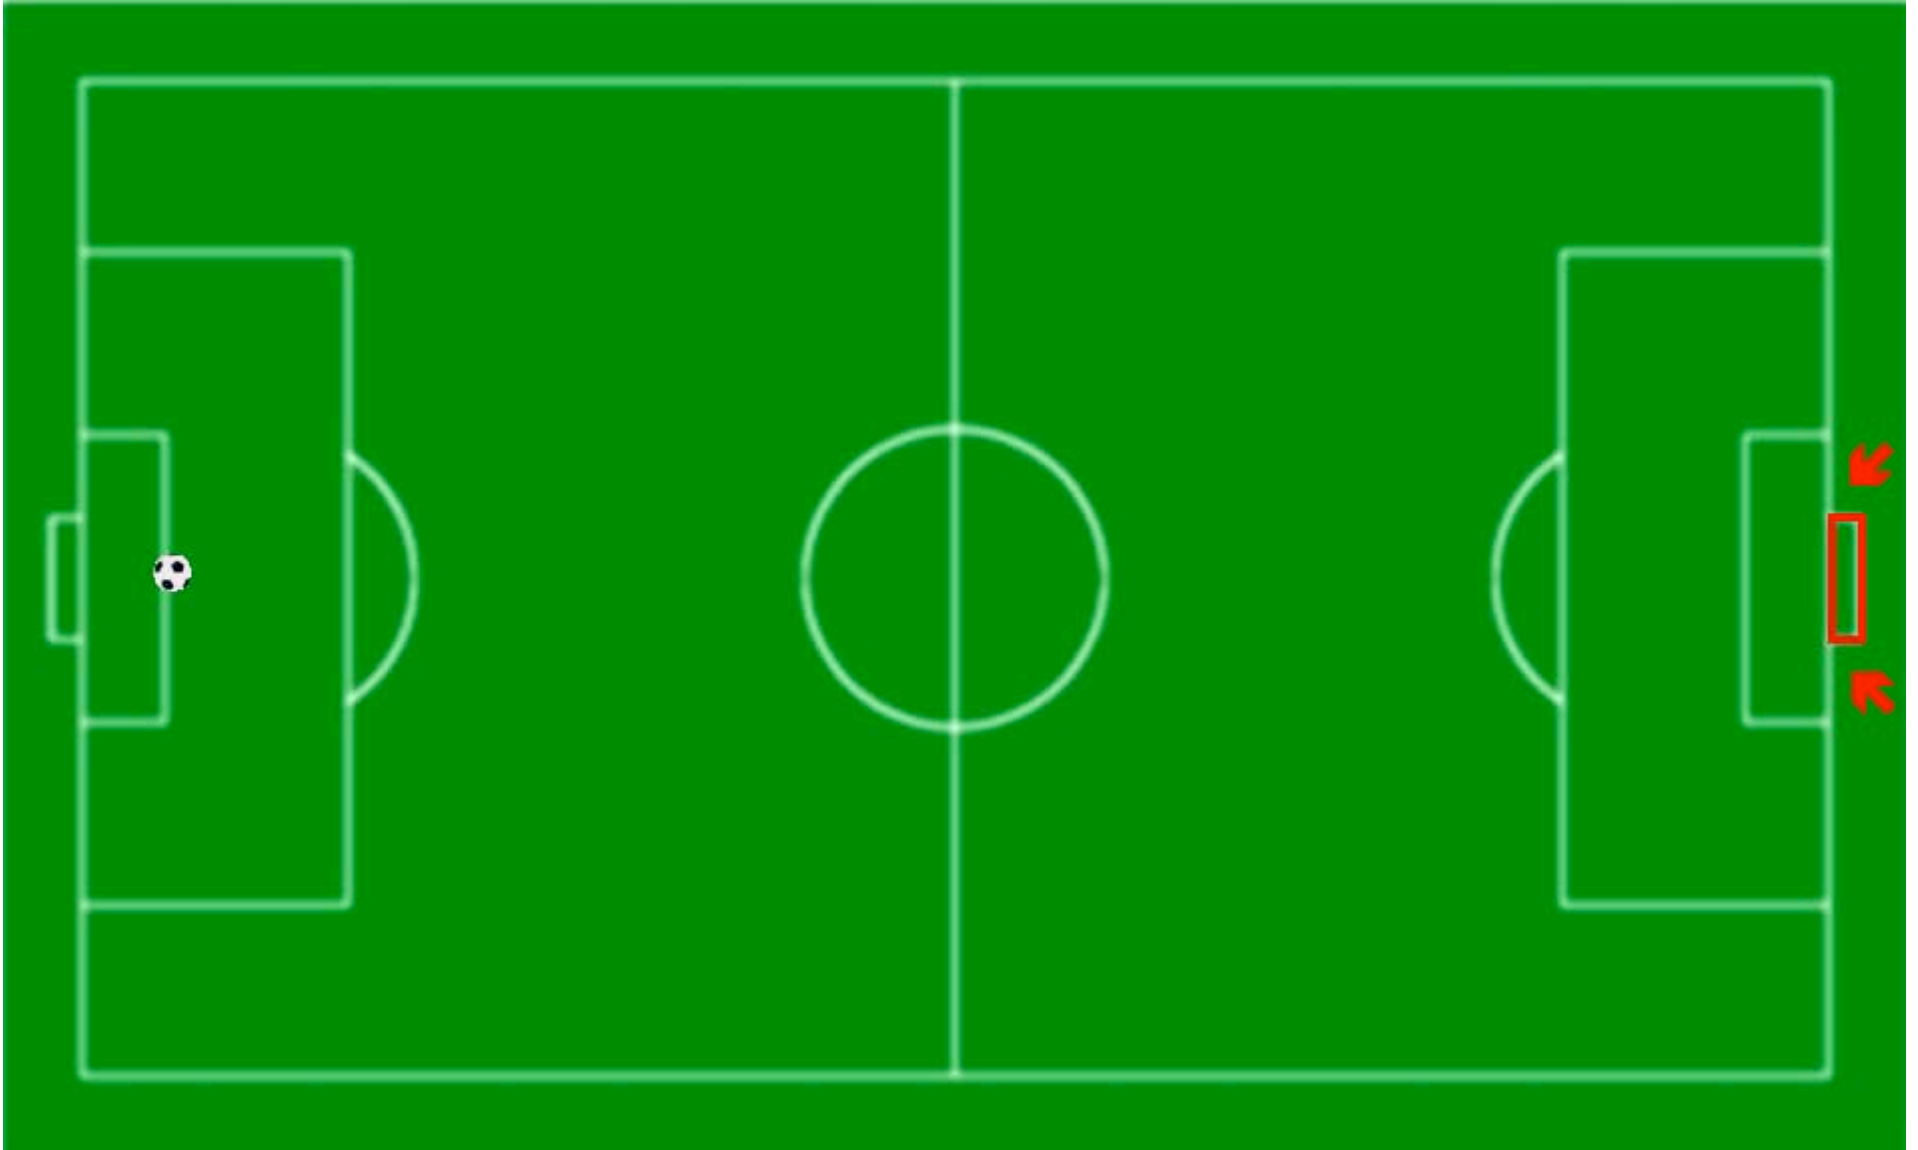

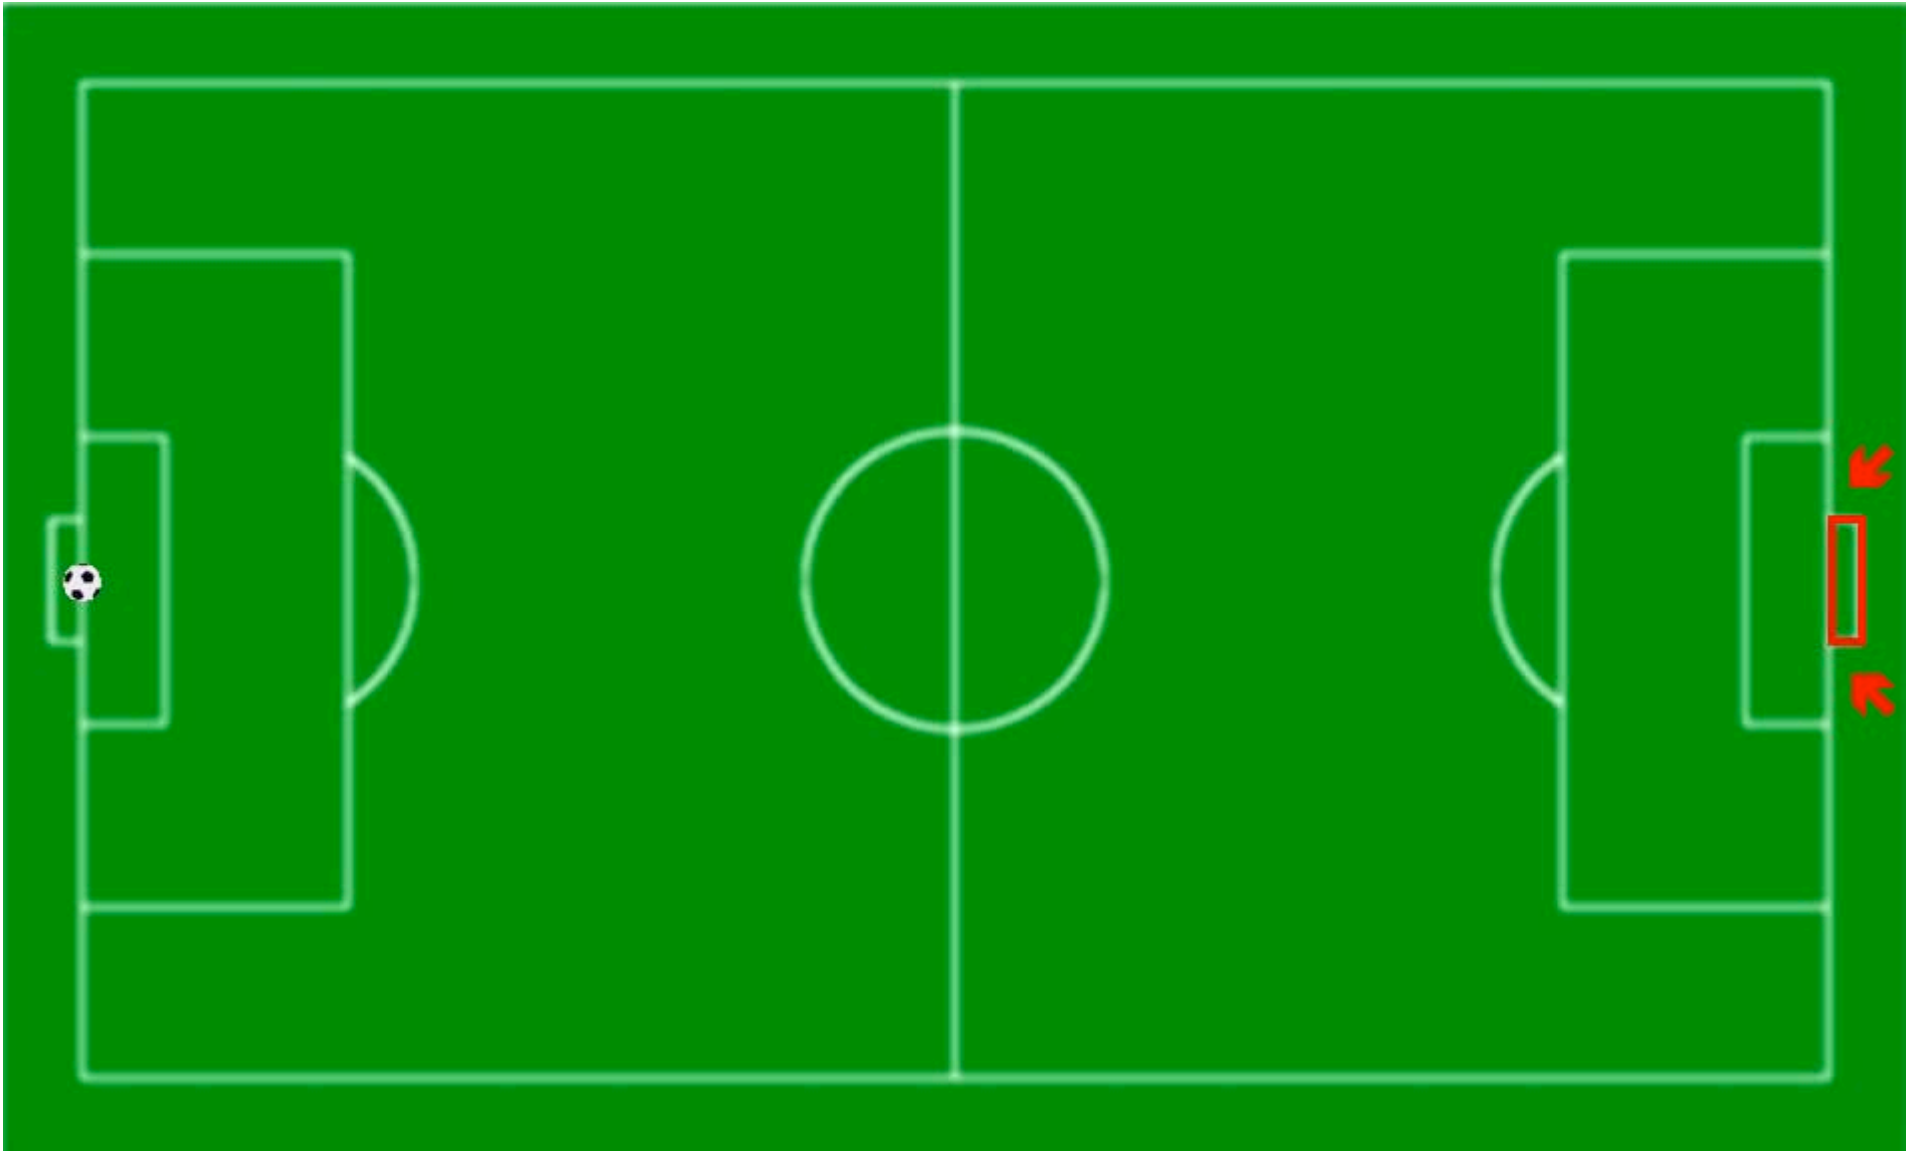

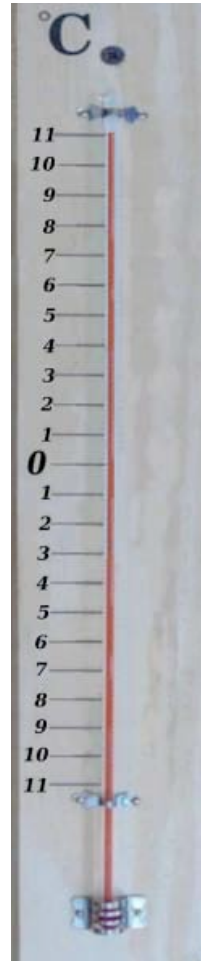

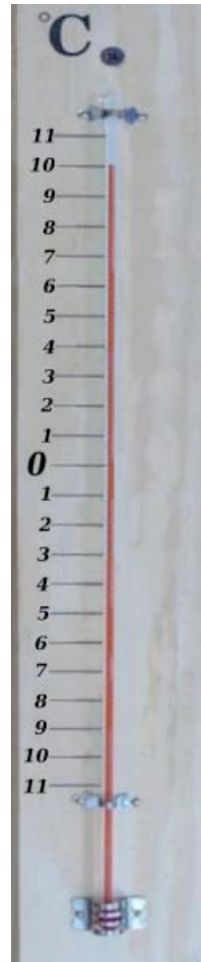

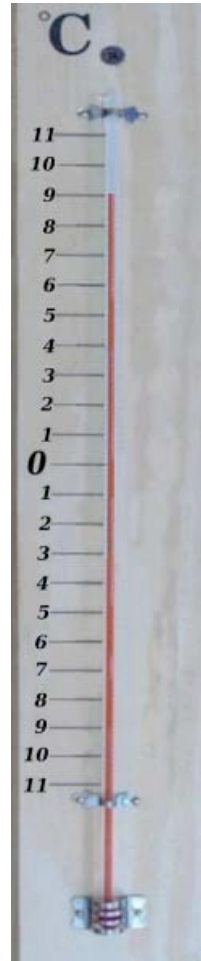

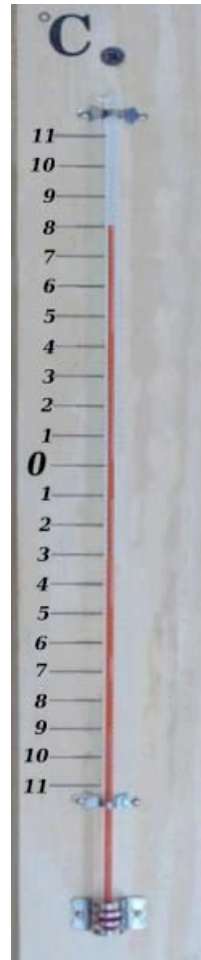

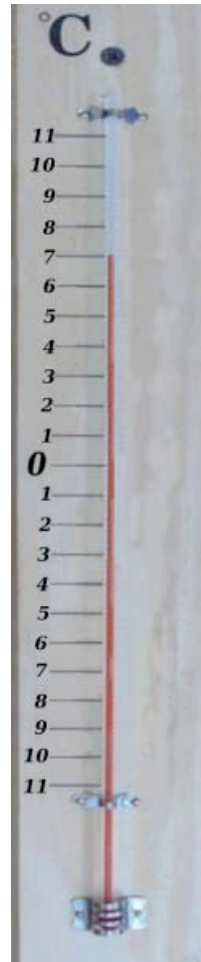

Nel termometro, il livello del mercurio è **sopra/sotto/né sopra né sotto** allo zero?

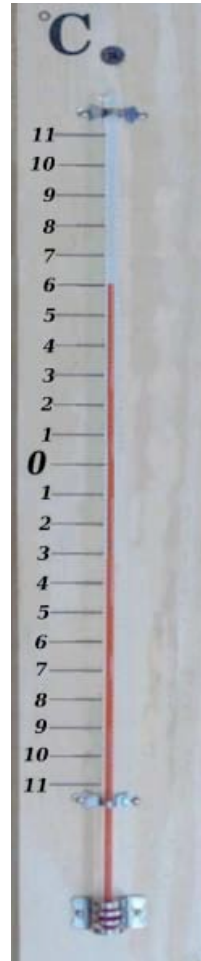

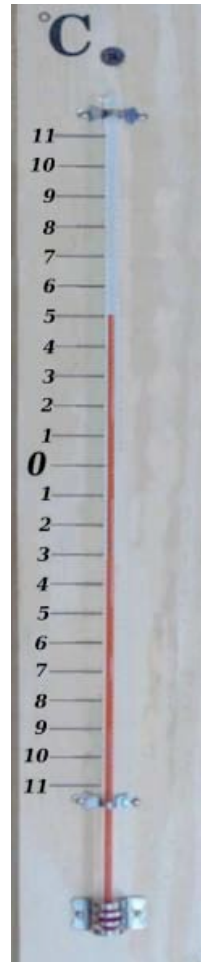

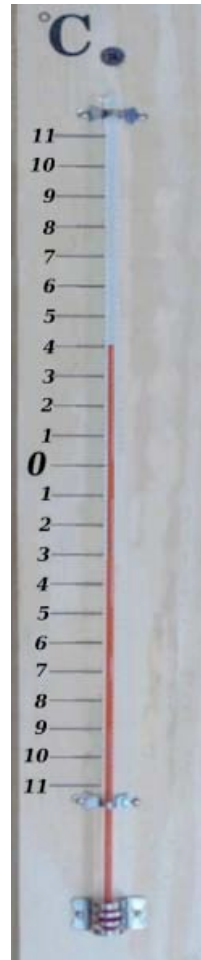

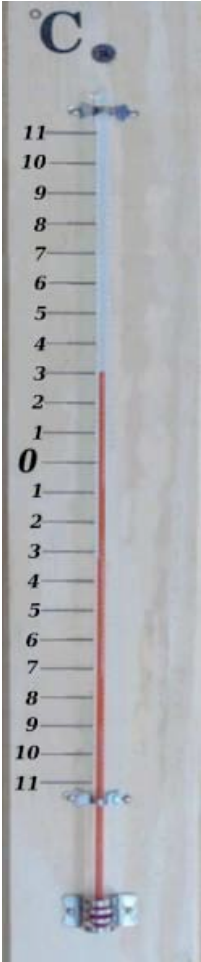

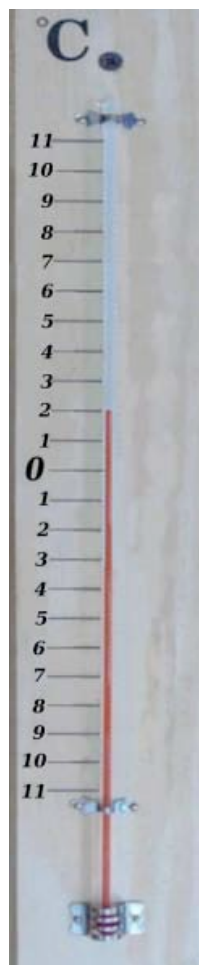

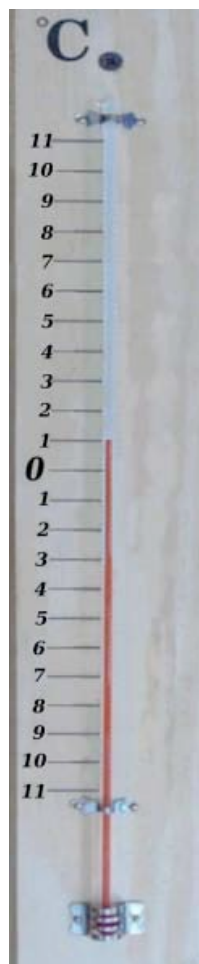

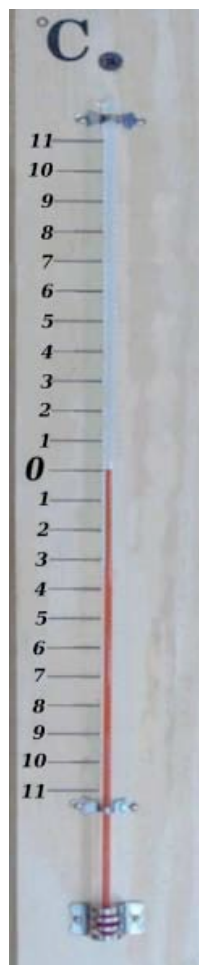

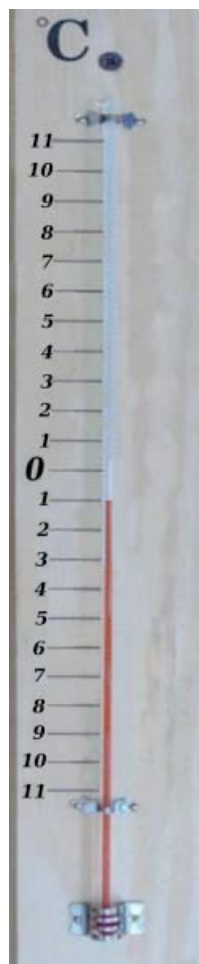

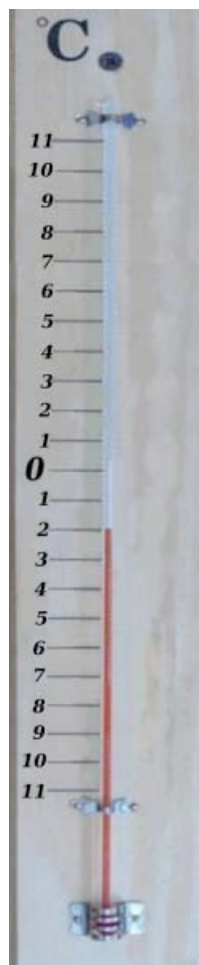

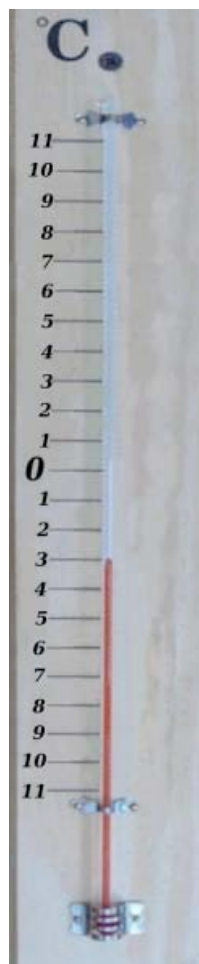

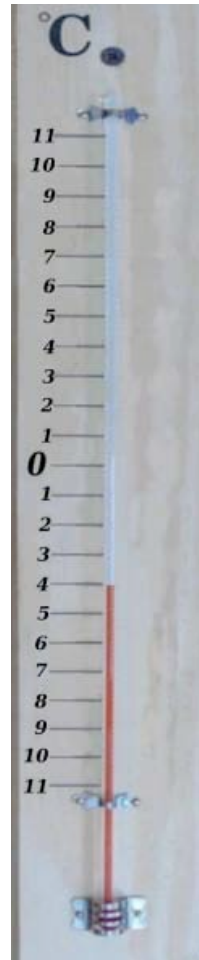

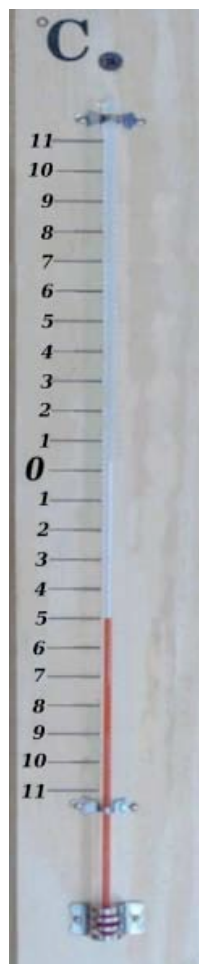

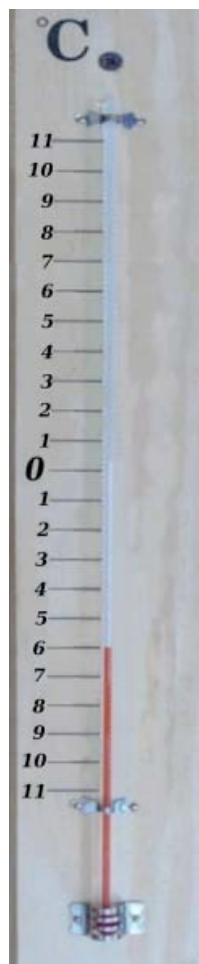

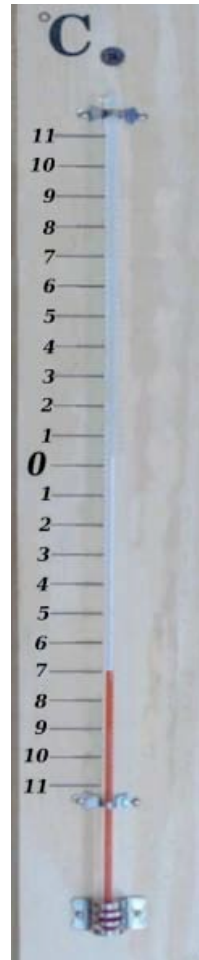

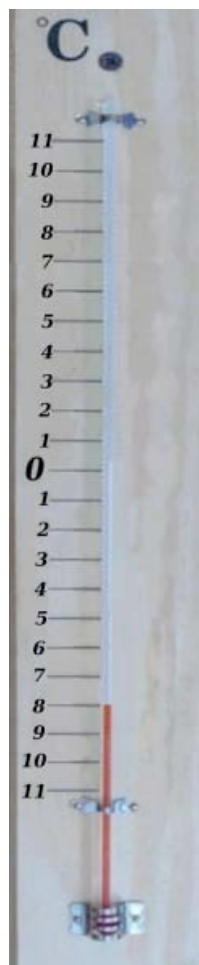

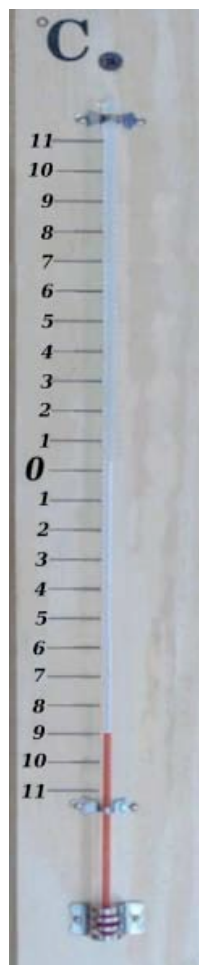

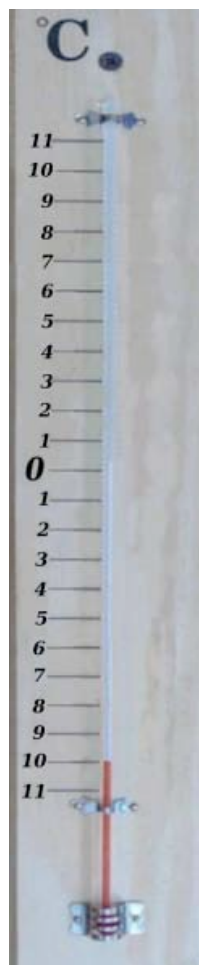

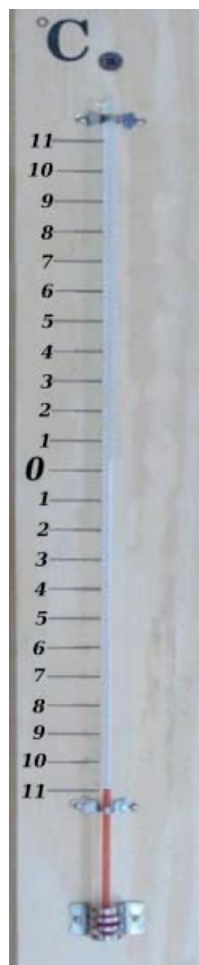

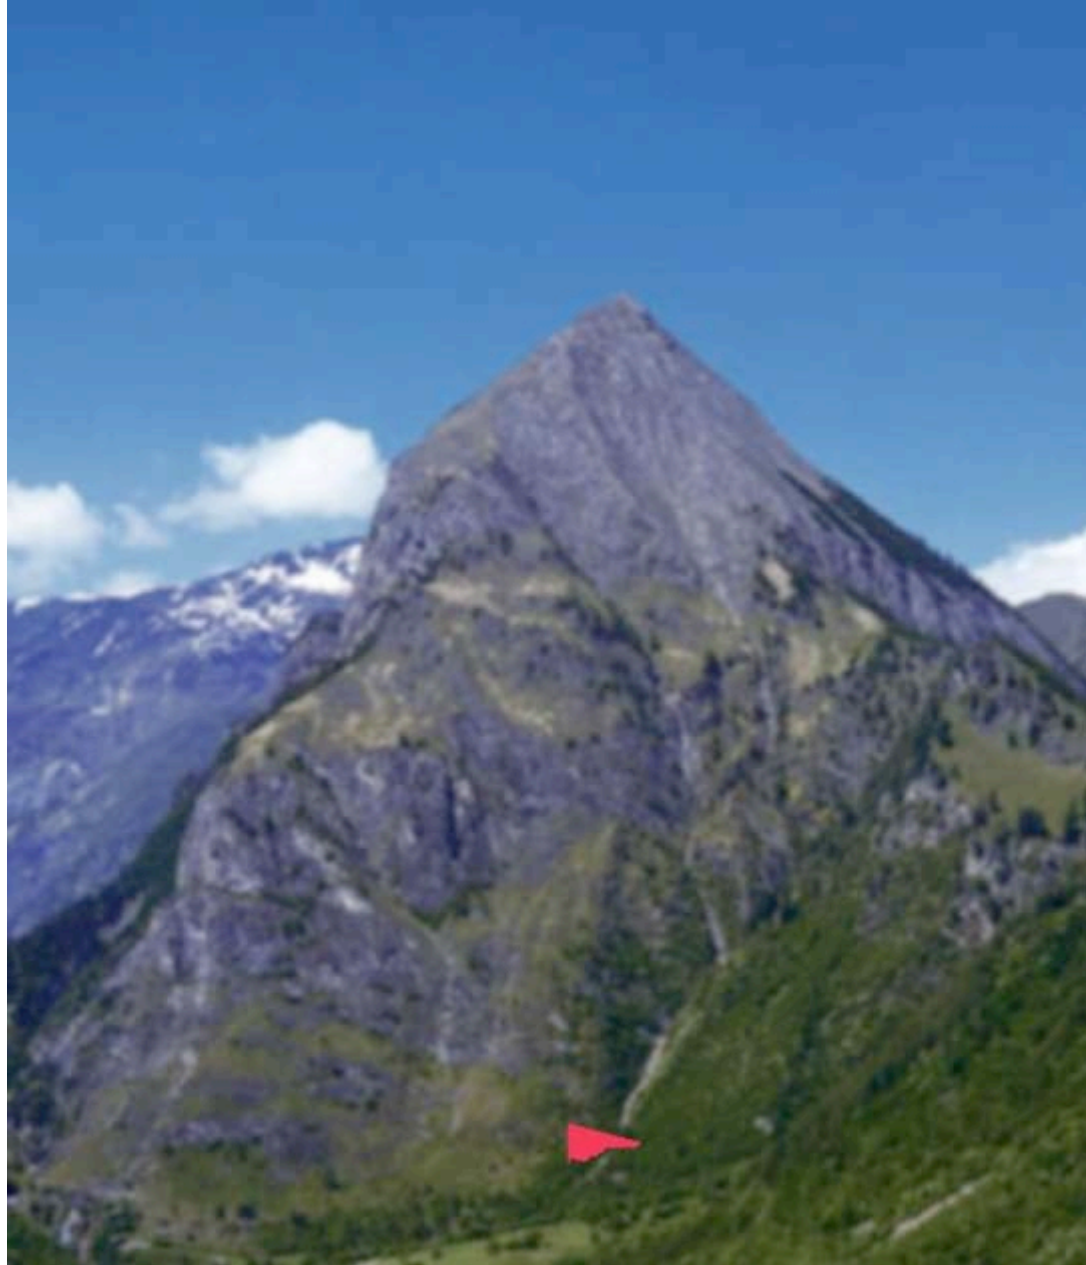

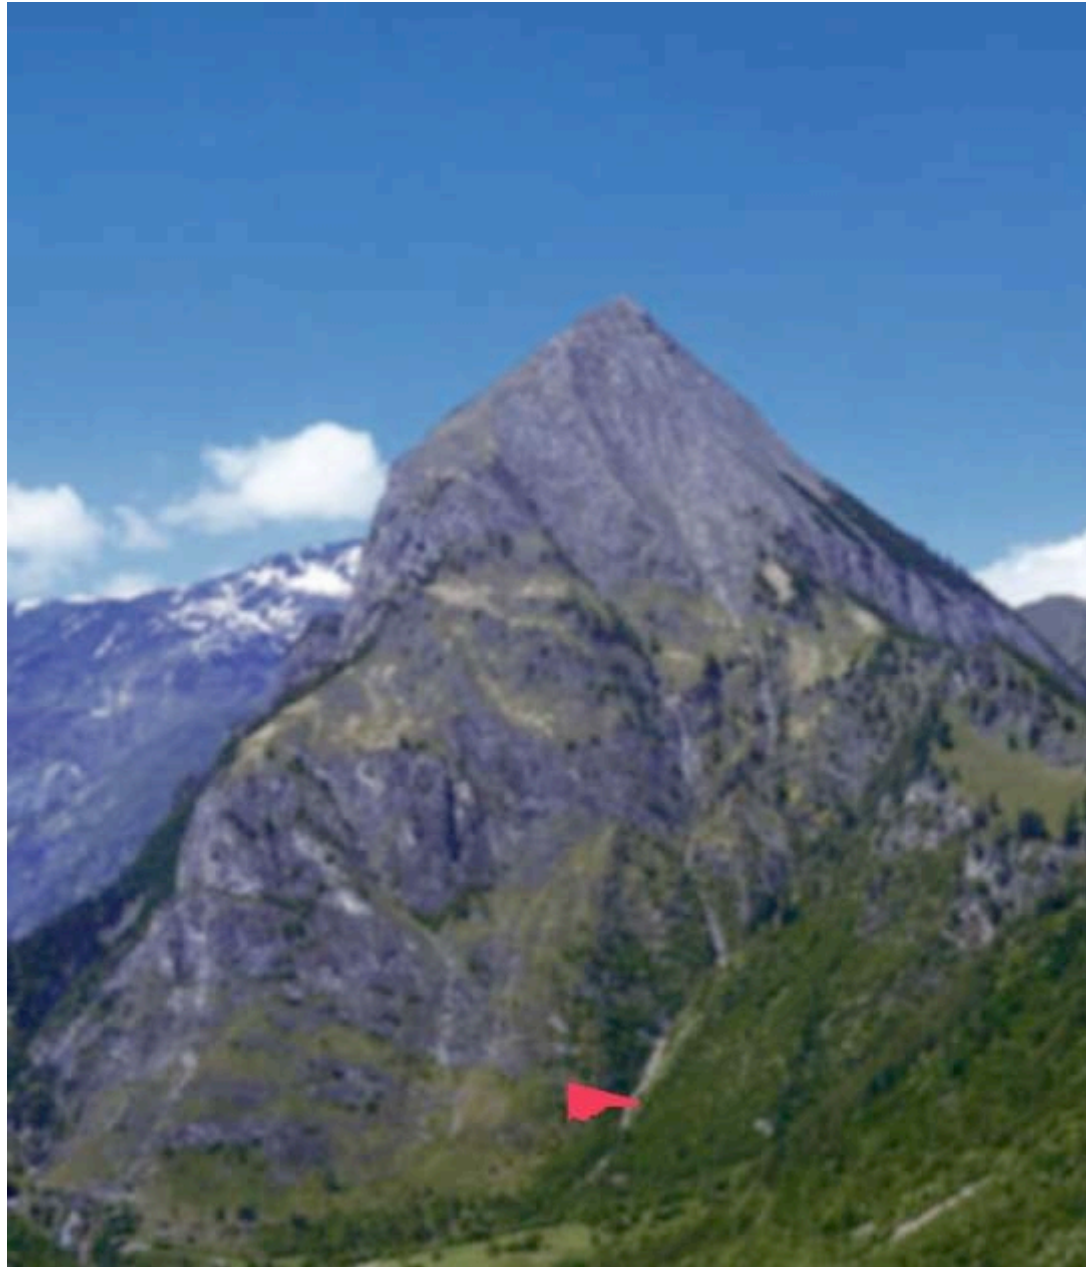

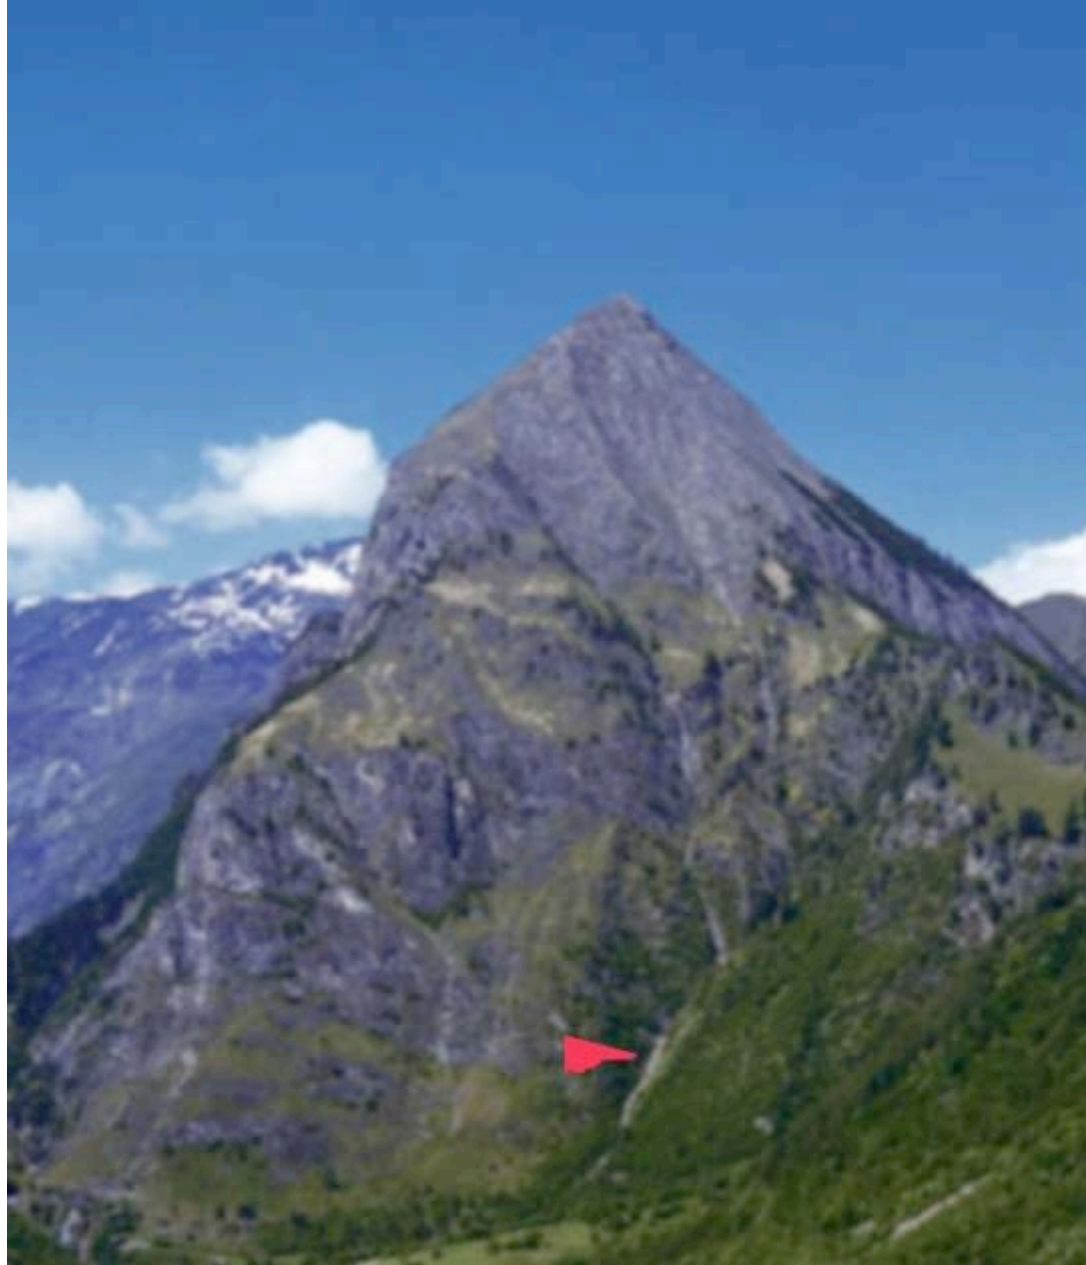

La bandierina rossa è **in cima/in fondo/né in cima né in fondo** alla montagna ?

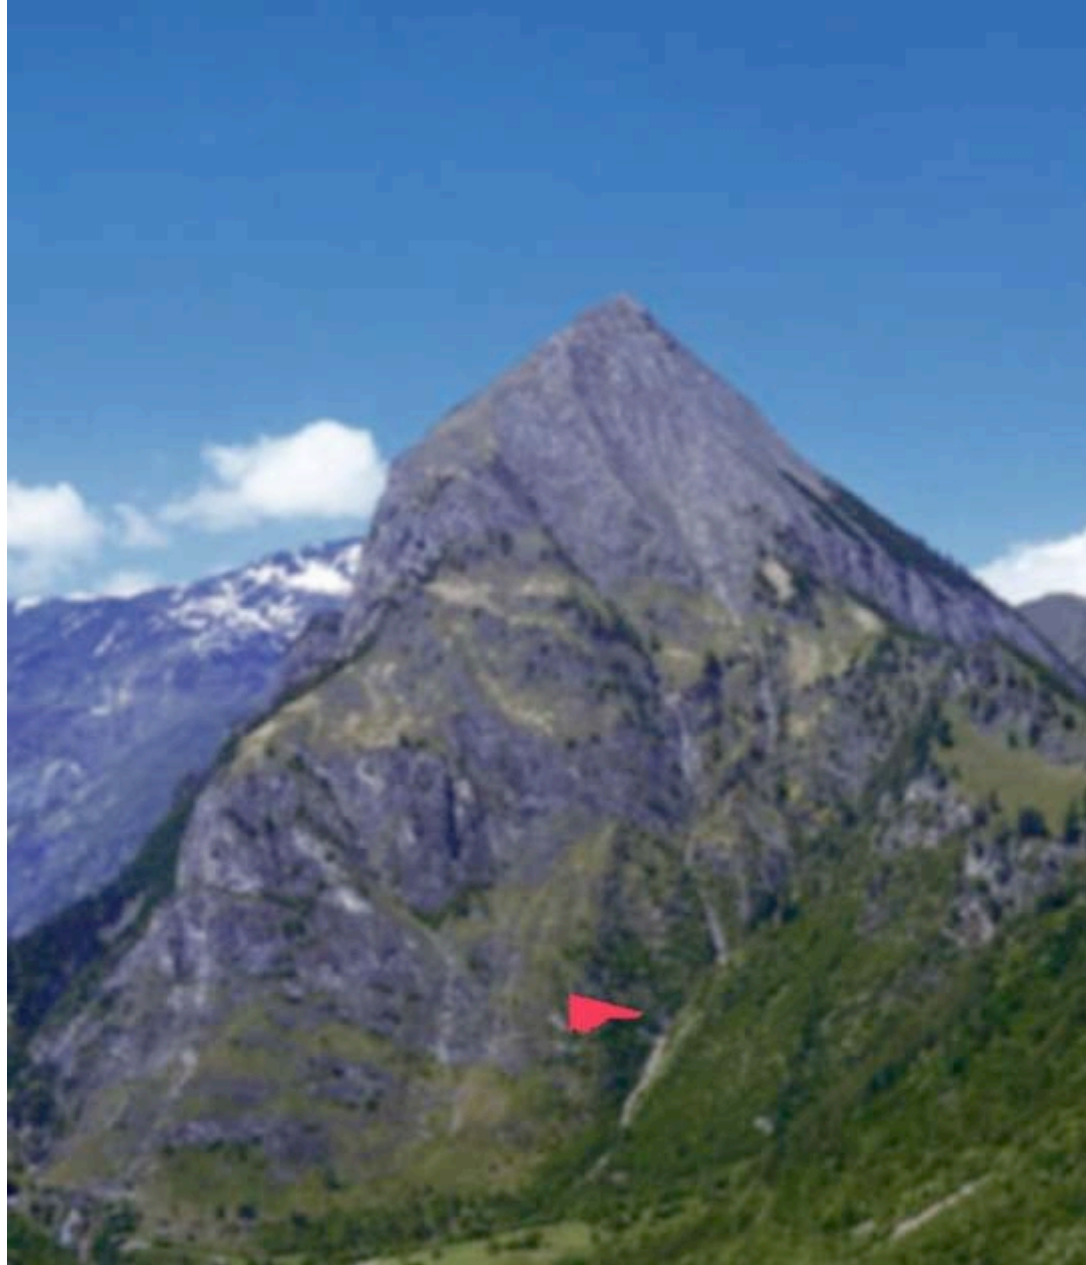

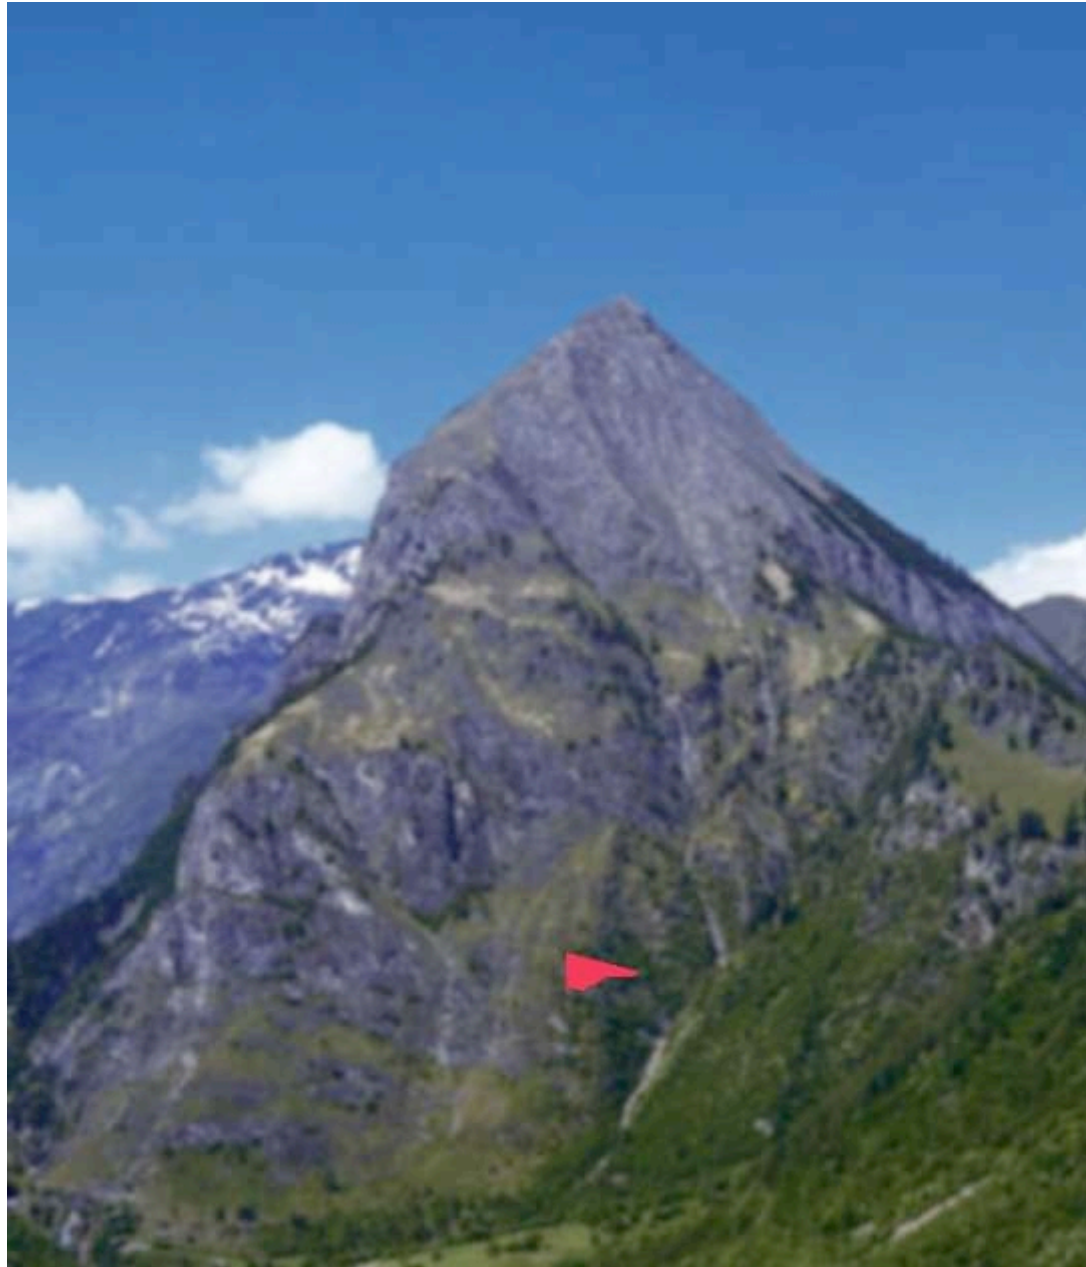

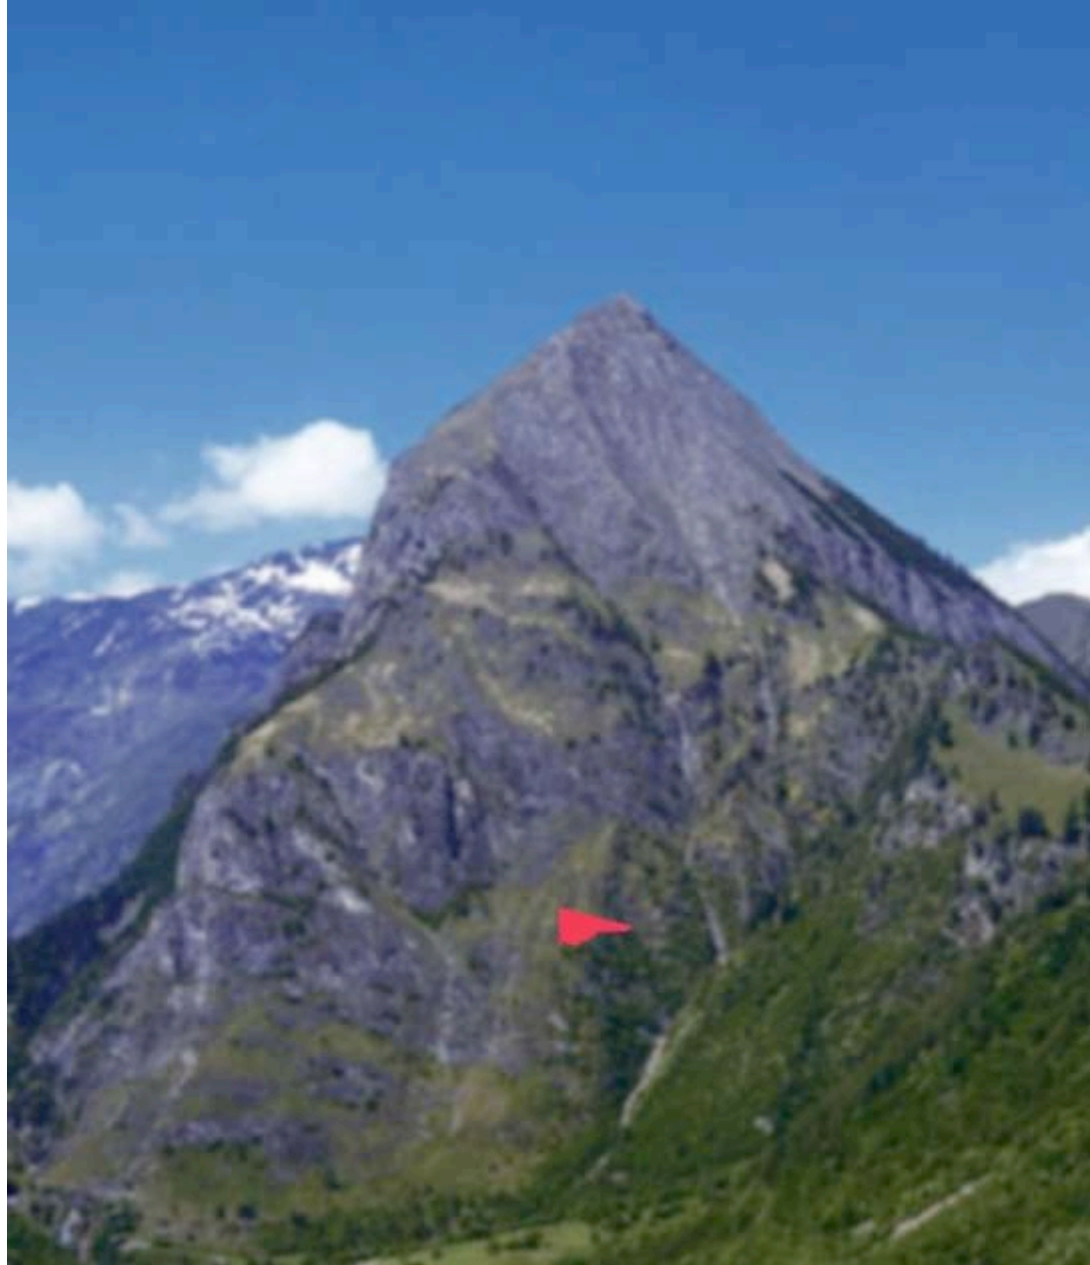

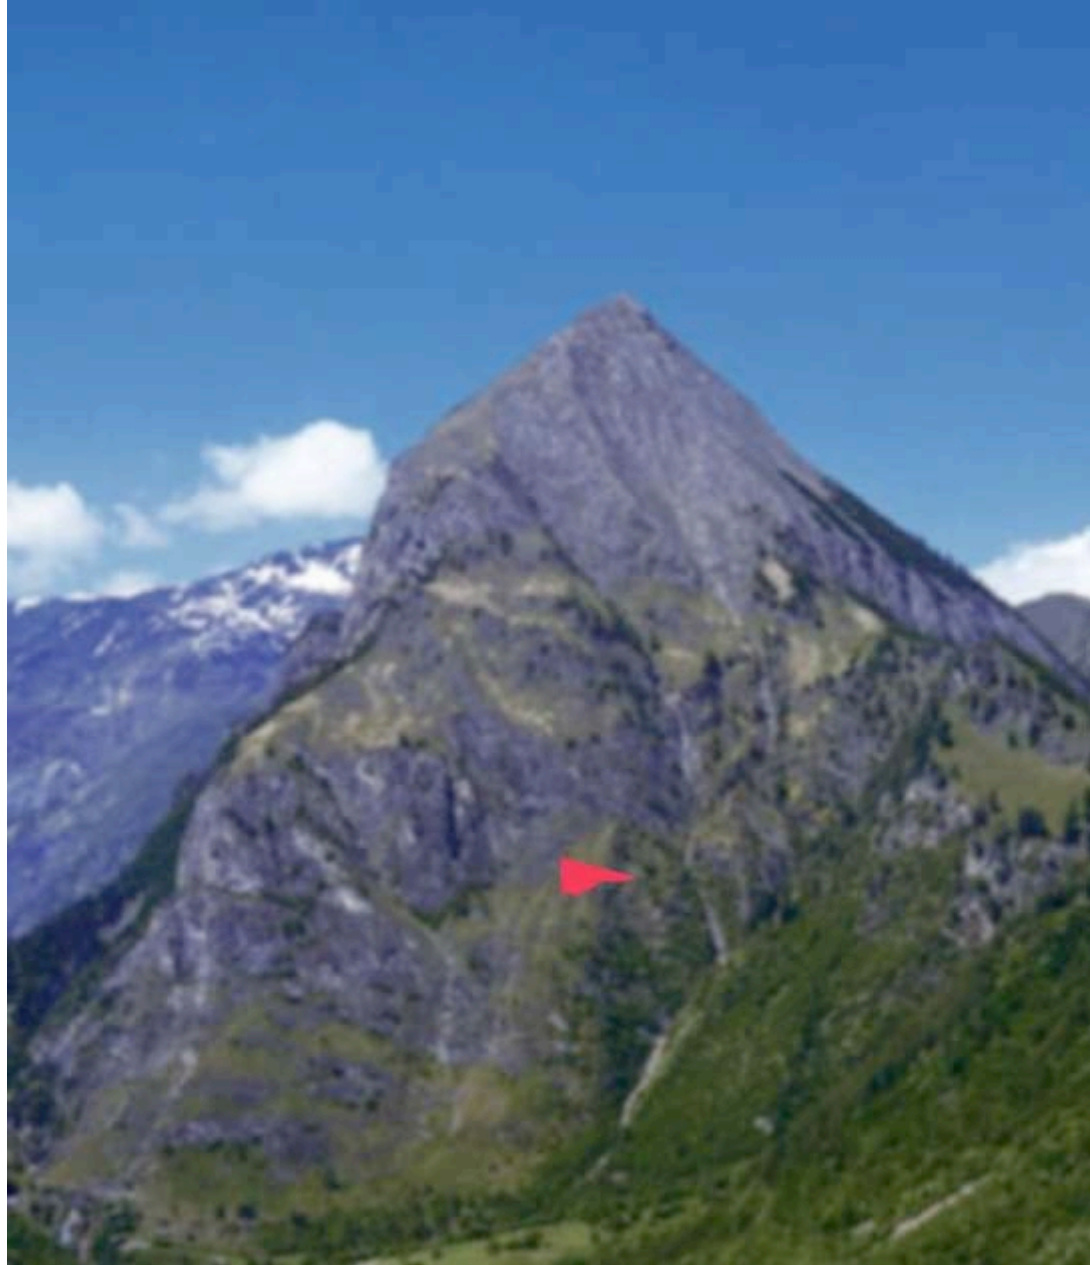

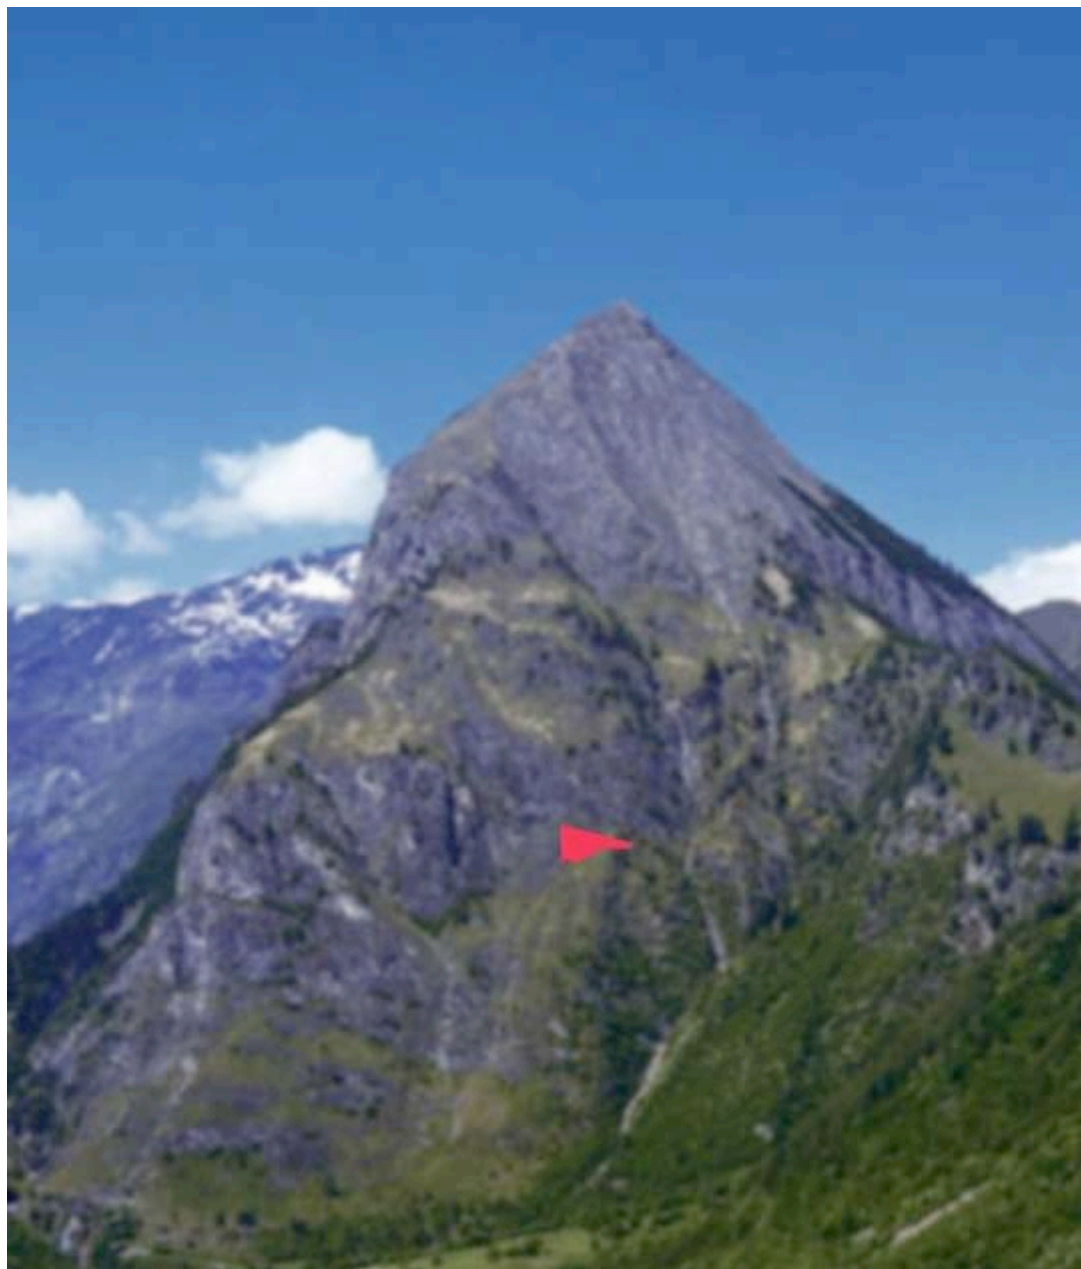

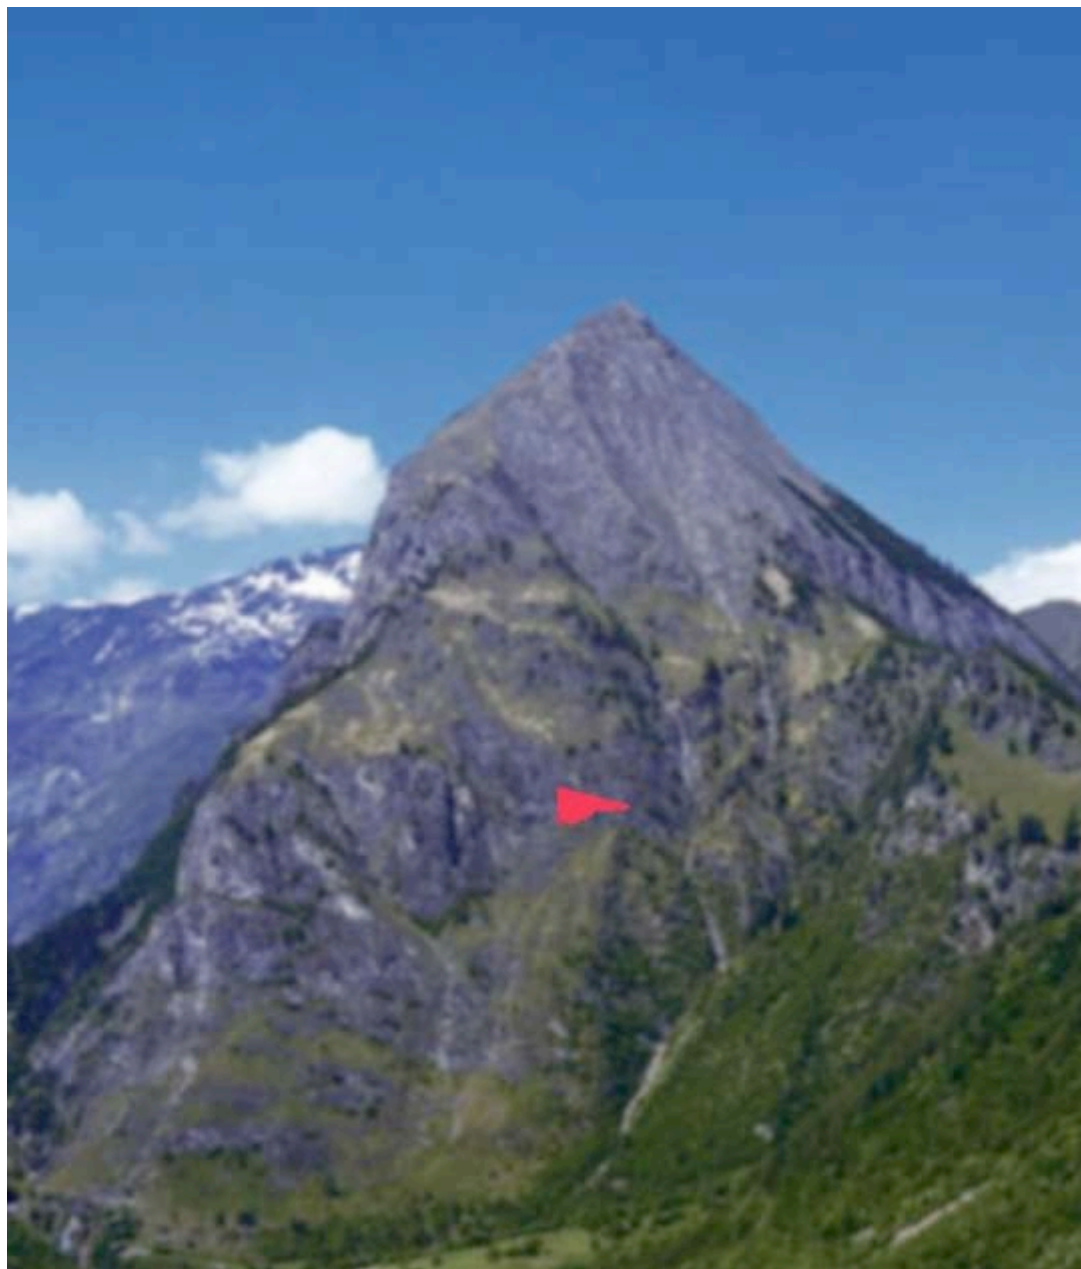

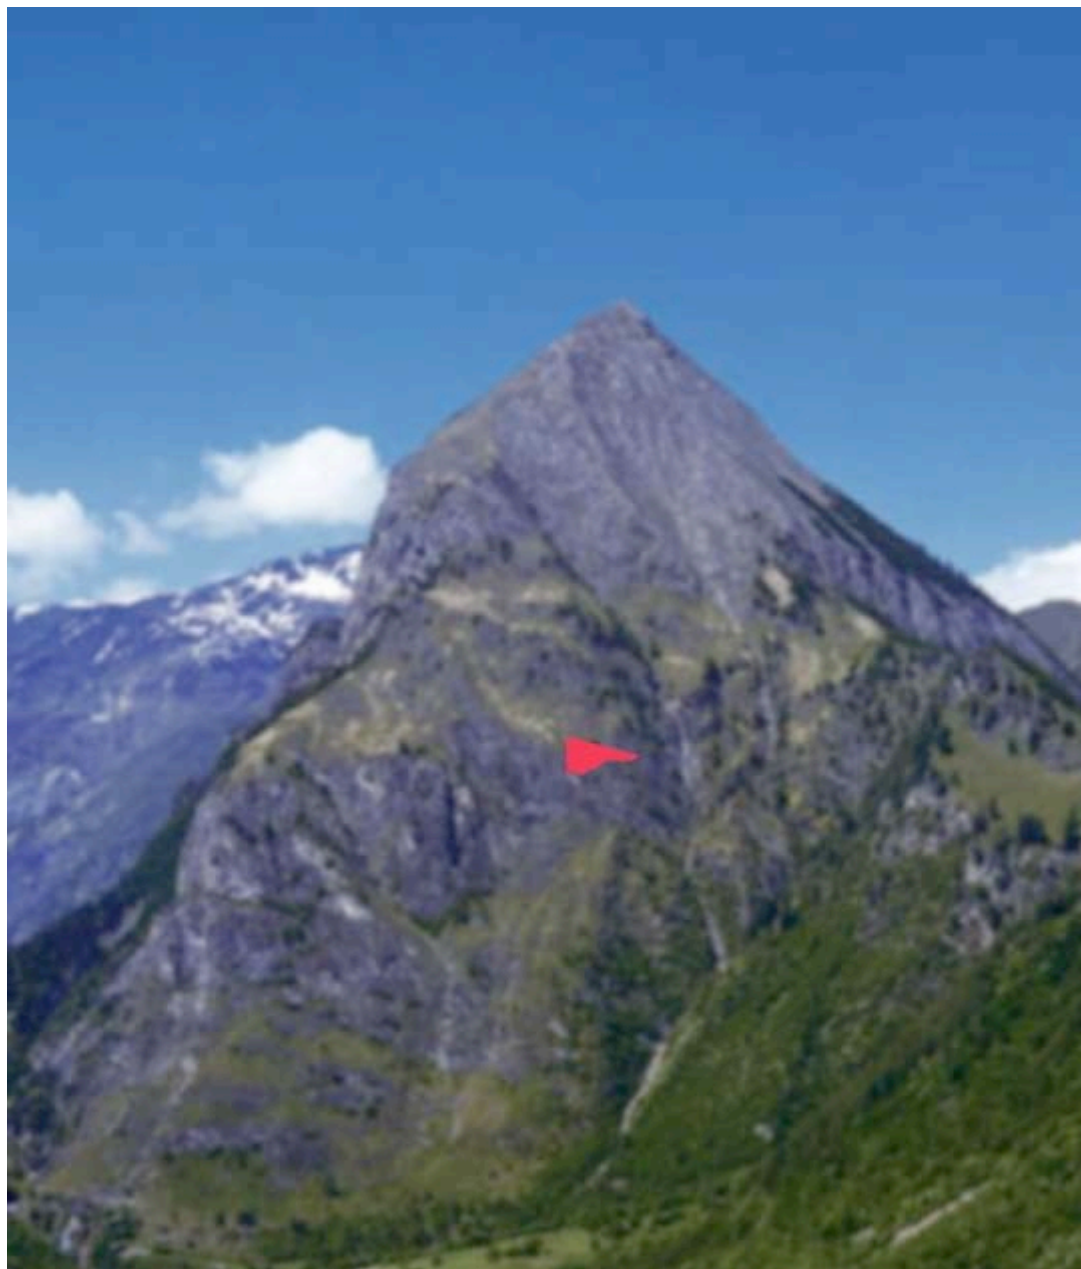

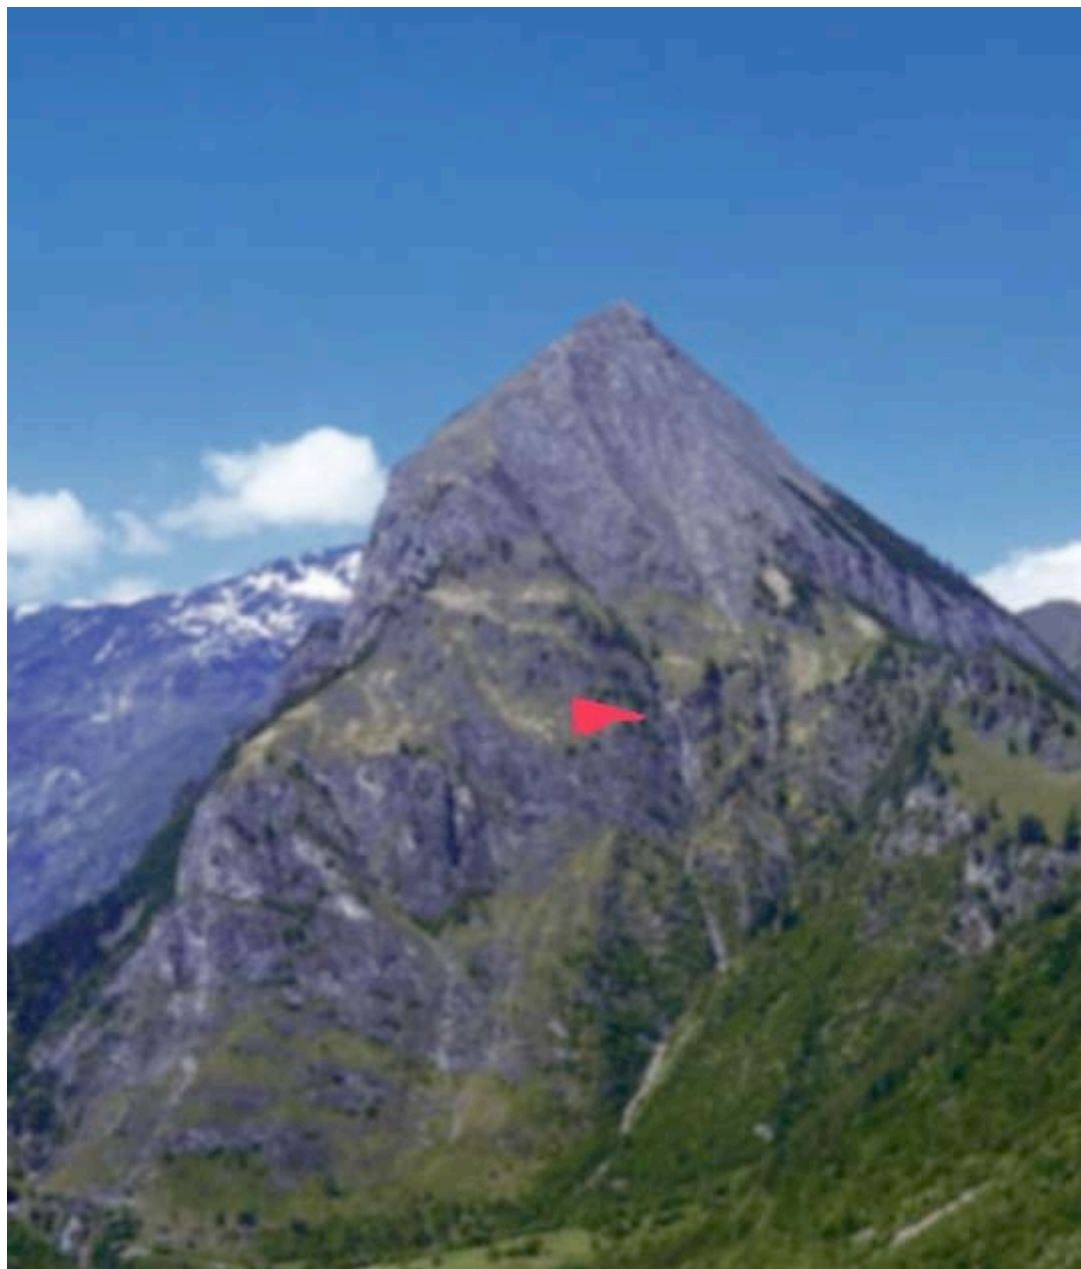

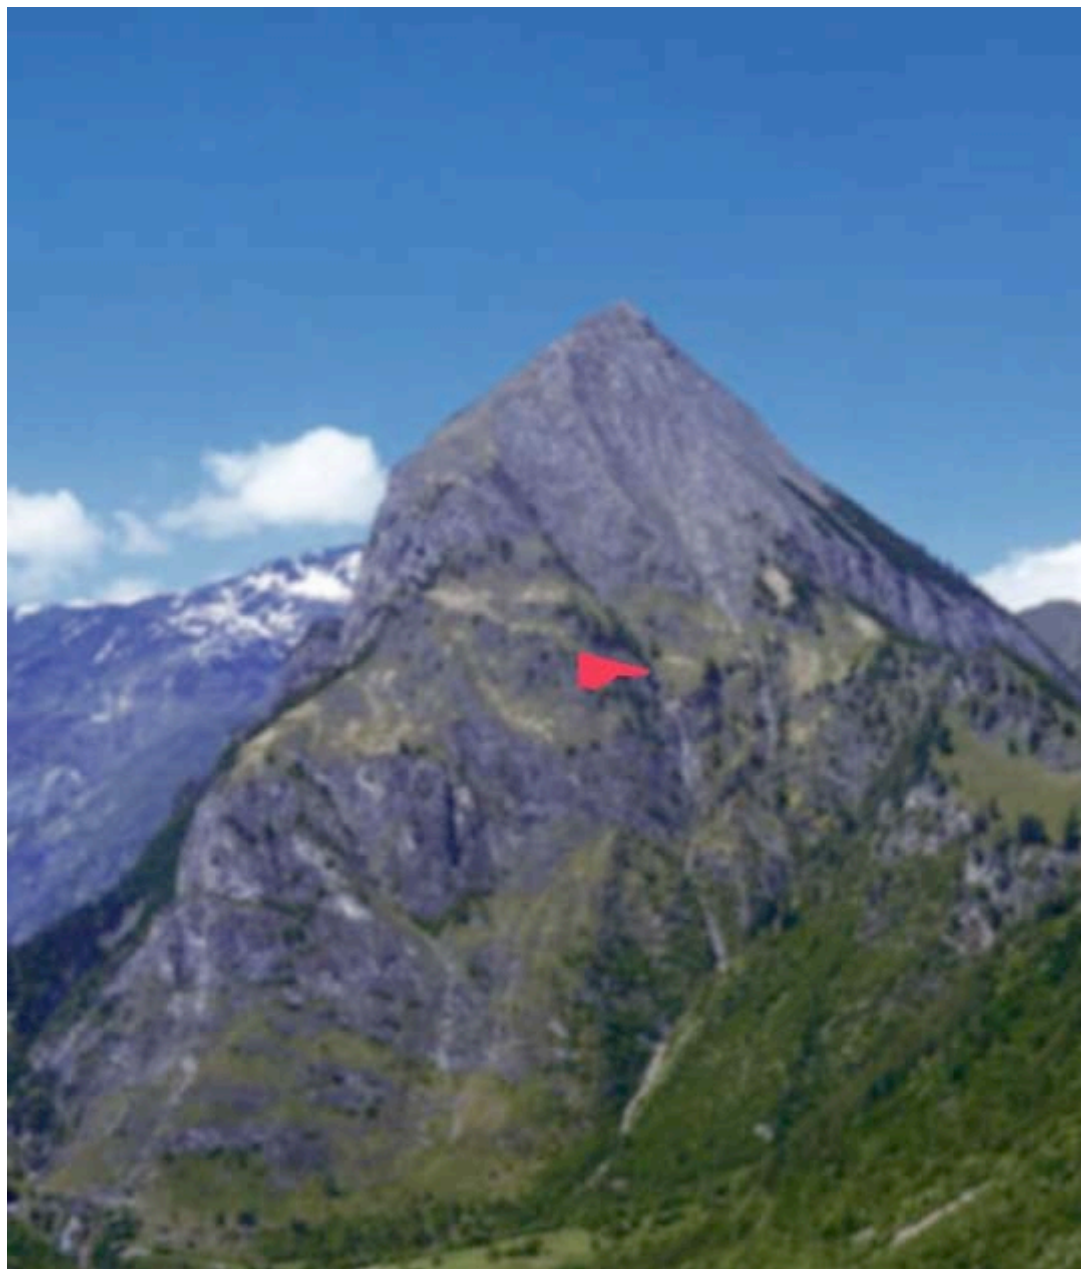

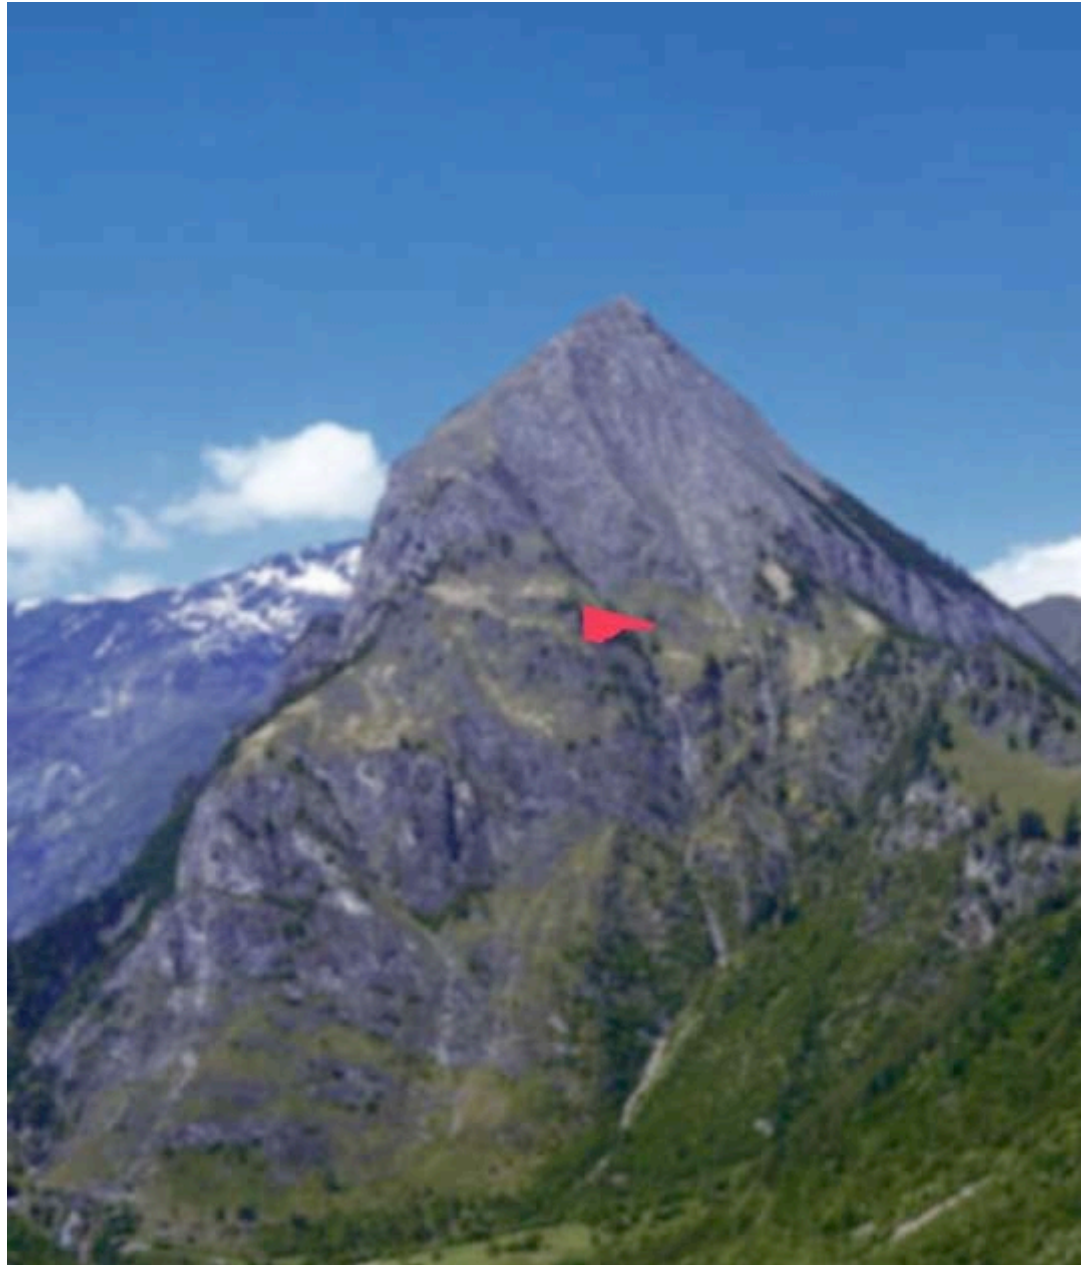

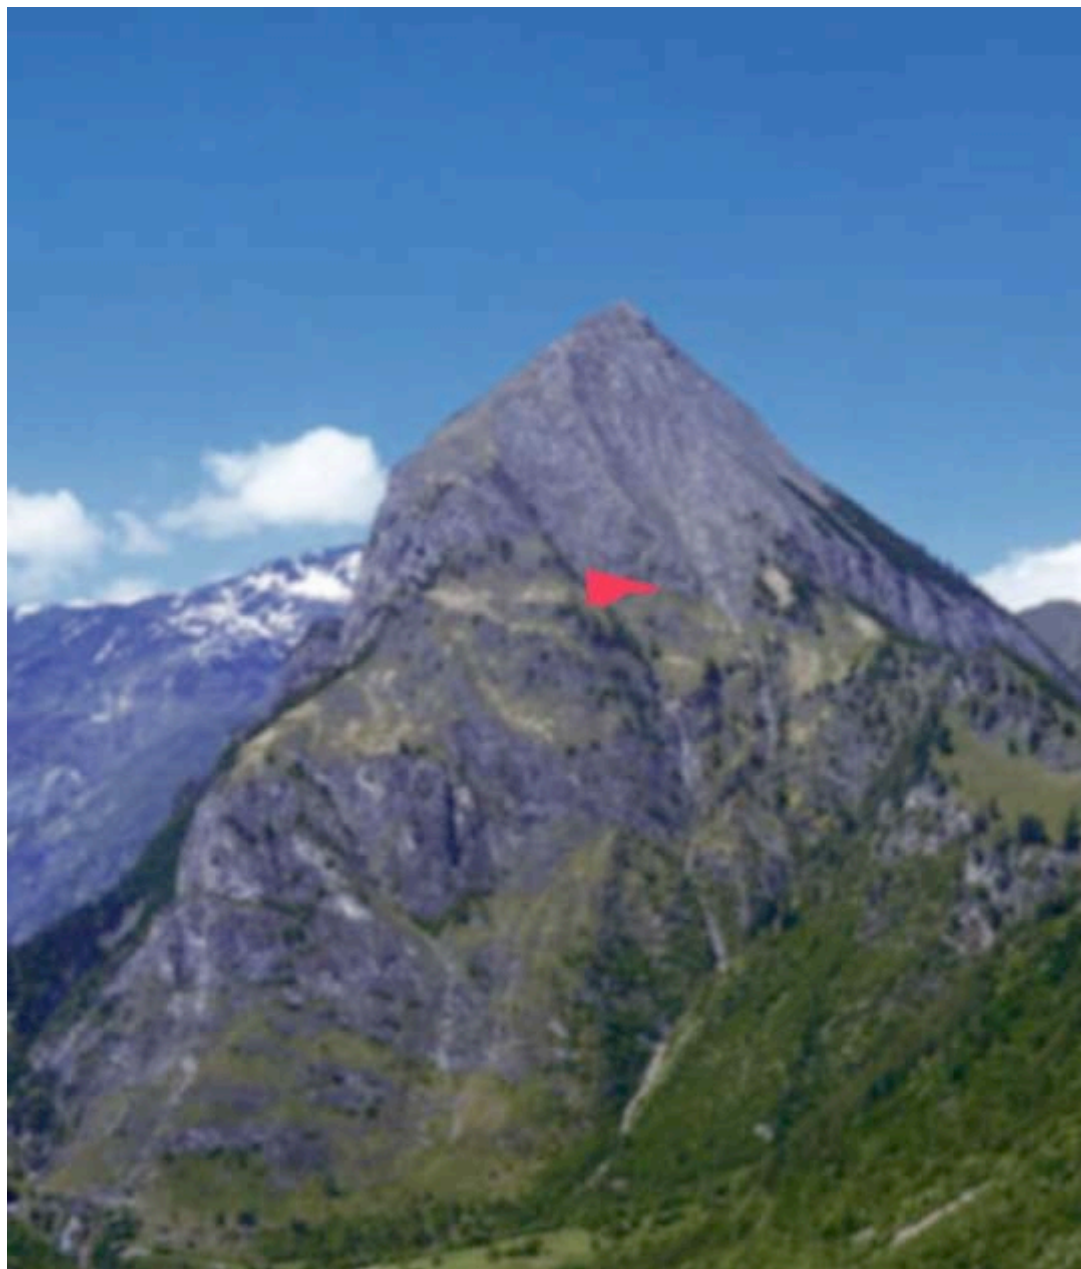

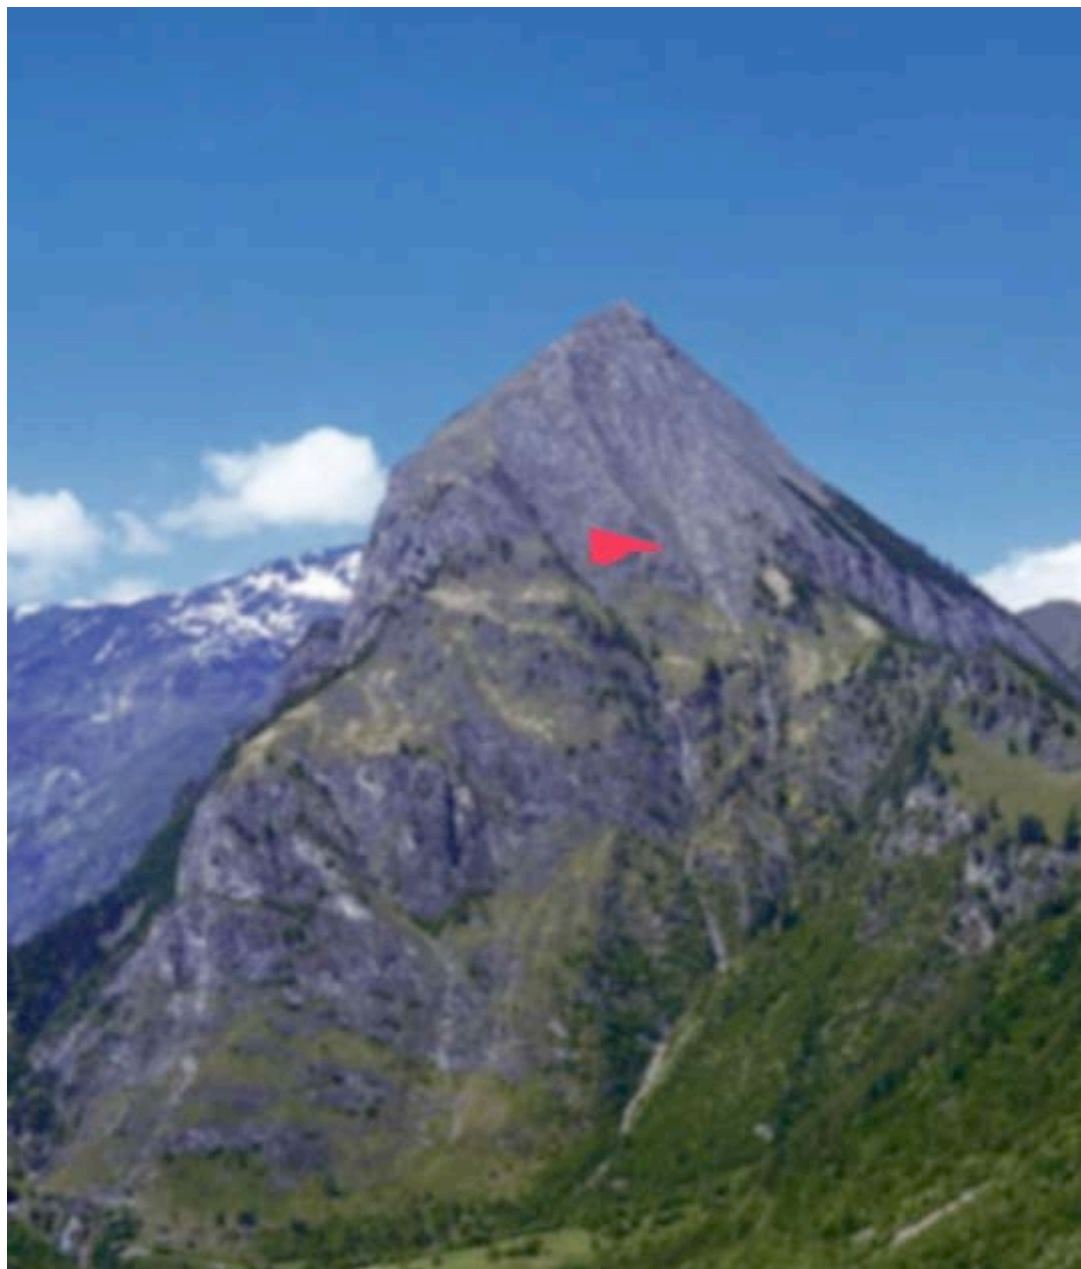

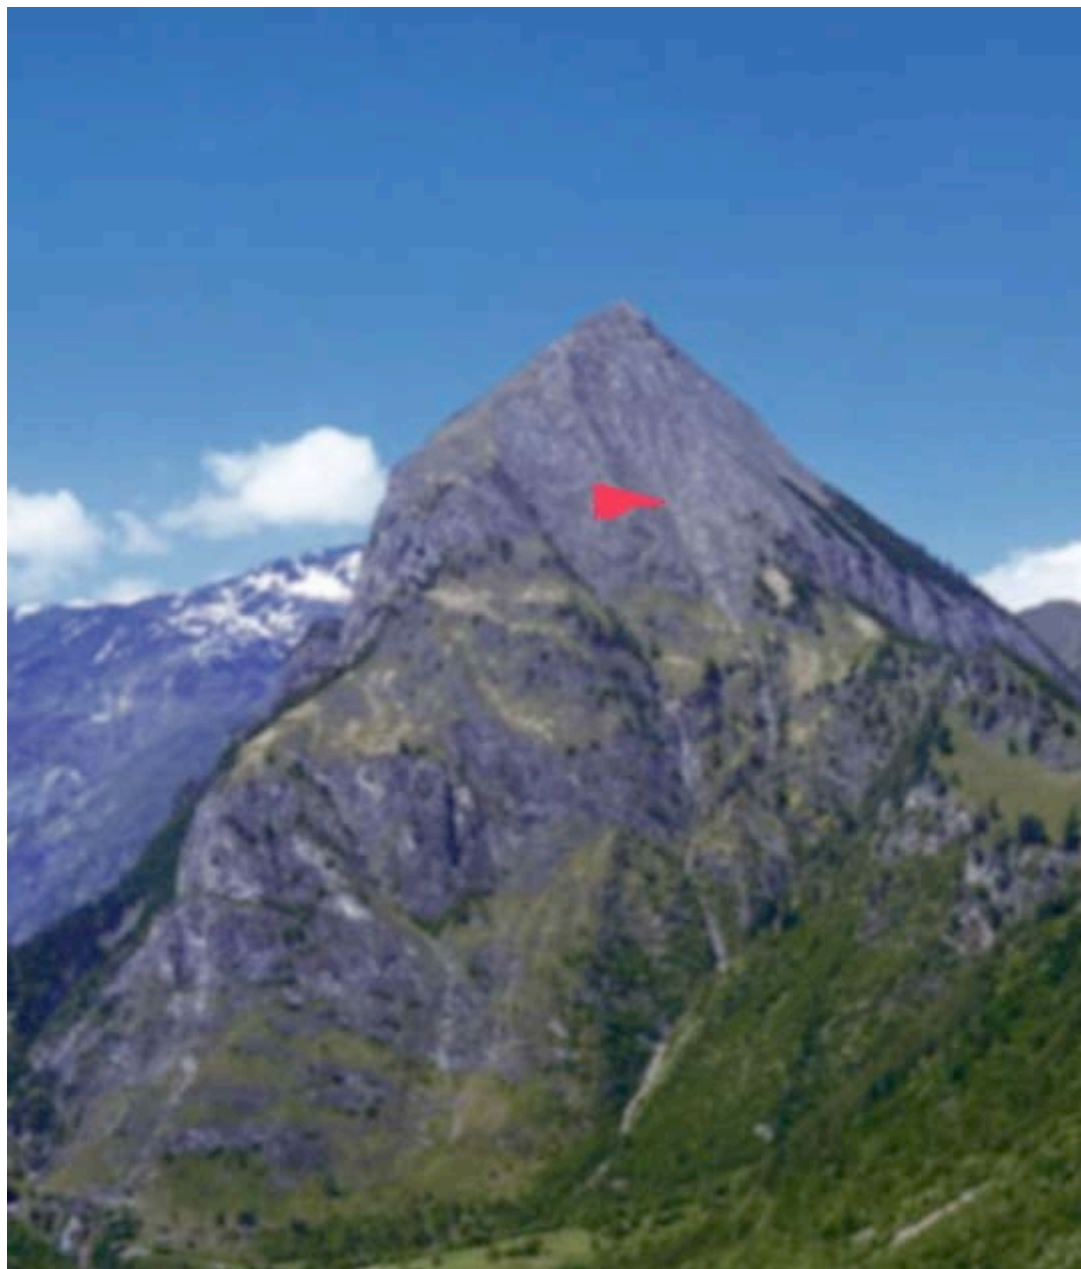

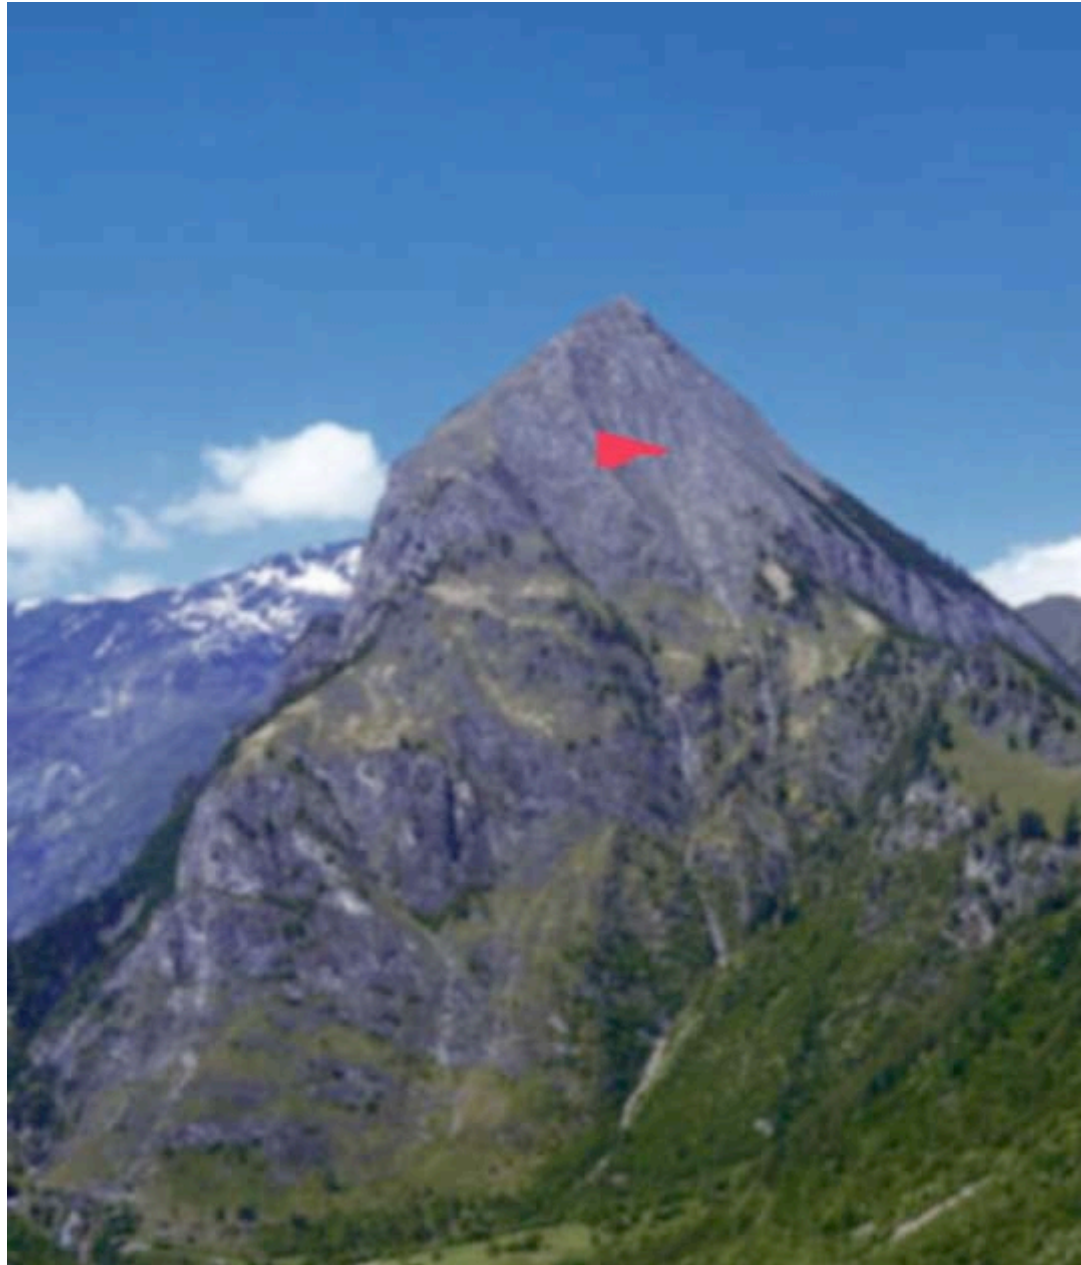

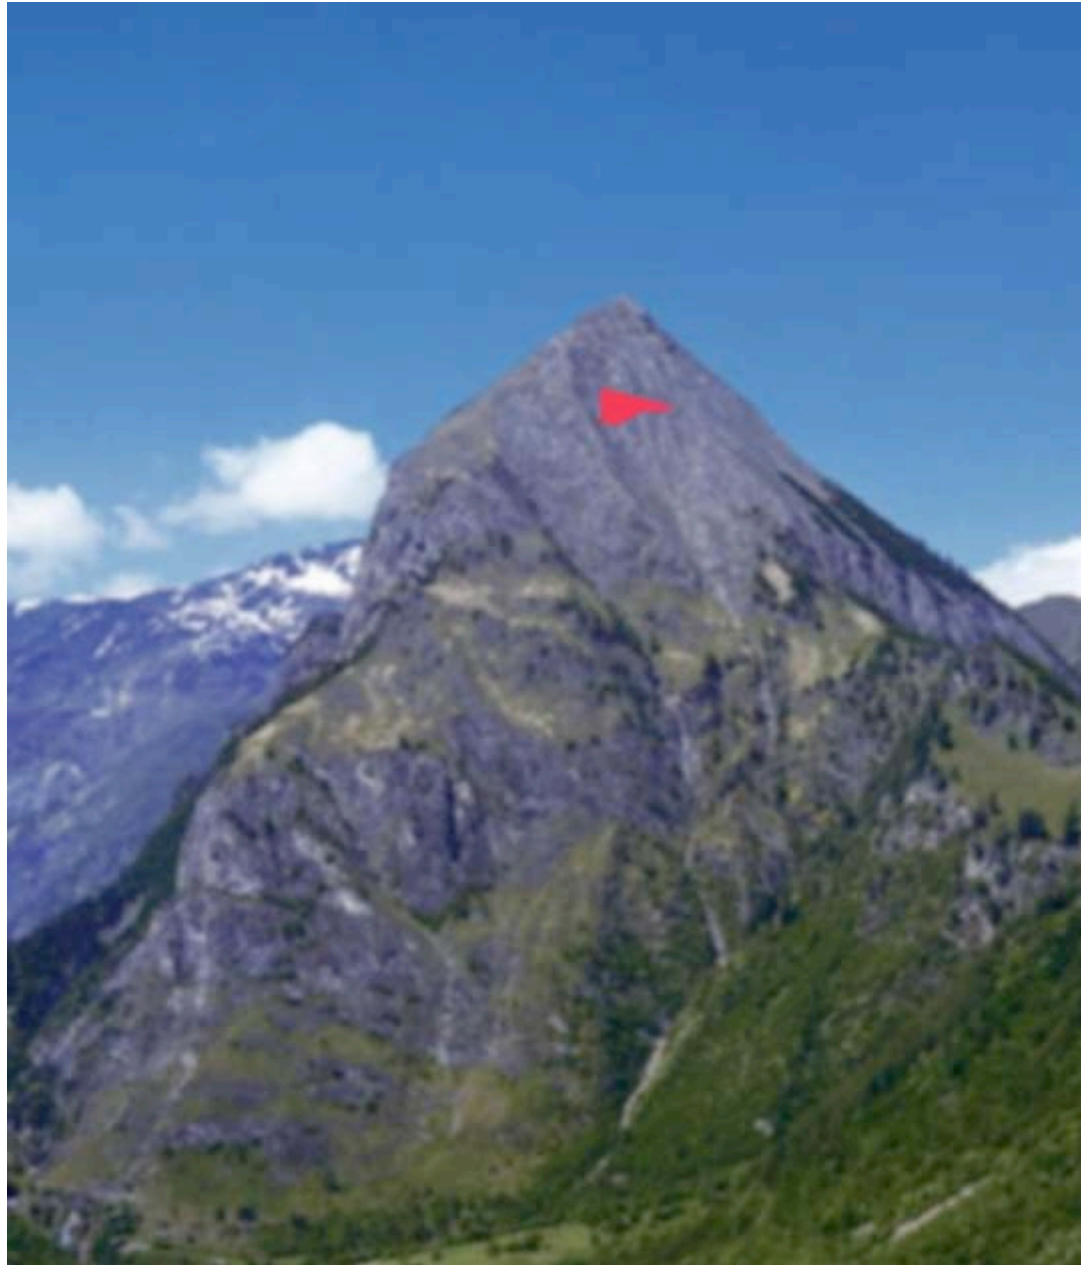

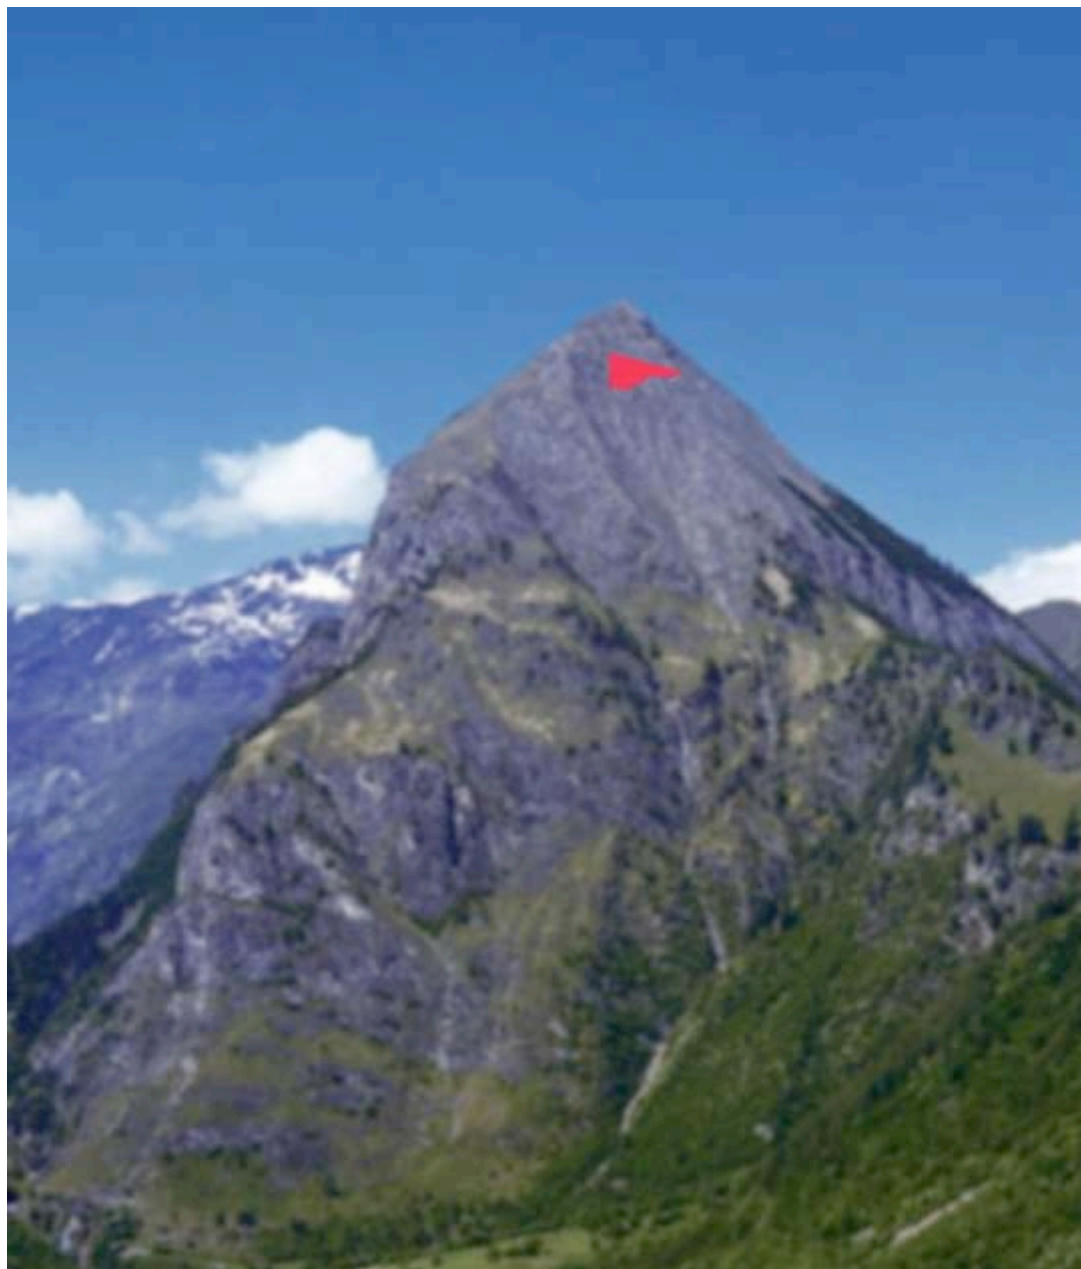

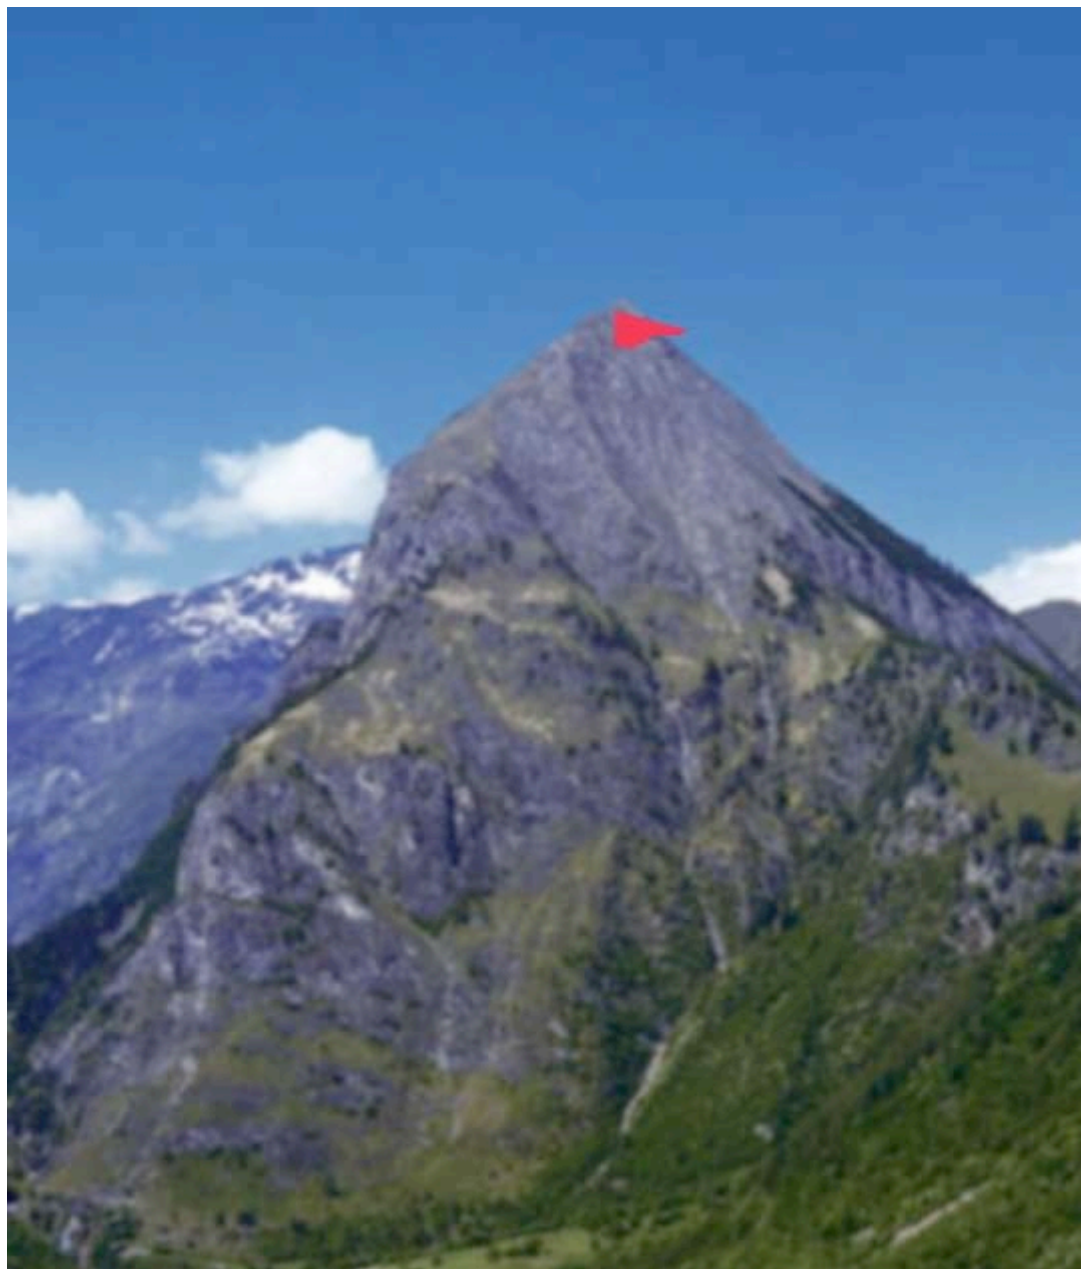

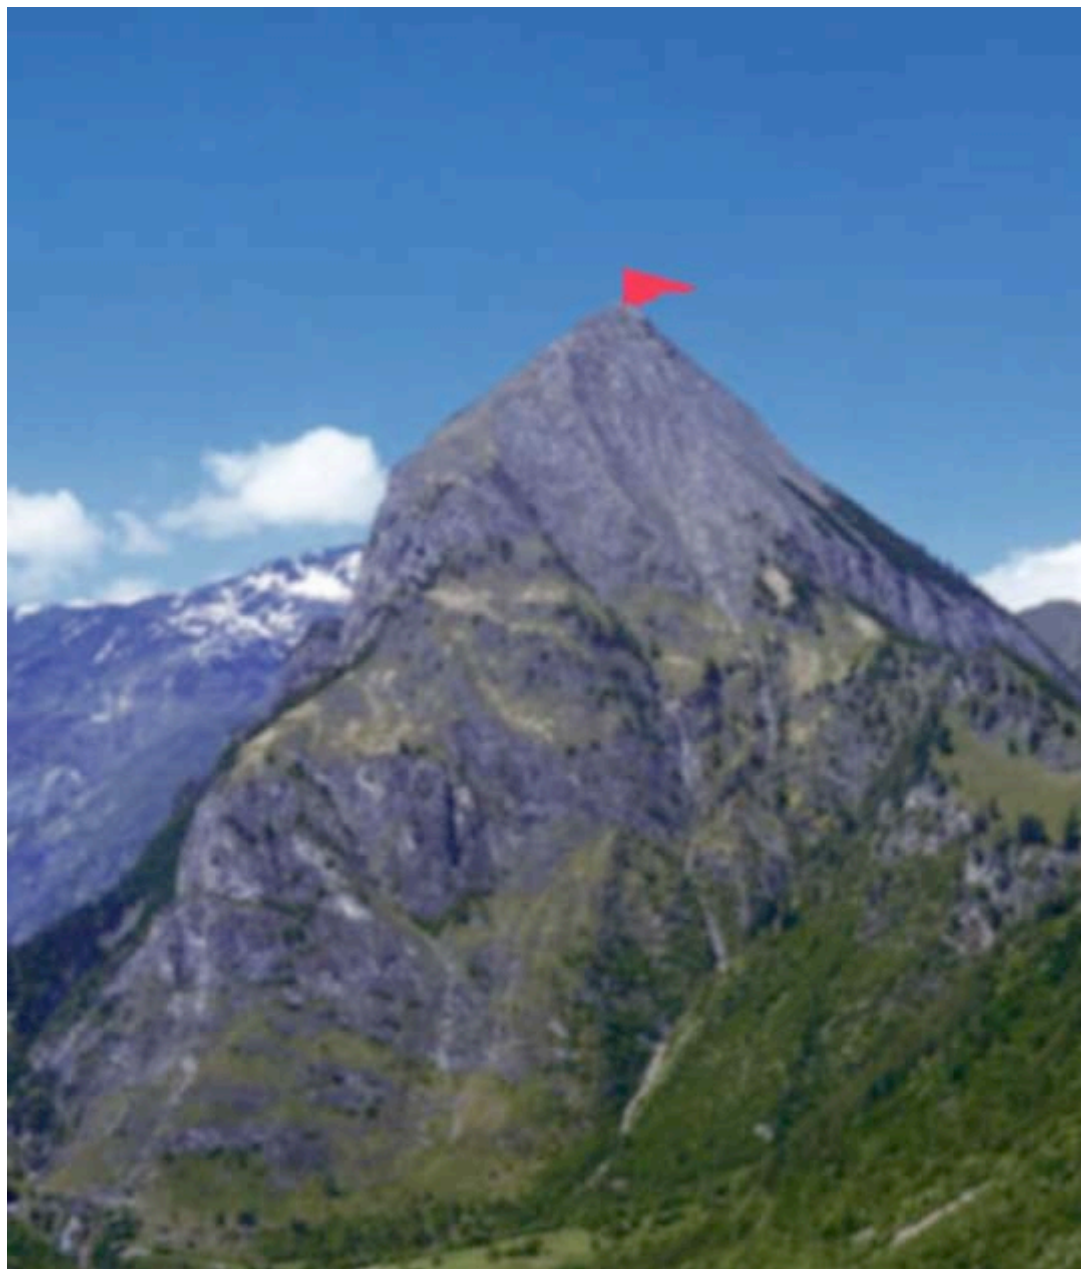

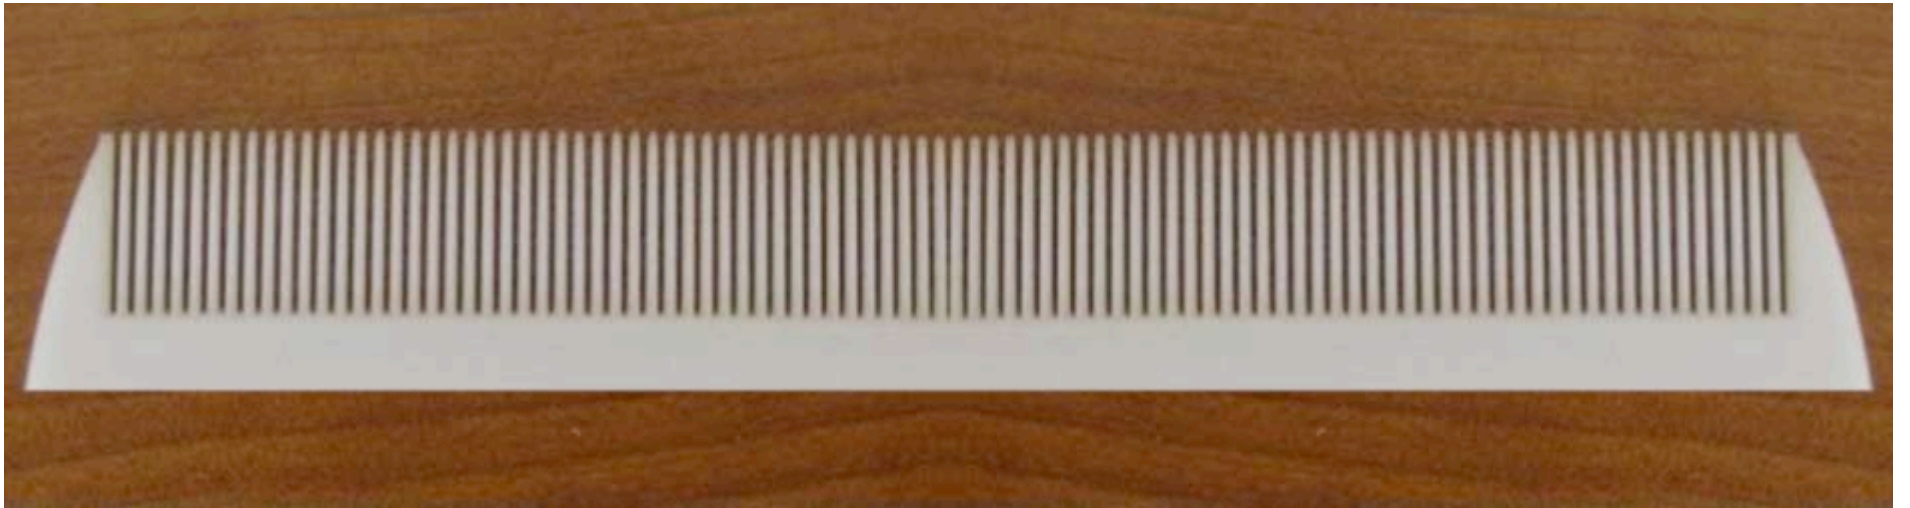

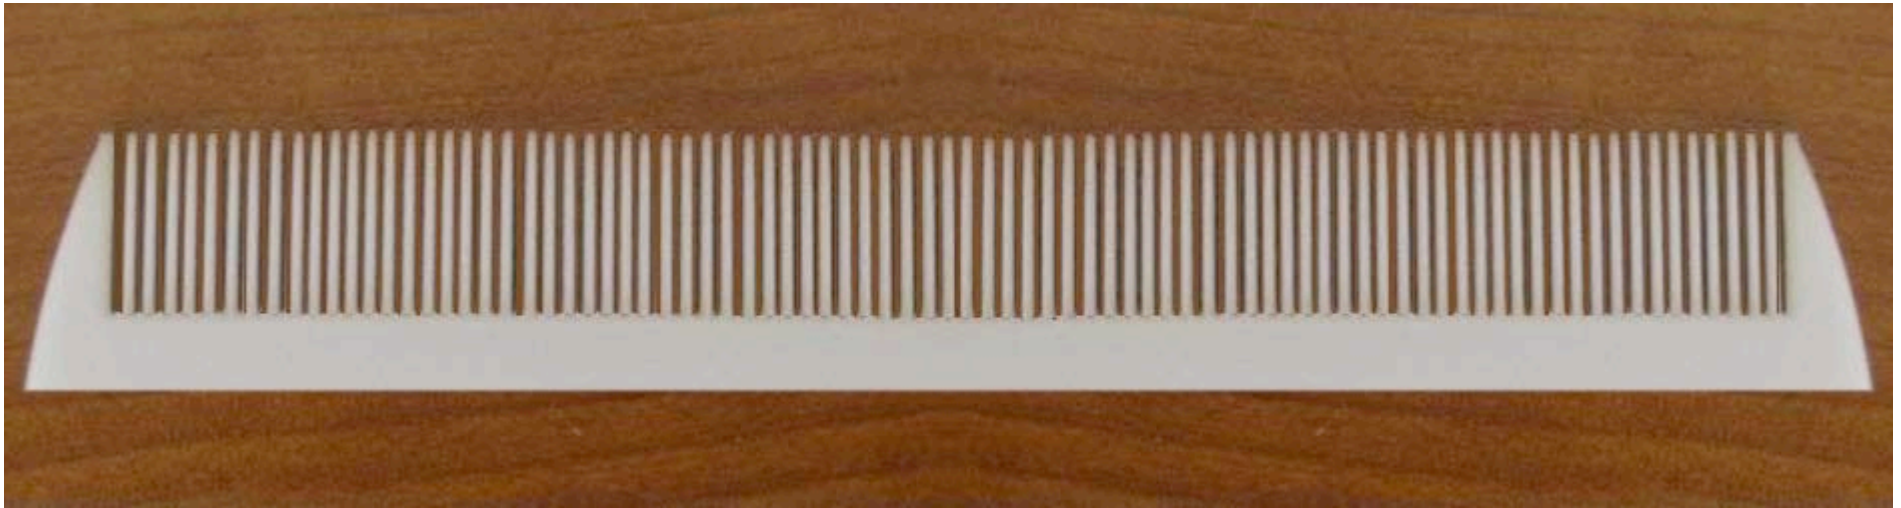

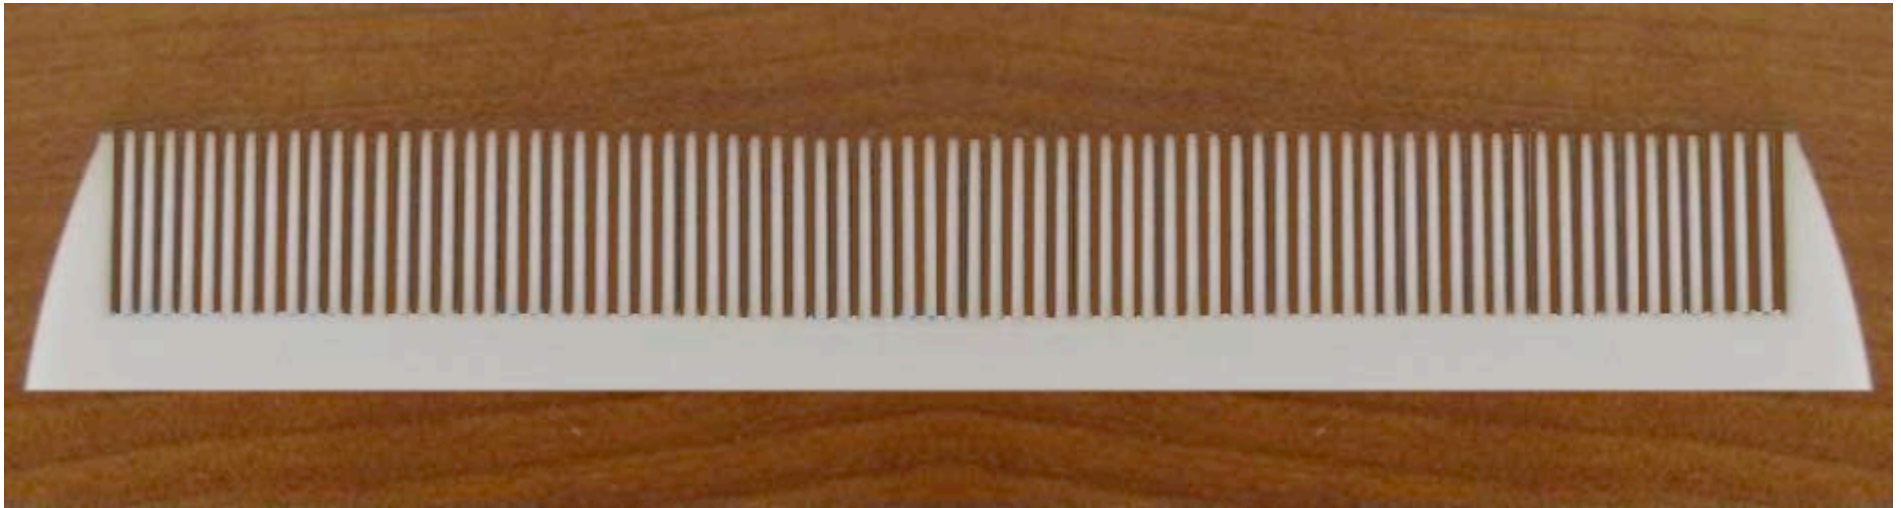

I denti del pettine sono **fitti/radi/né fitti né radi** ?

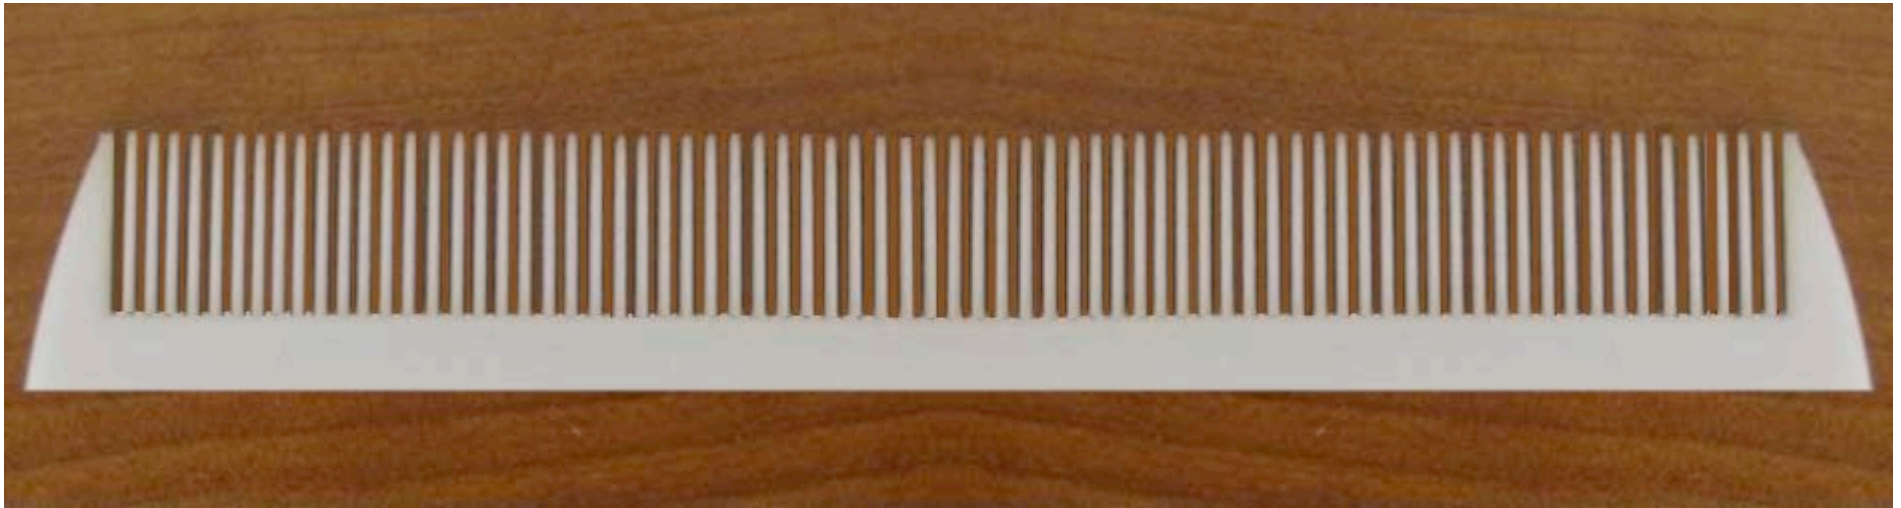

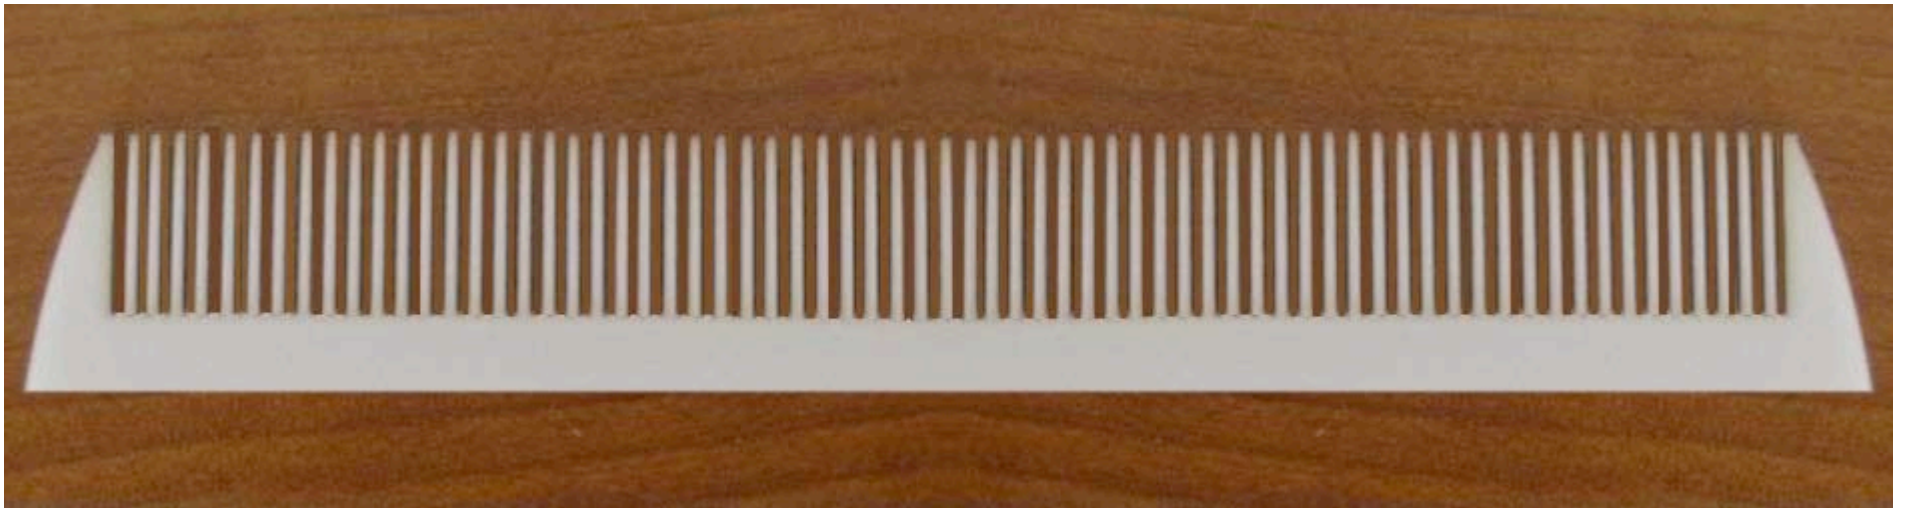

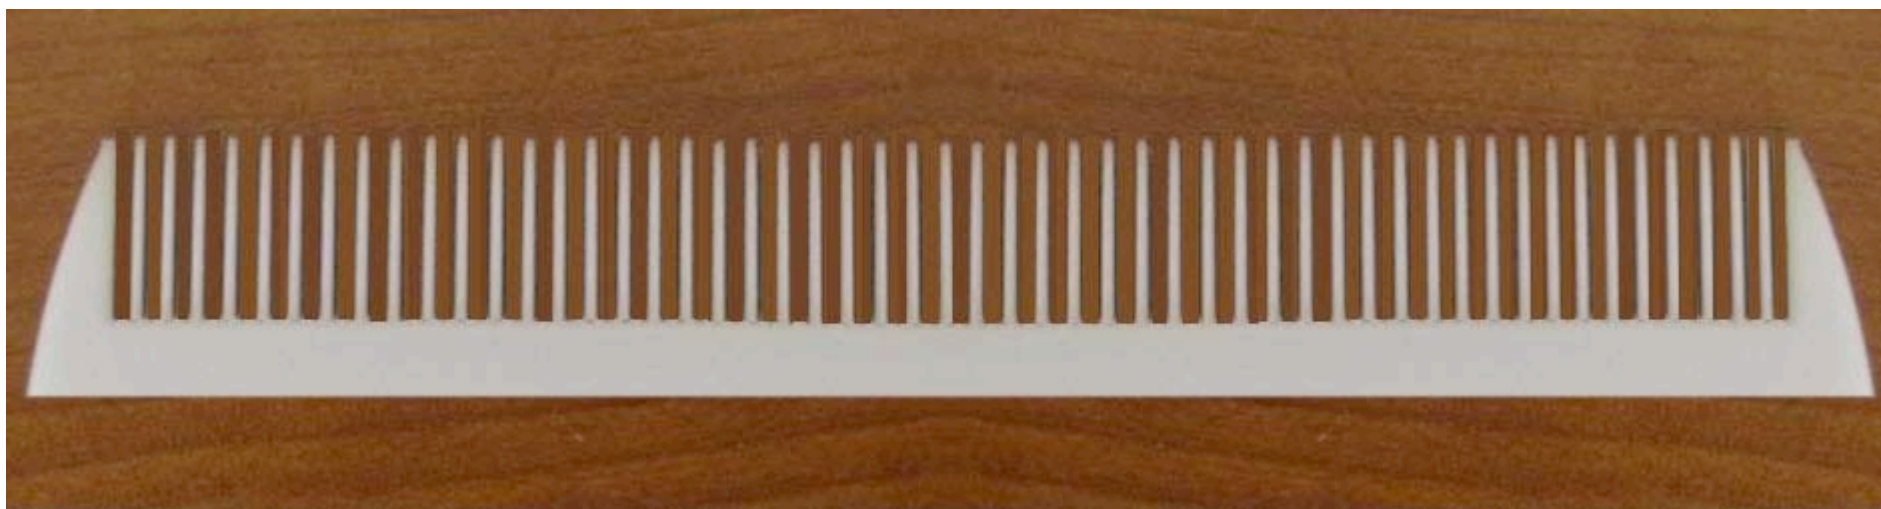

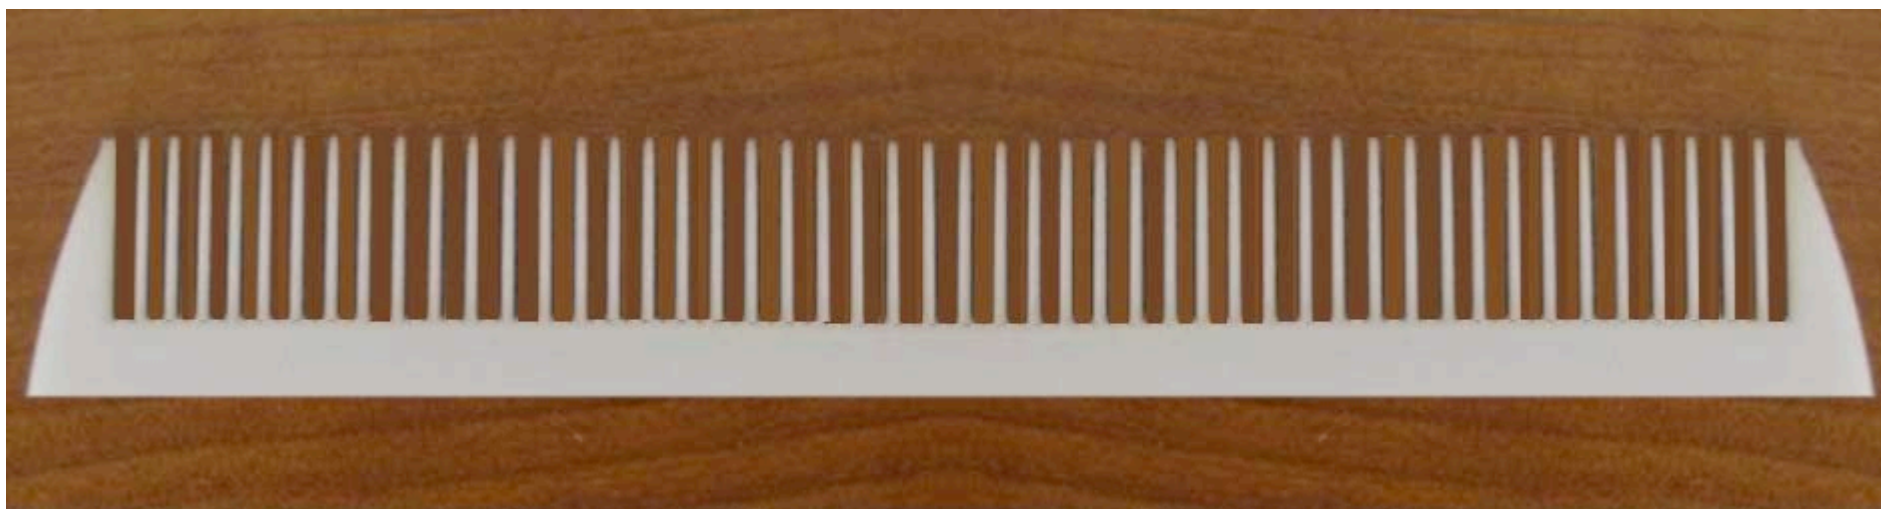

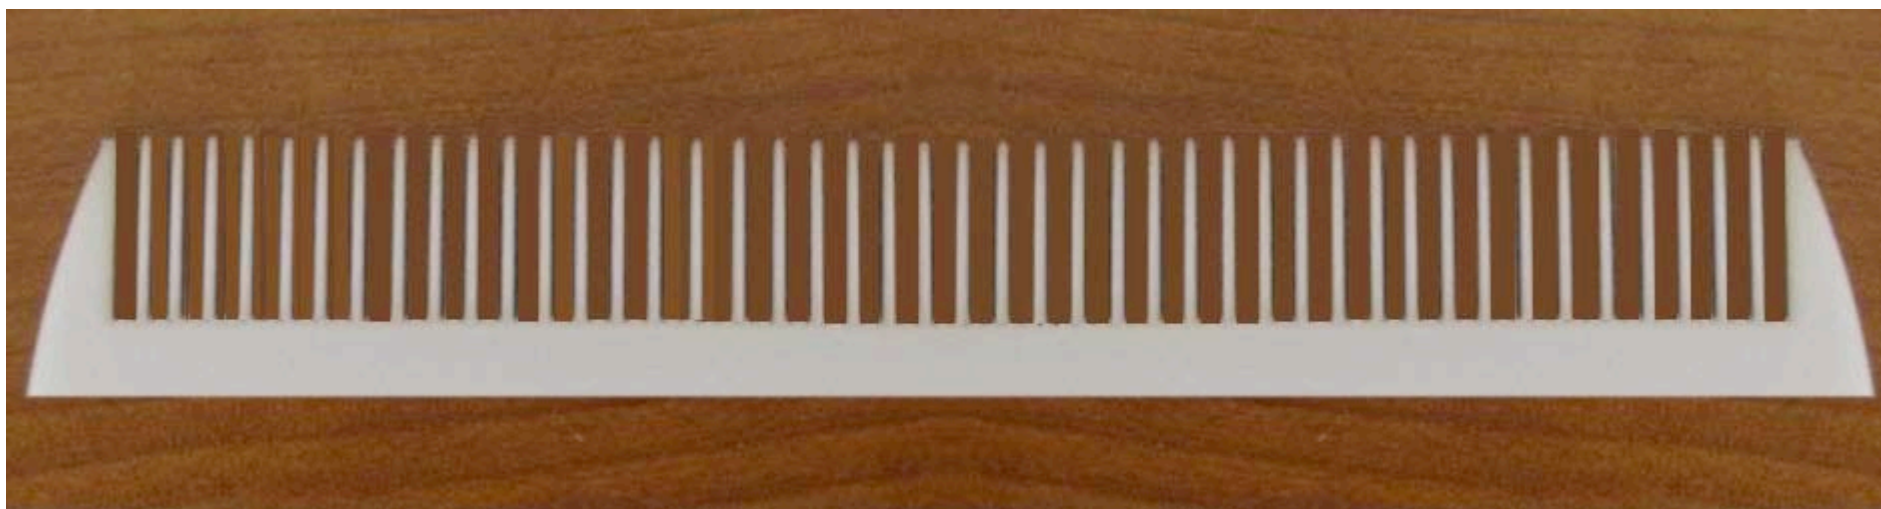

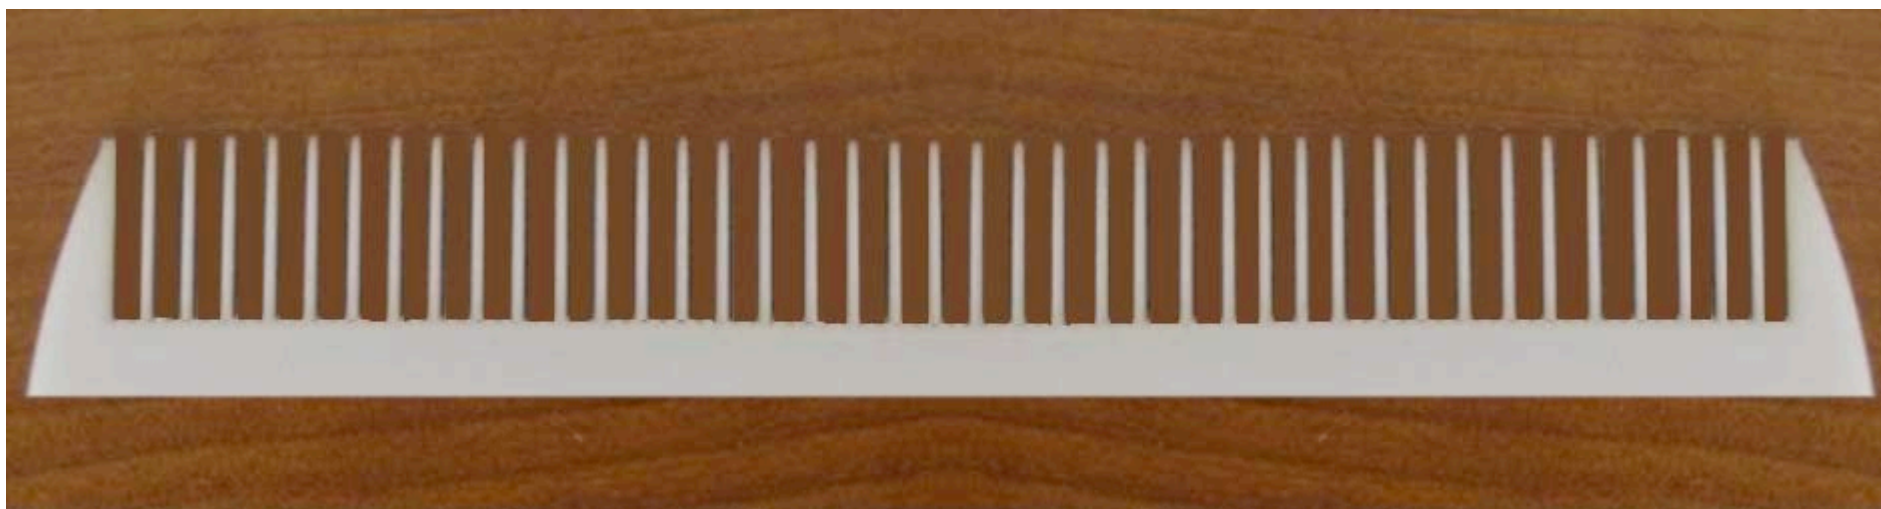

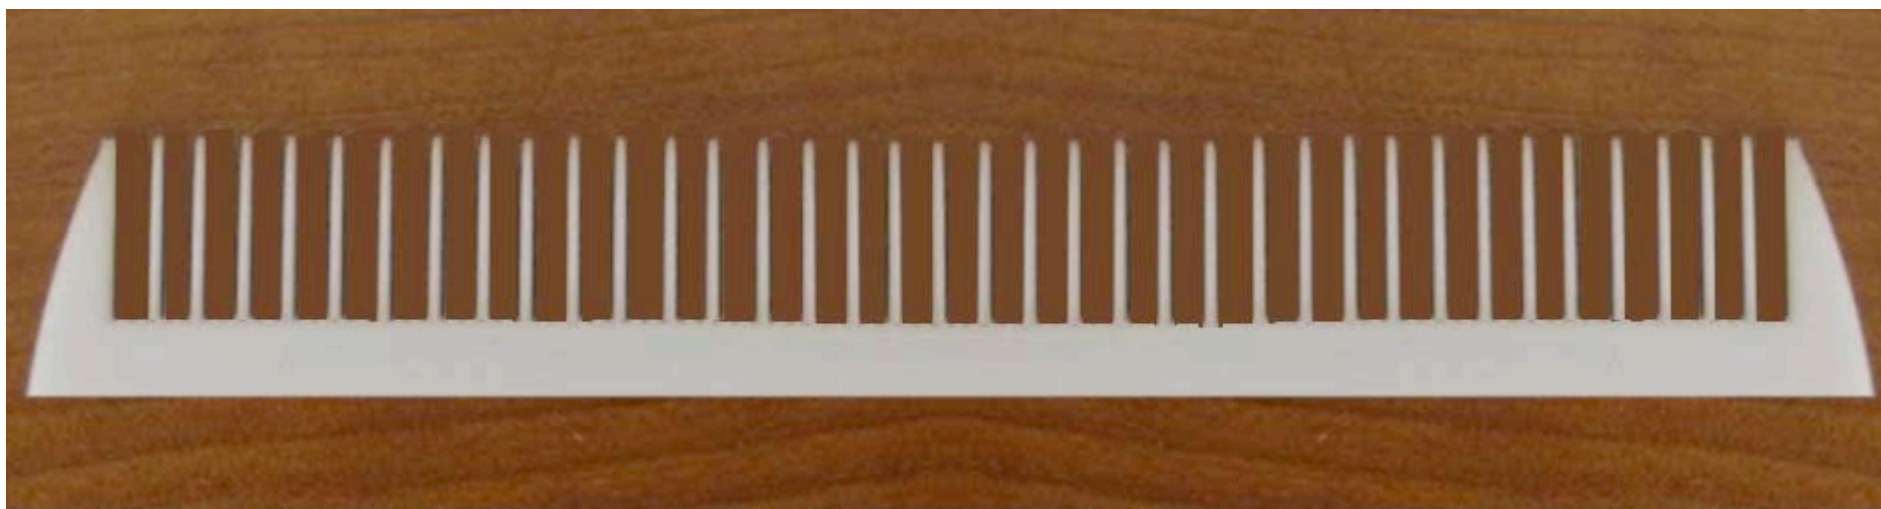

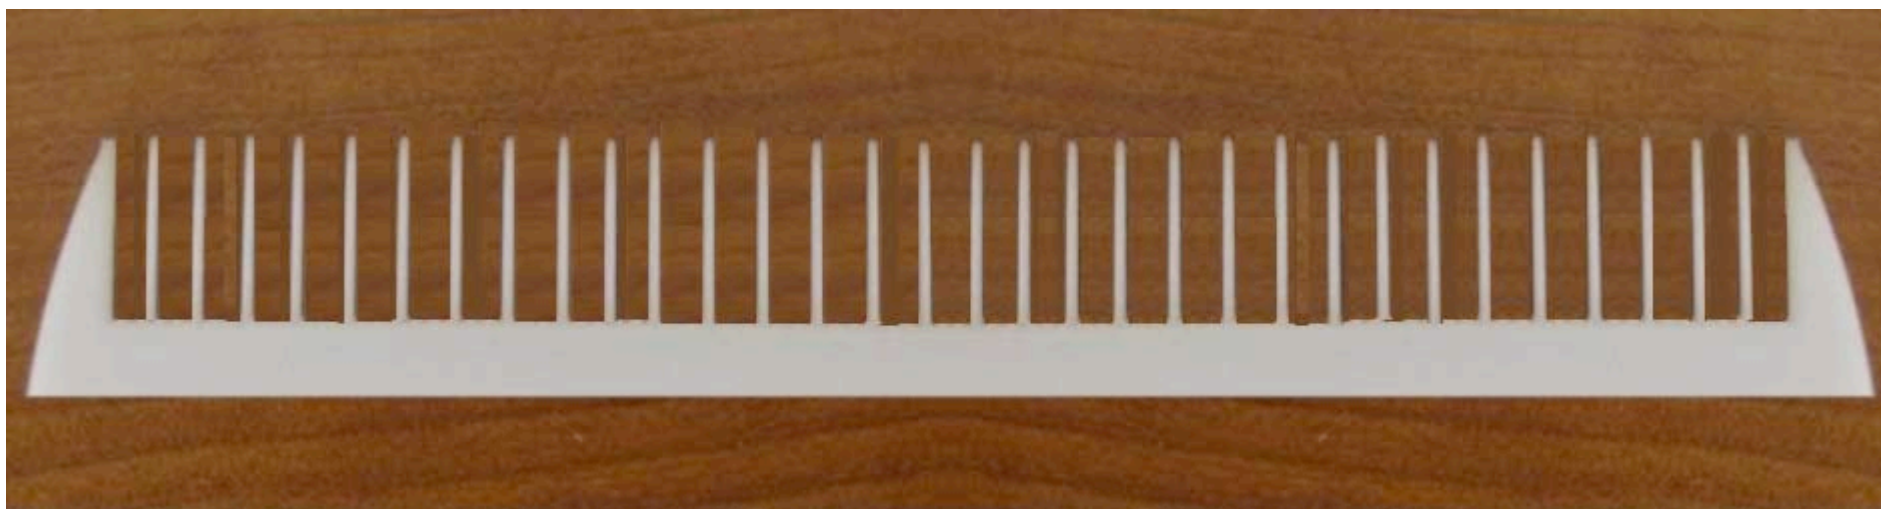

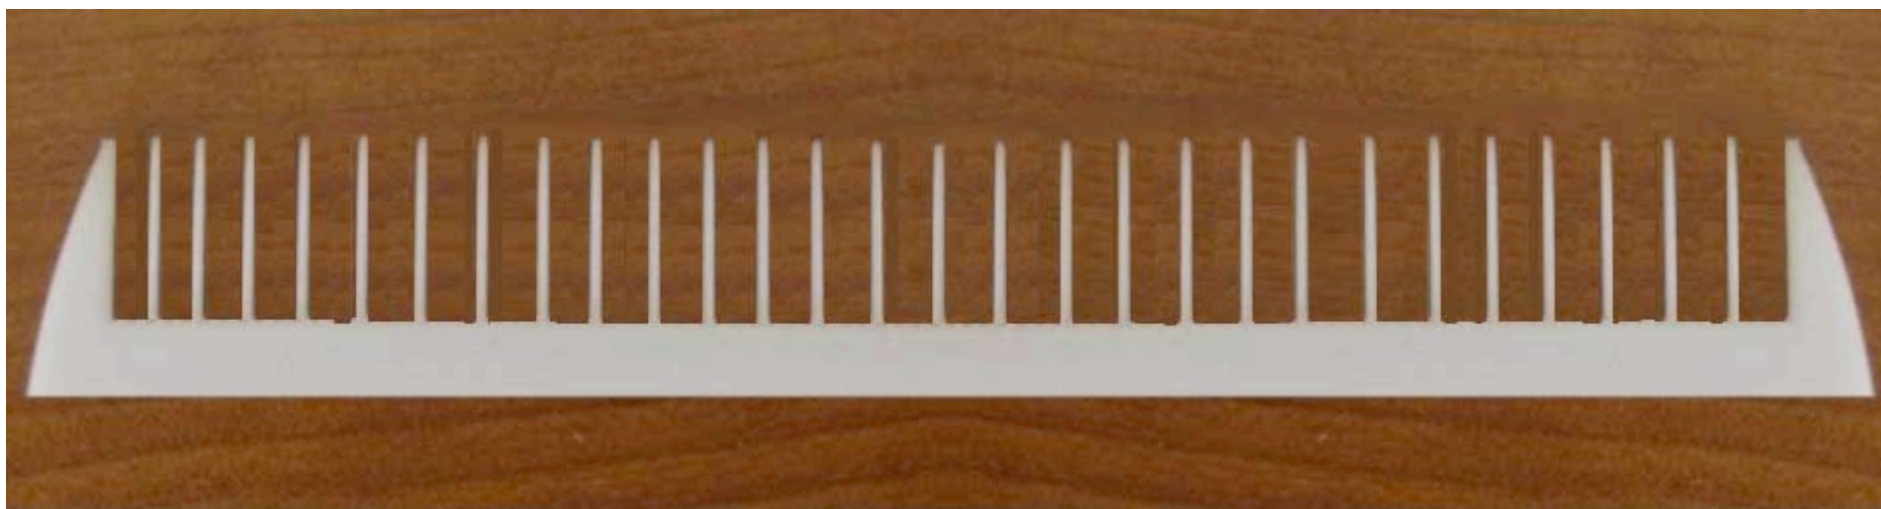

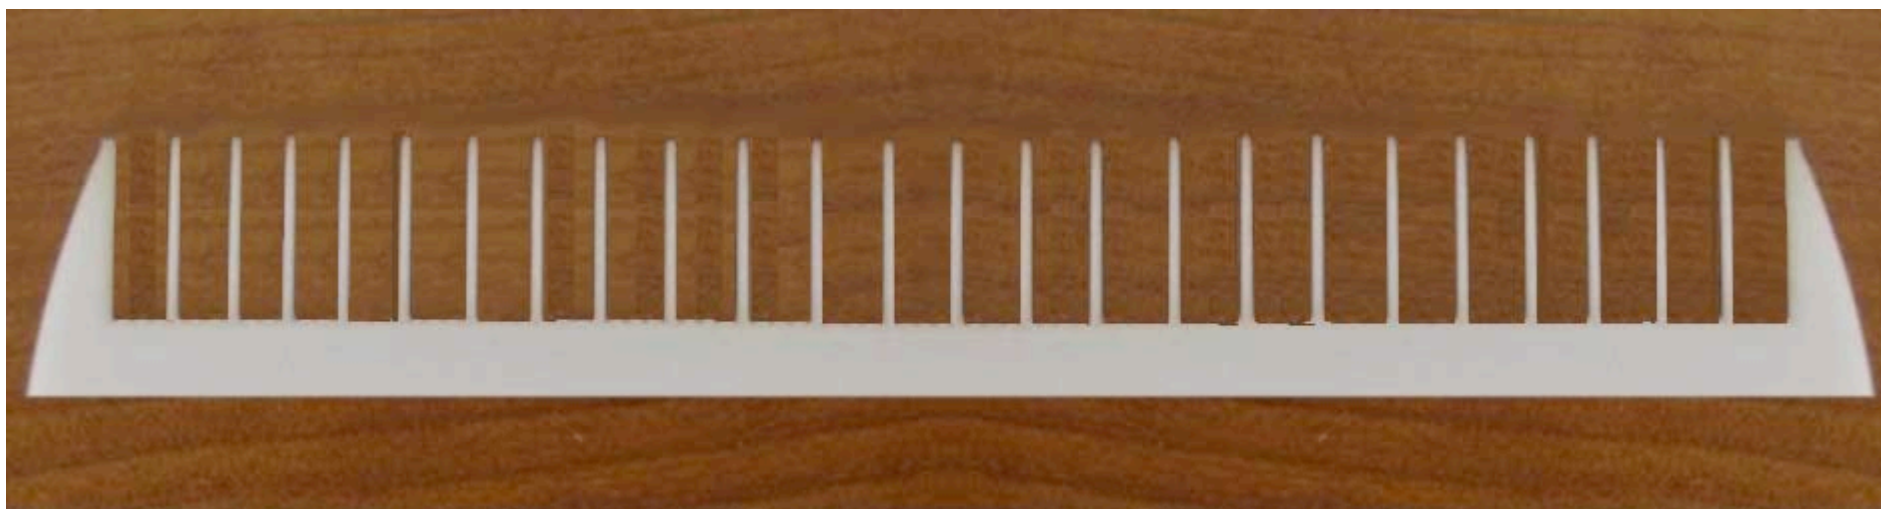

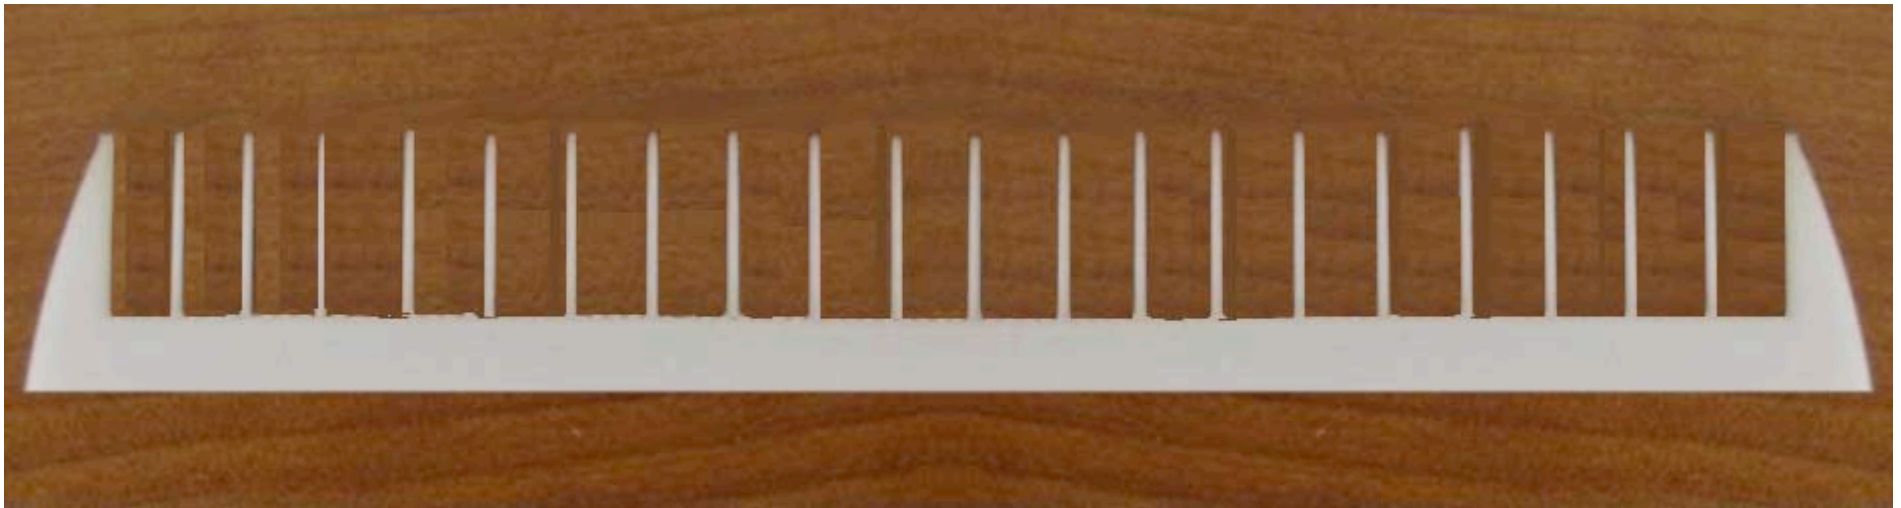

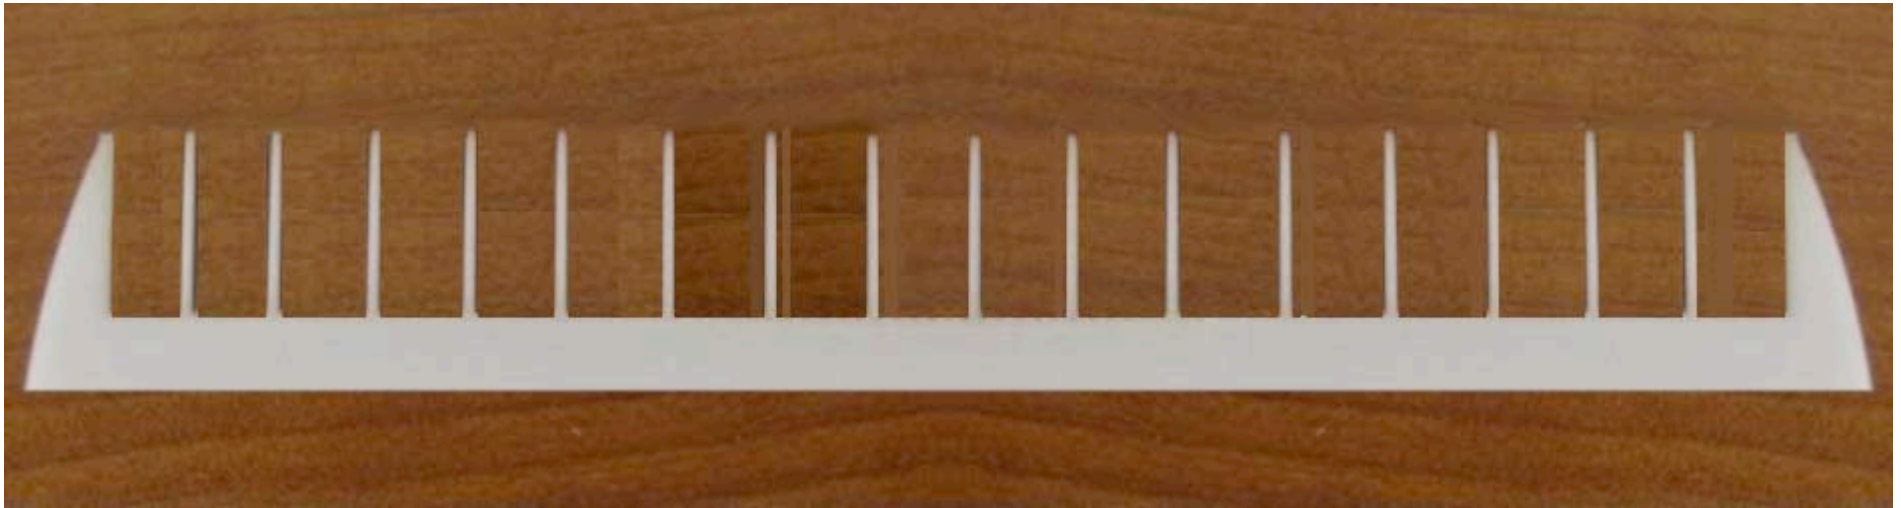

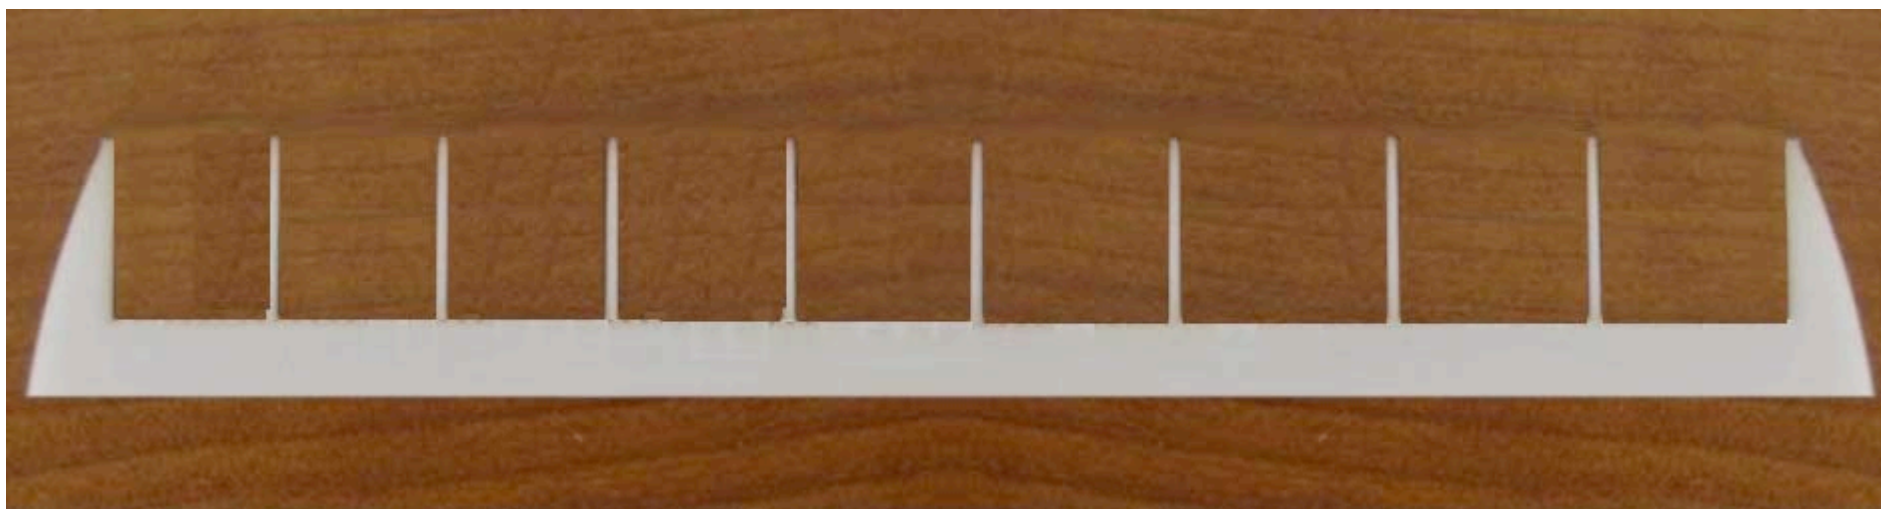

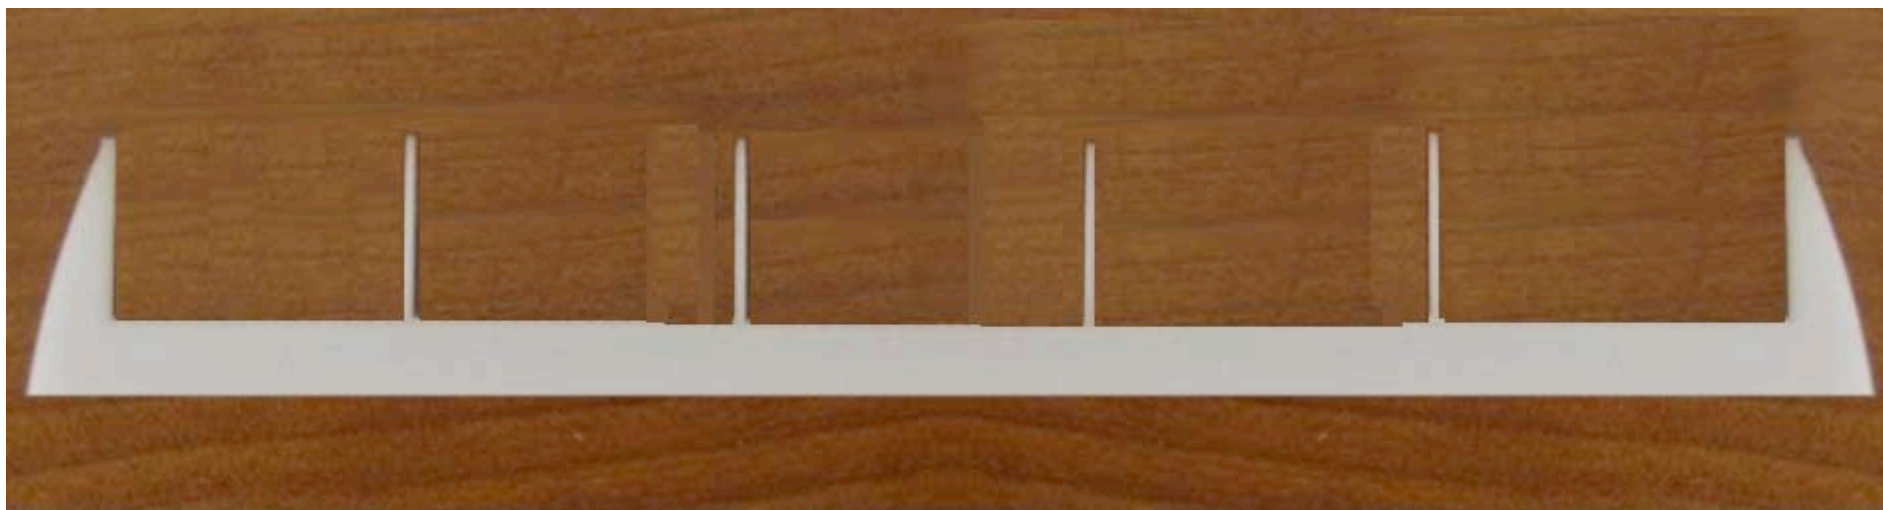

Il monitor mostra il **davanti/dietro/né davanti né dietro?**

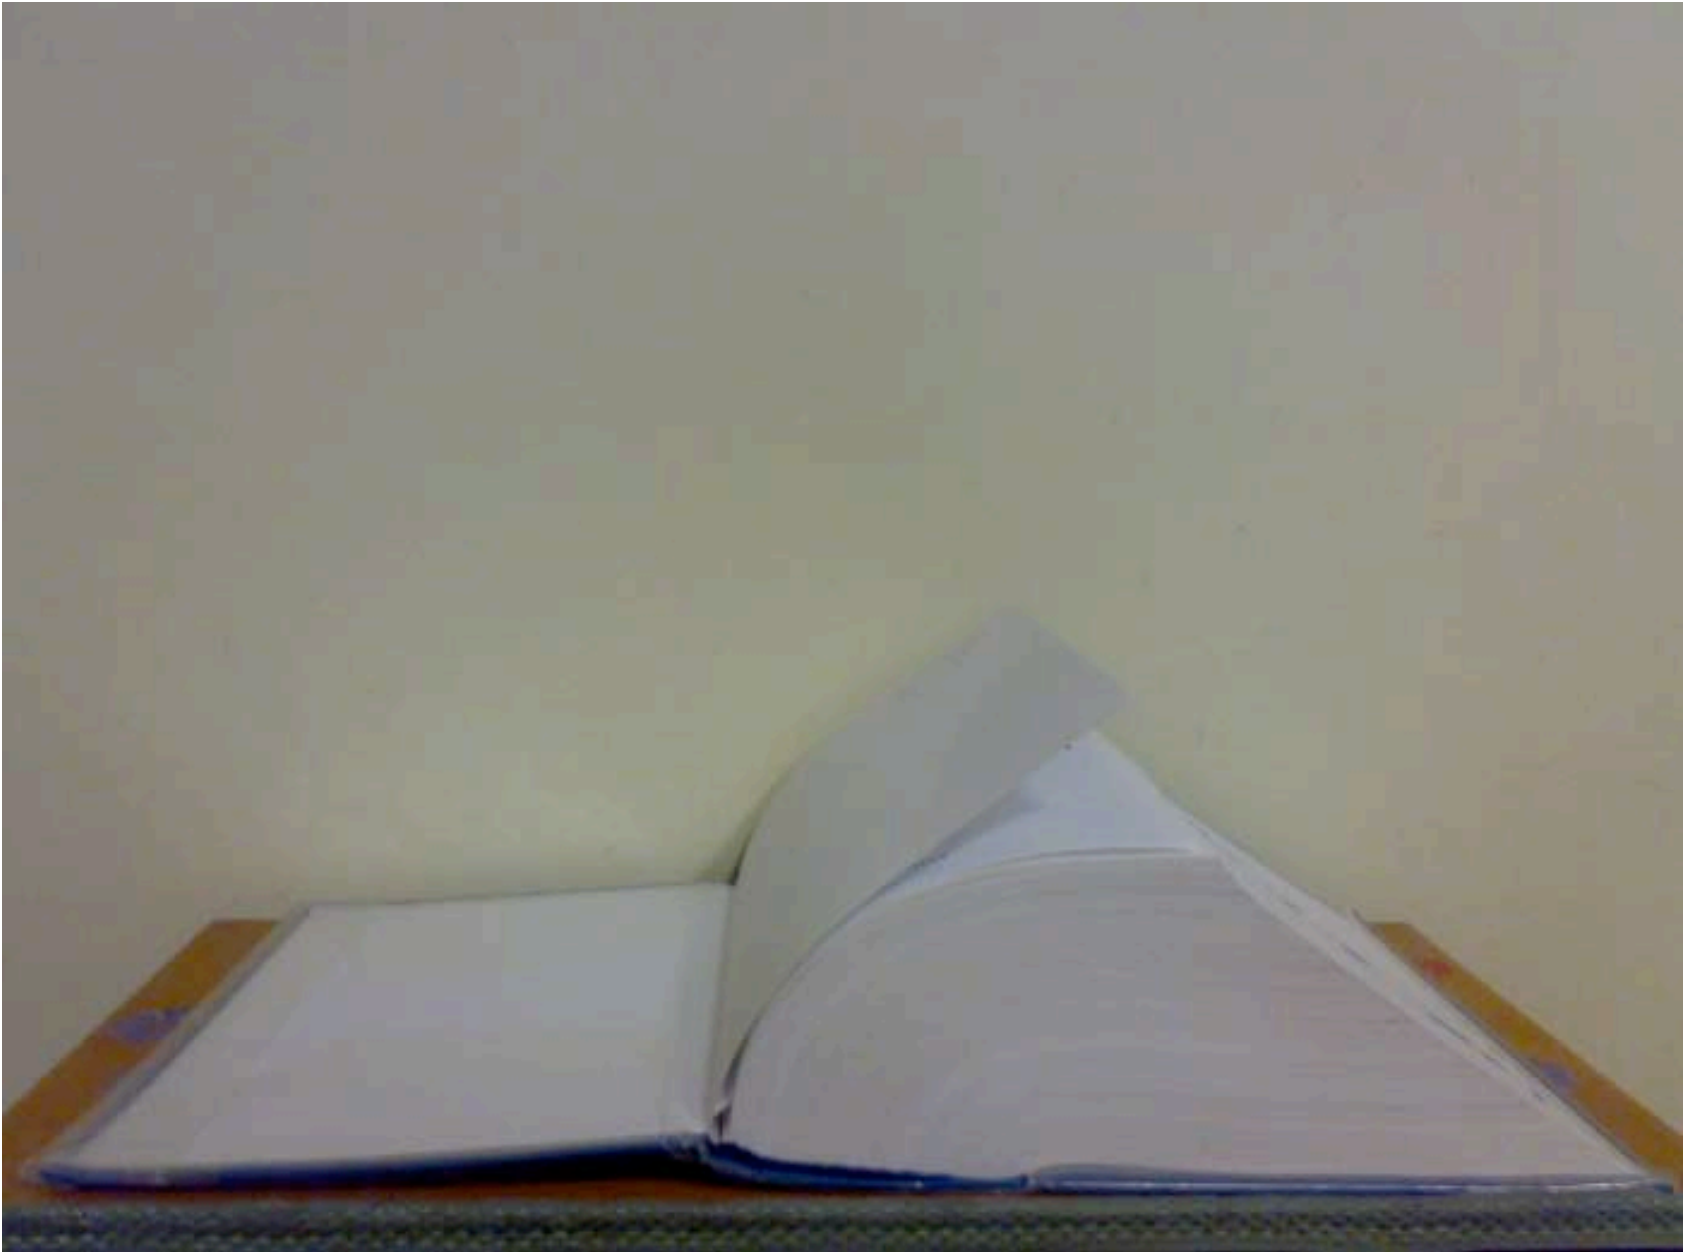

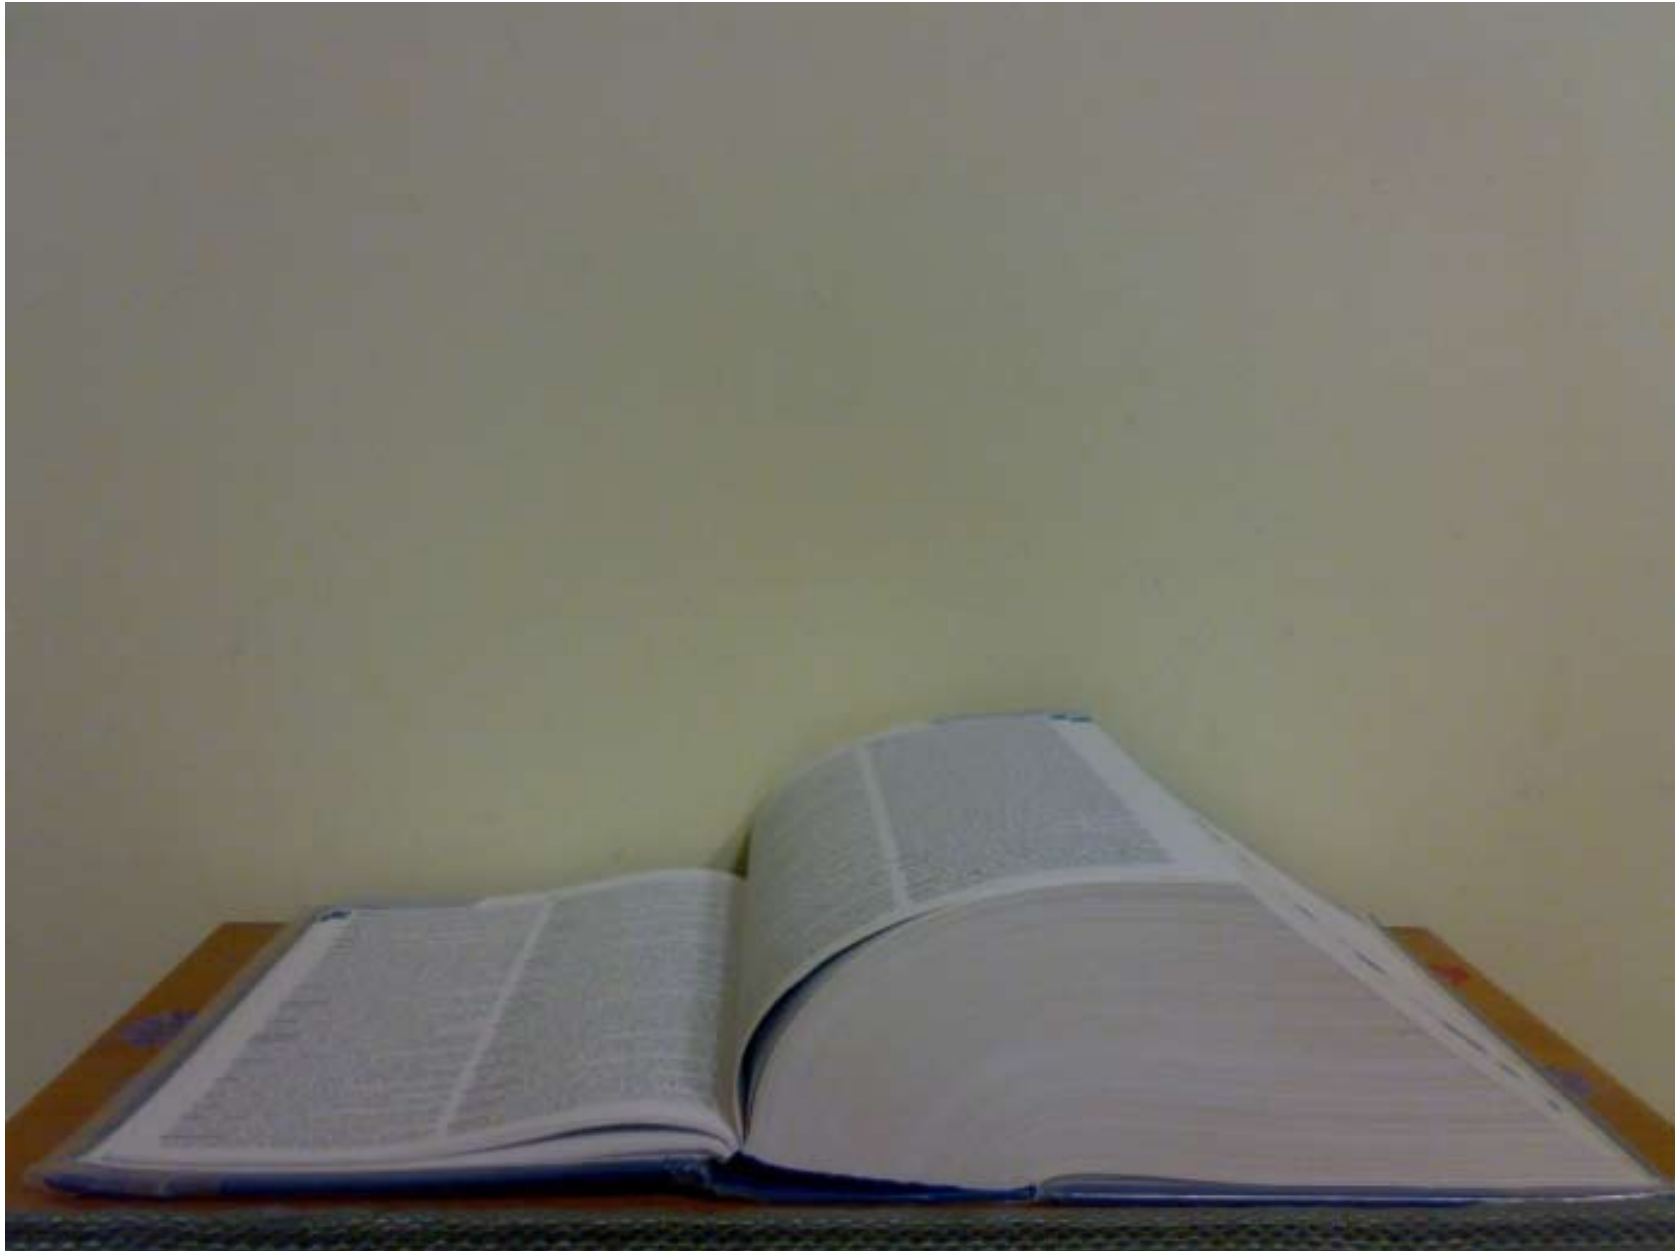

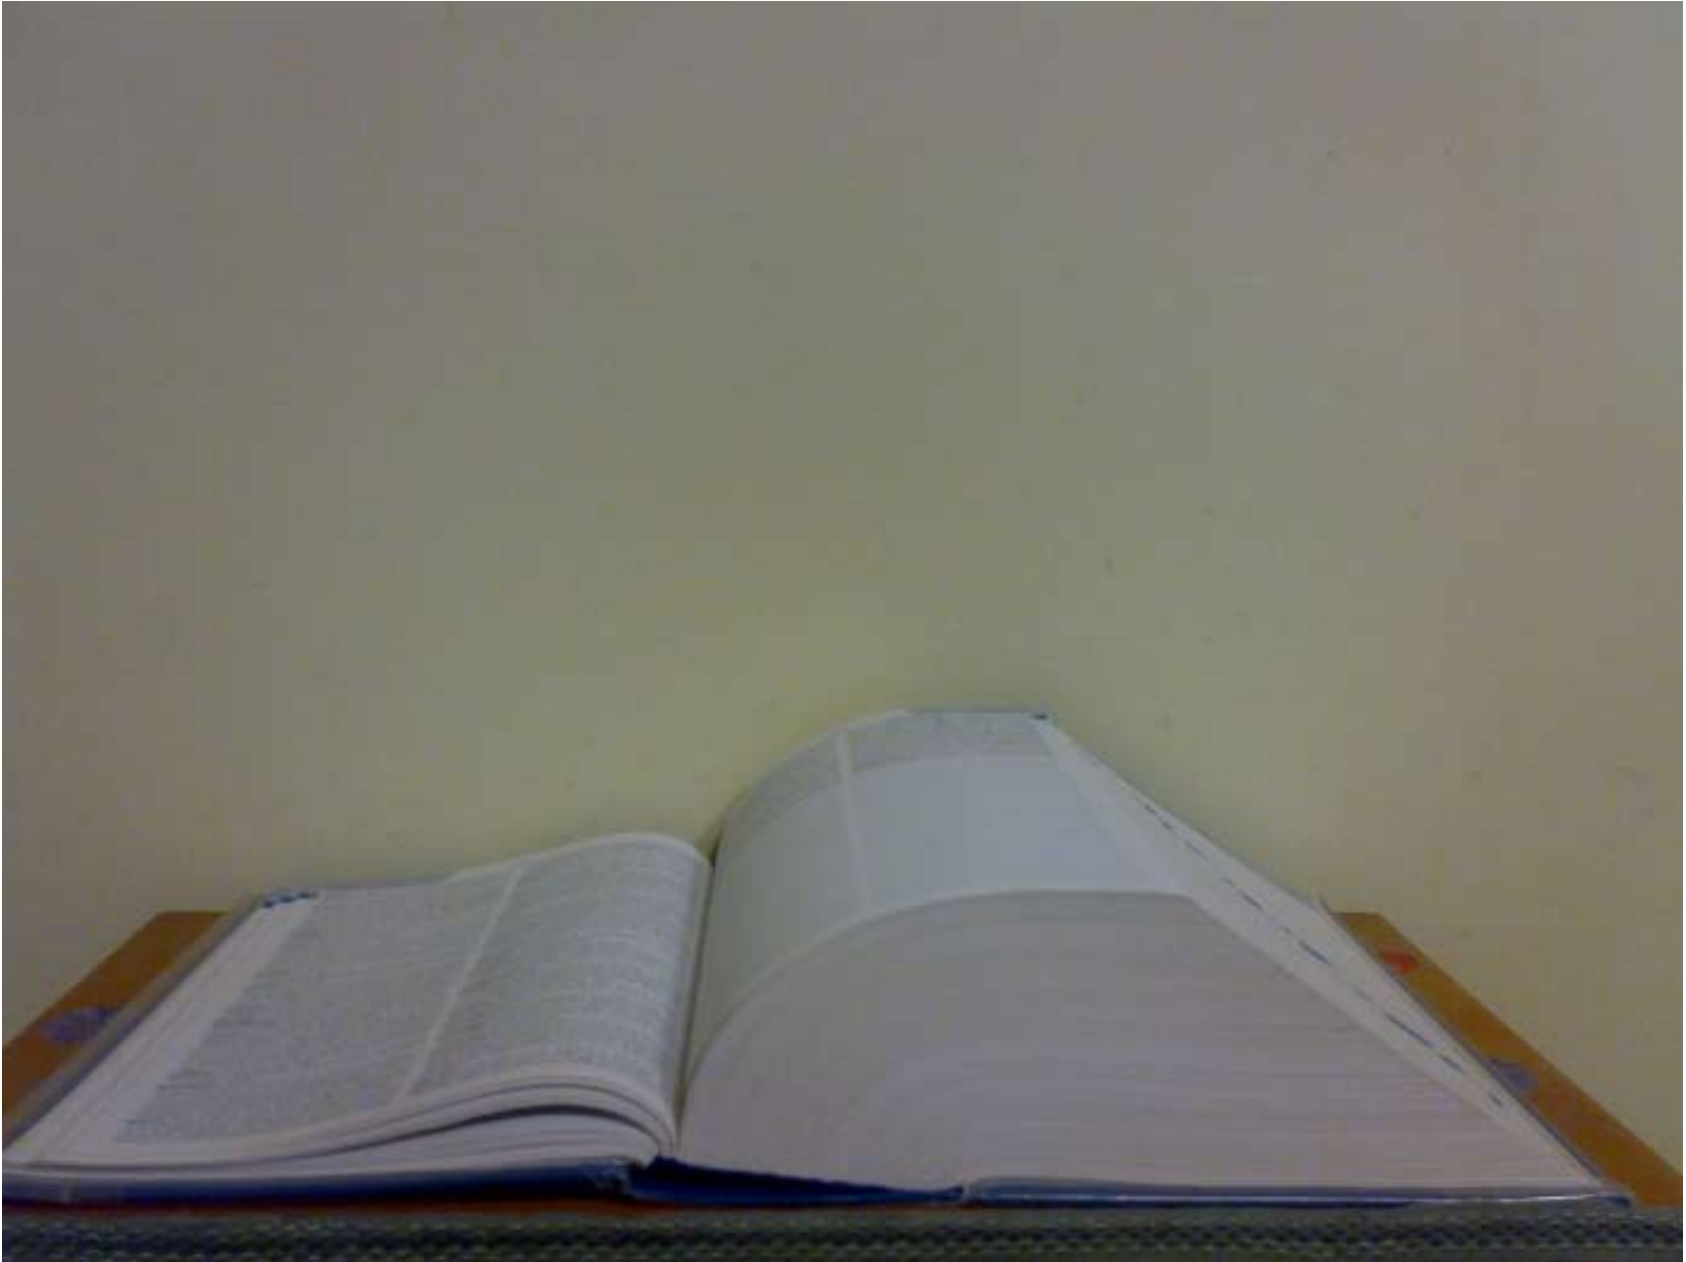

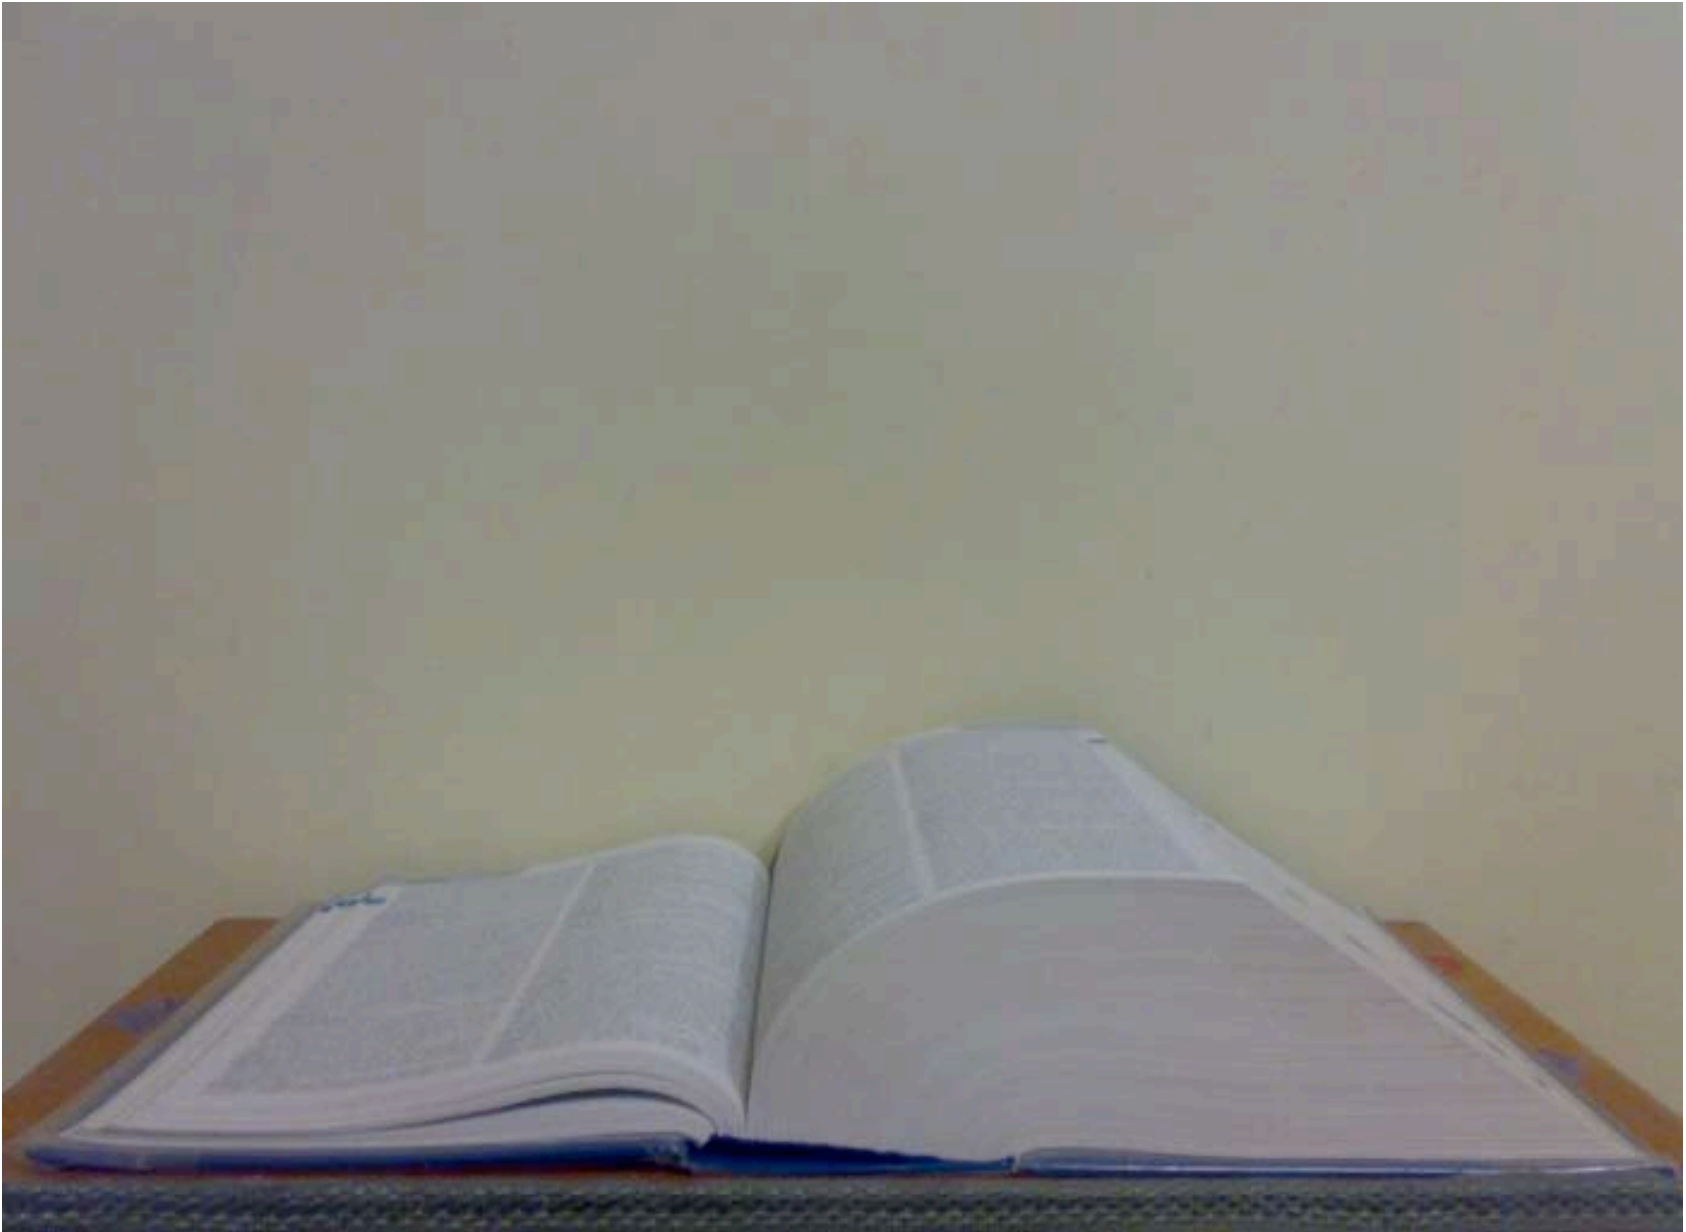

Siamo all'**inizio/fine/né inizio né fine** del dizionario?

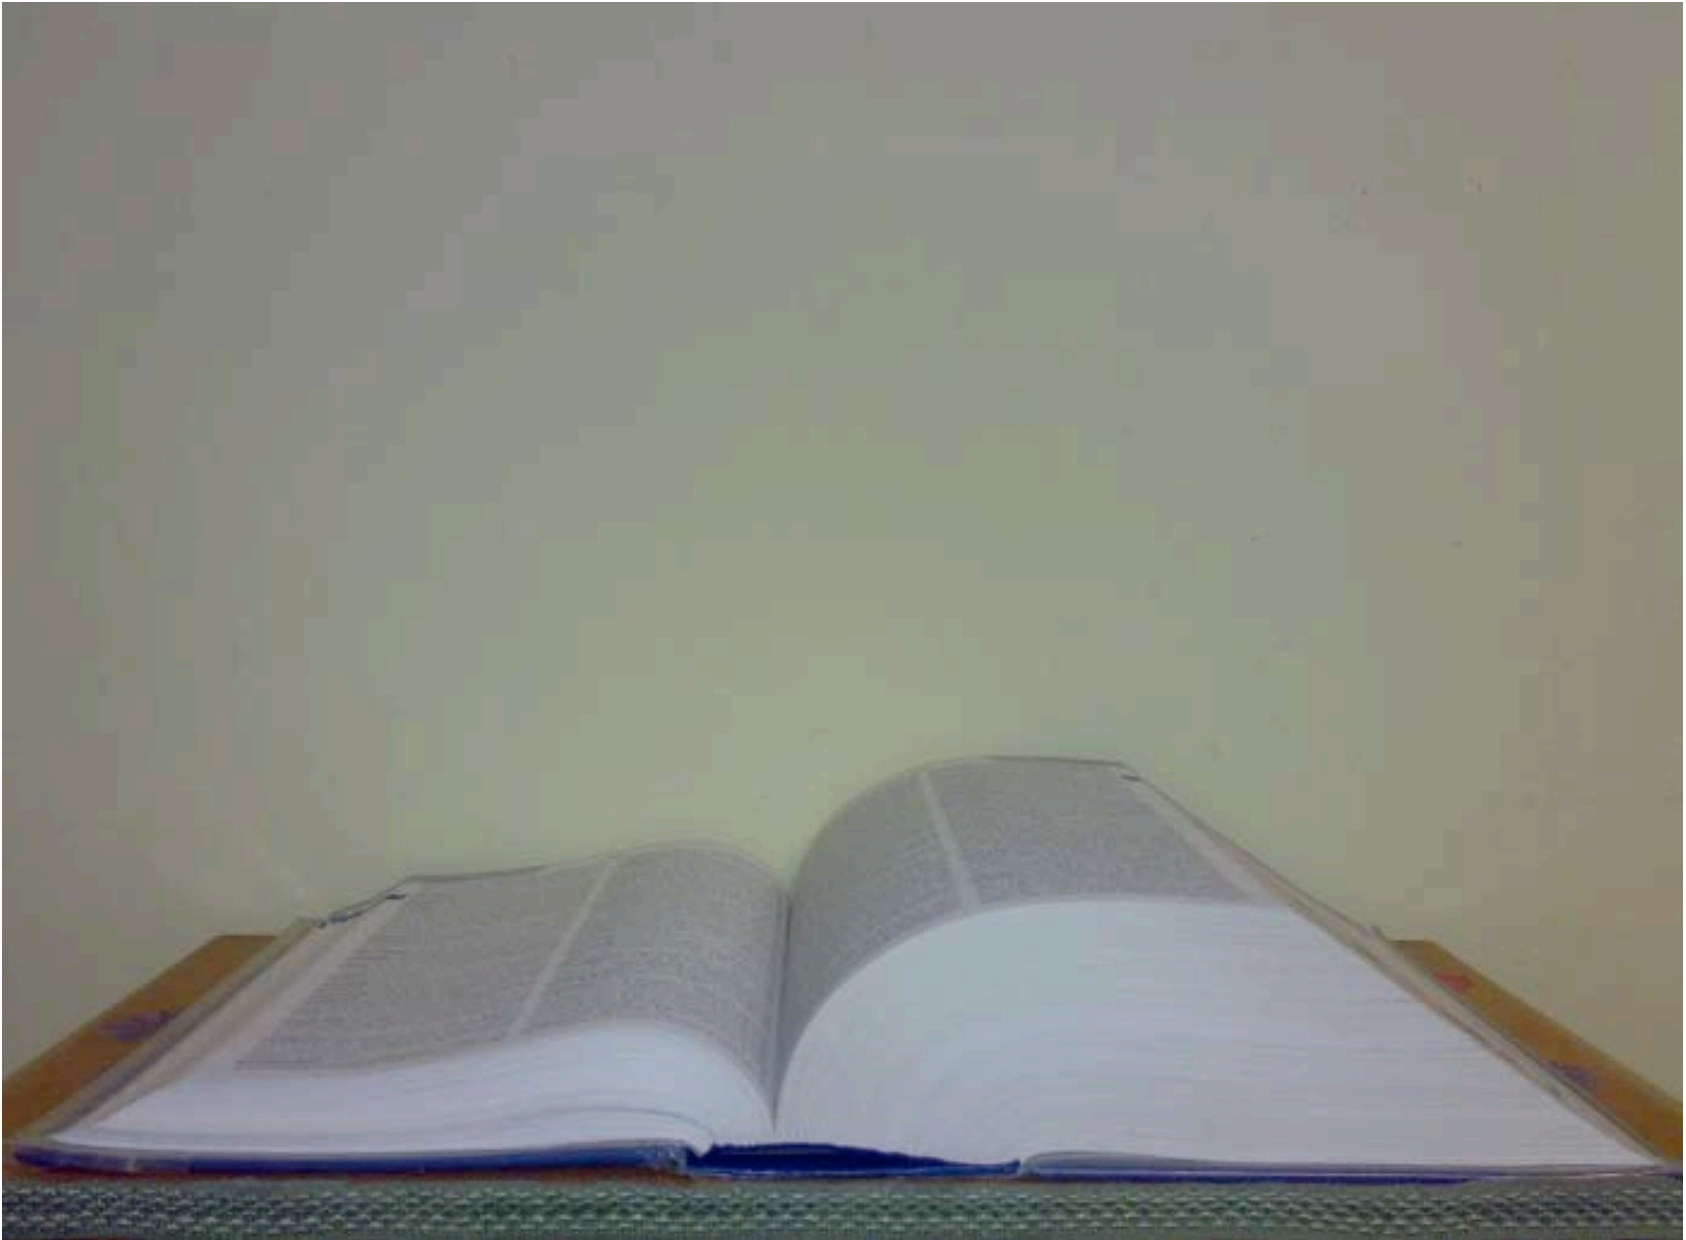

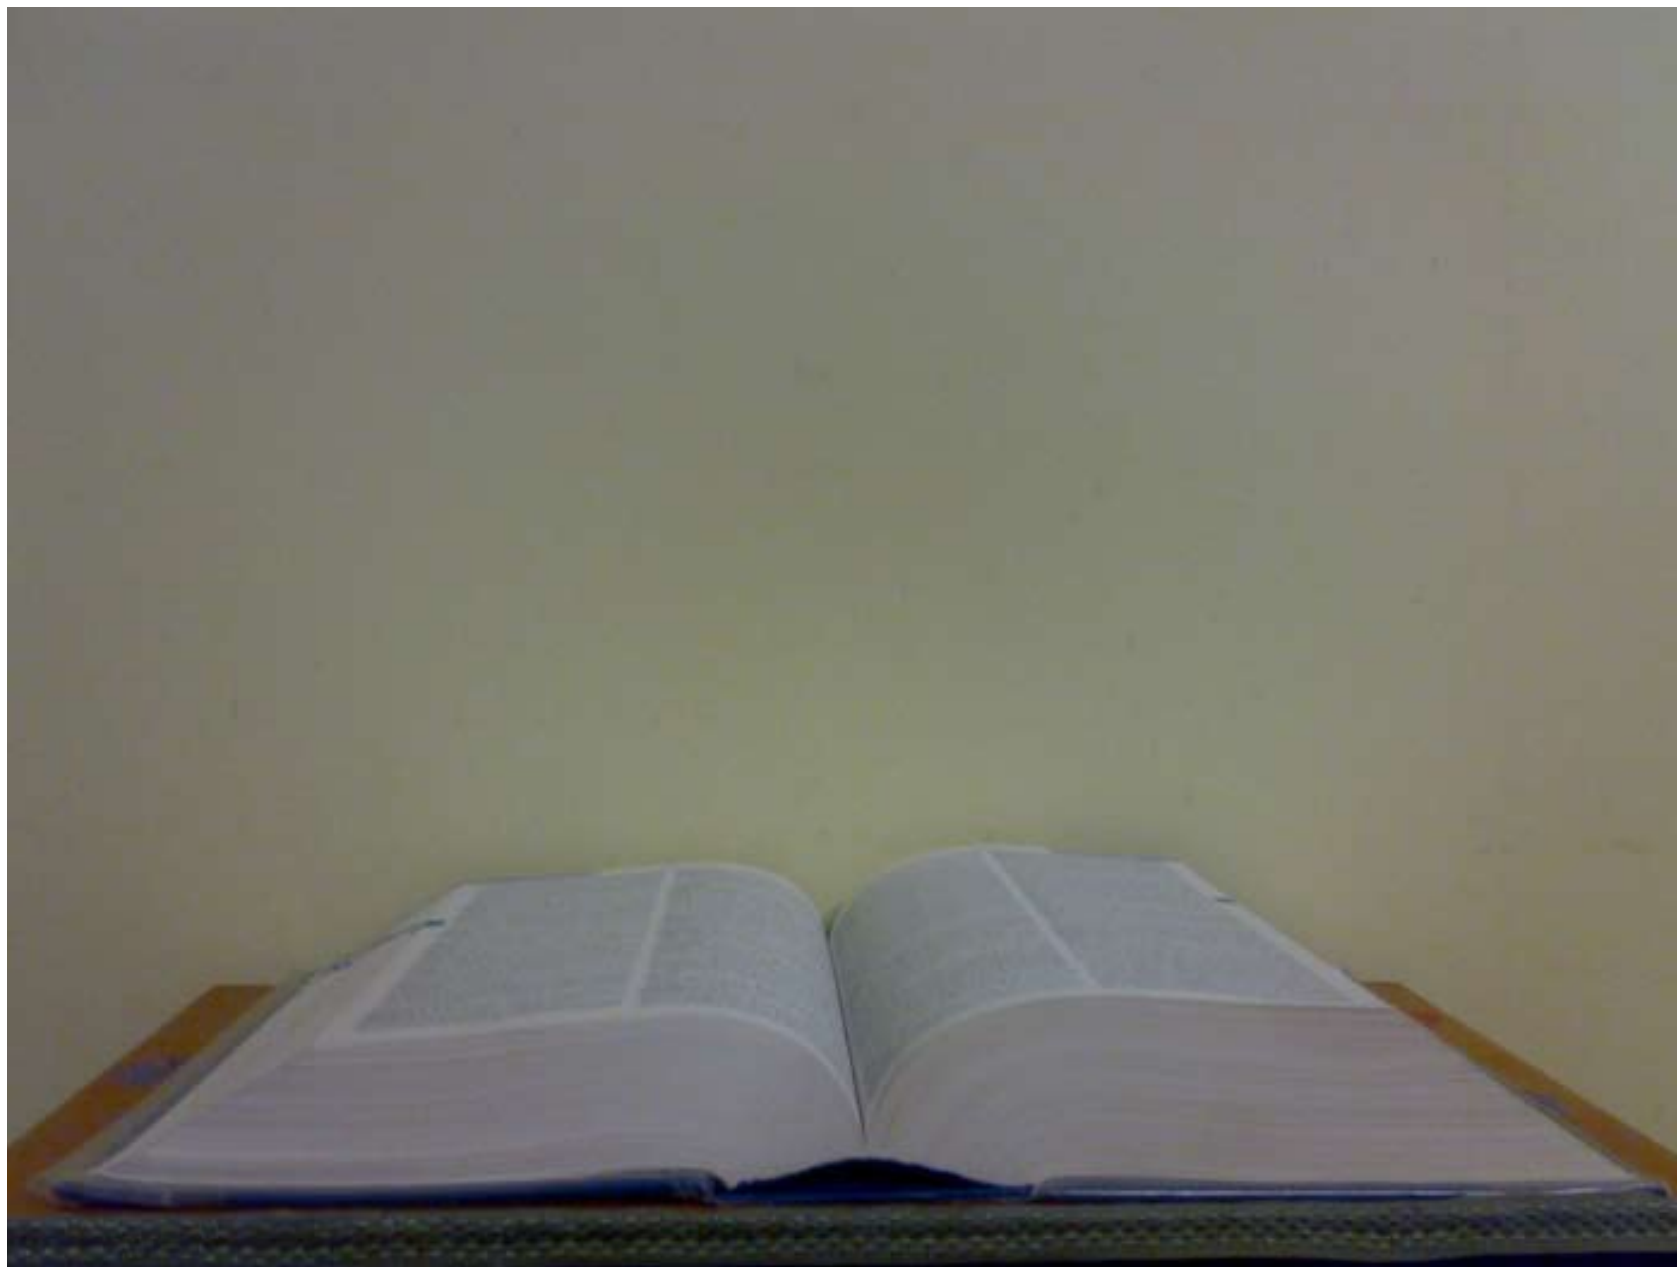

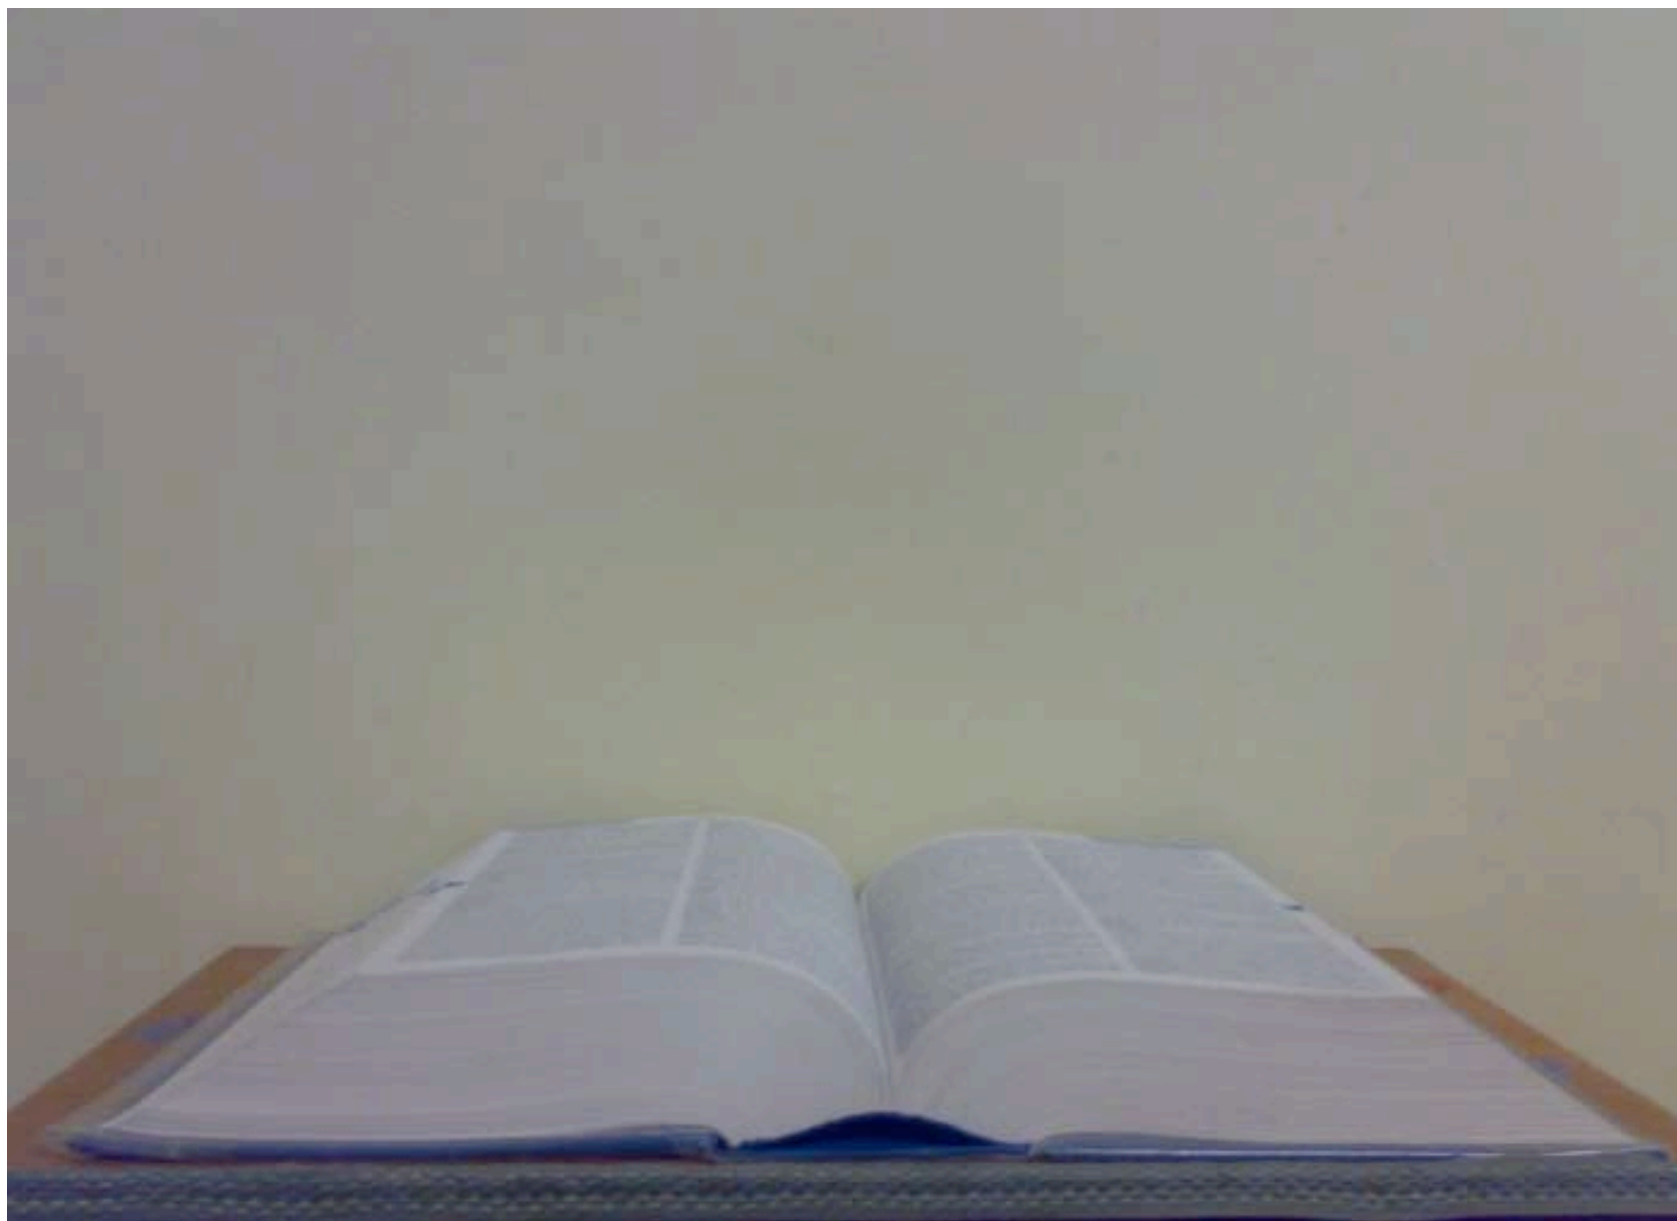

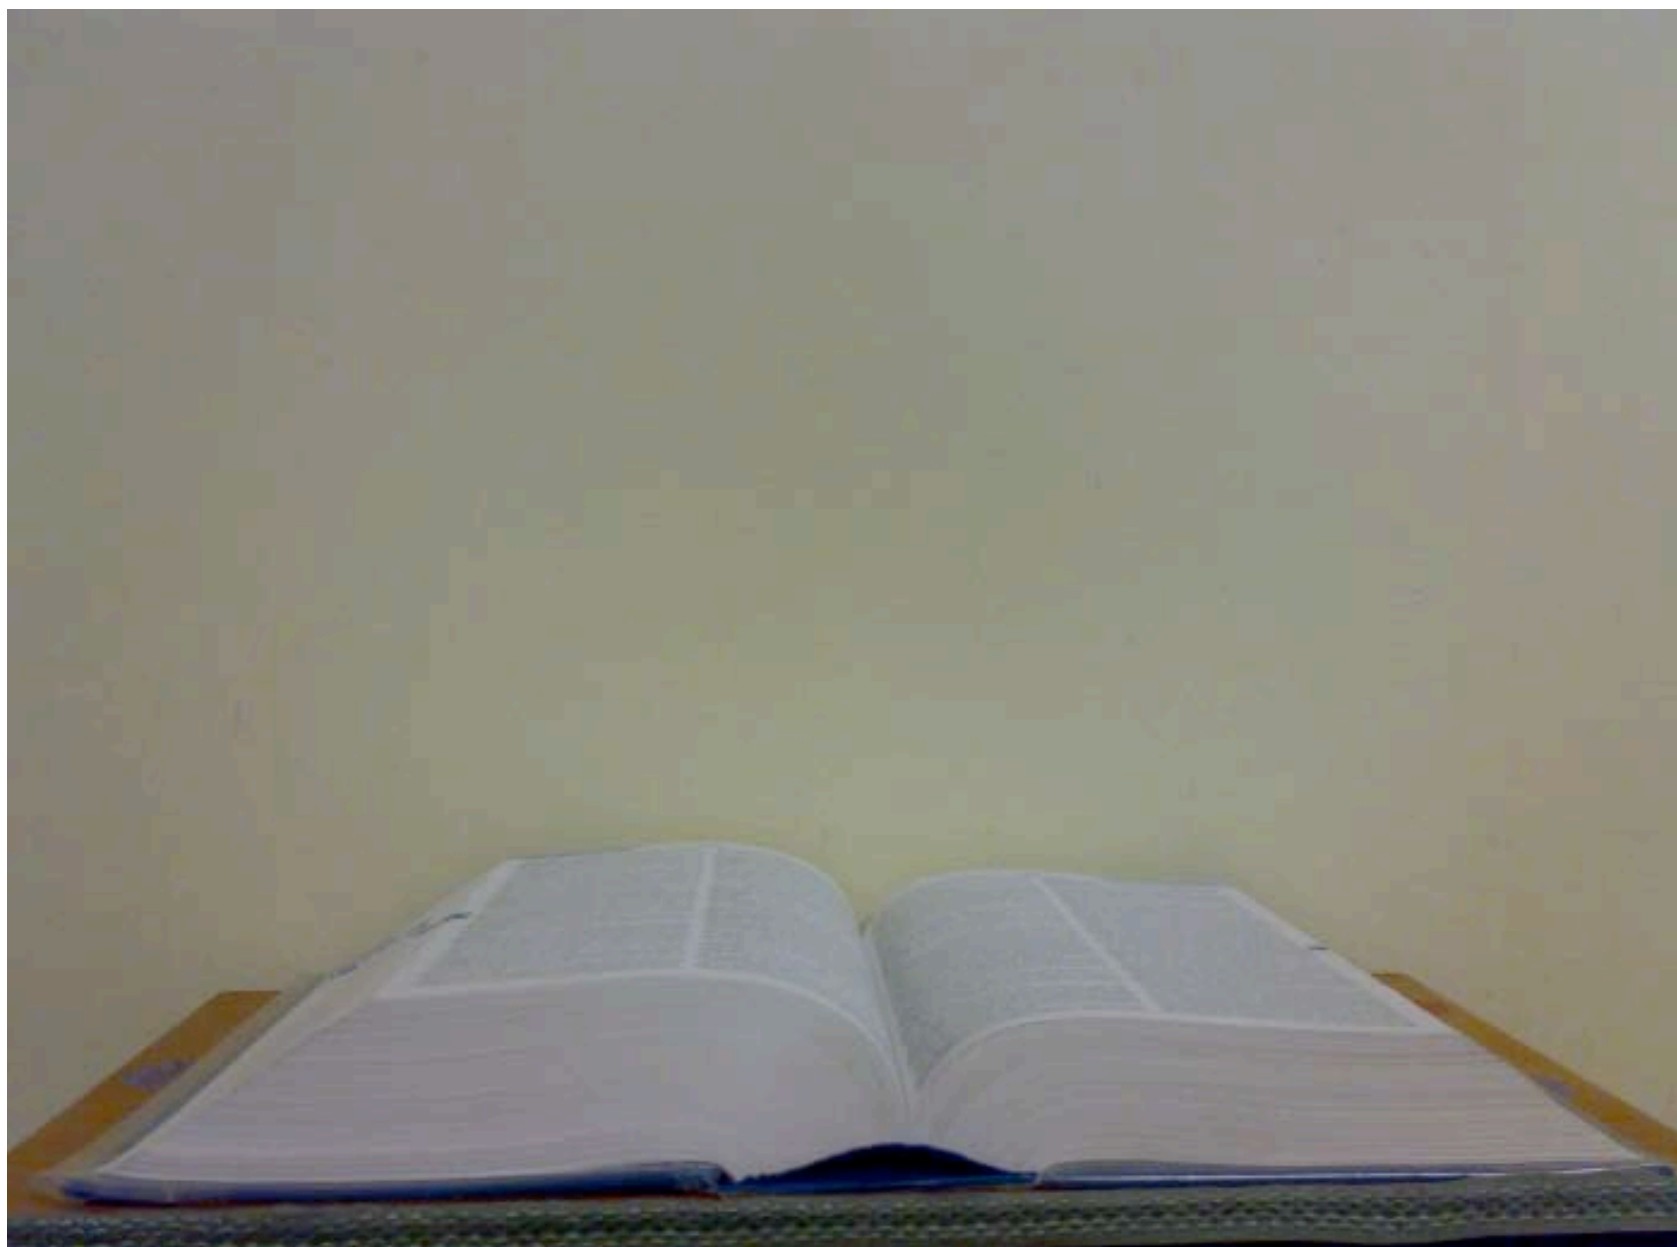

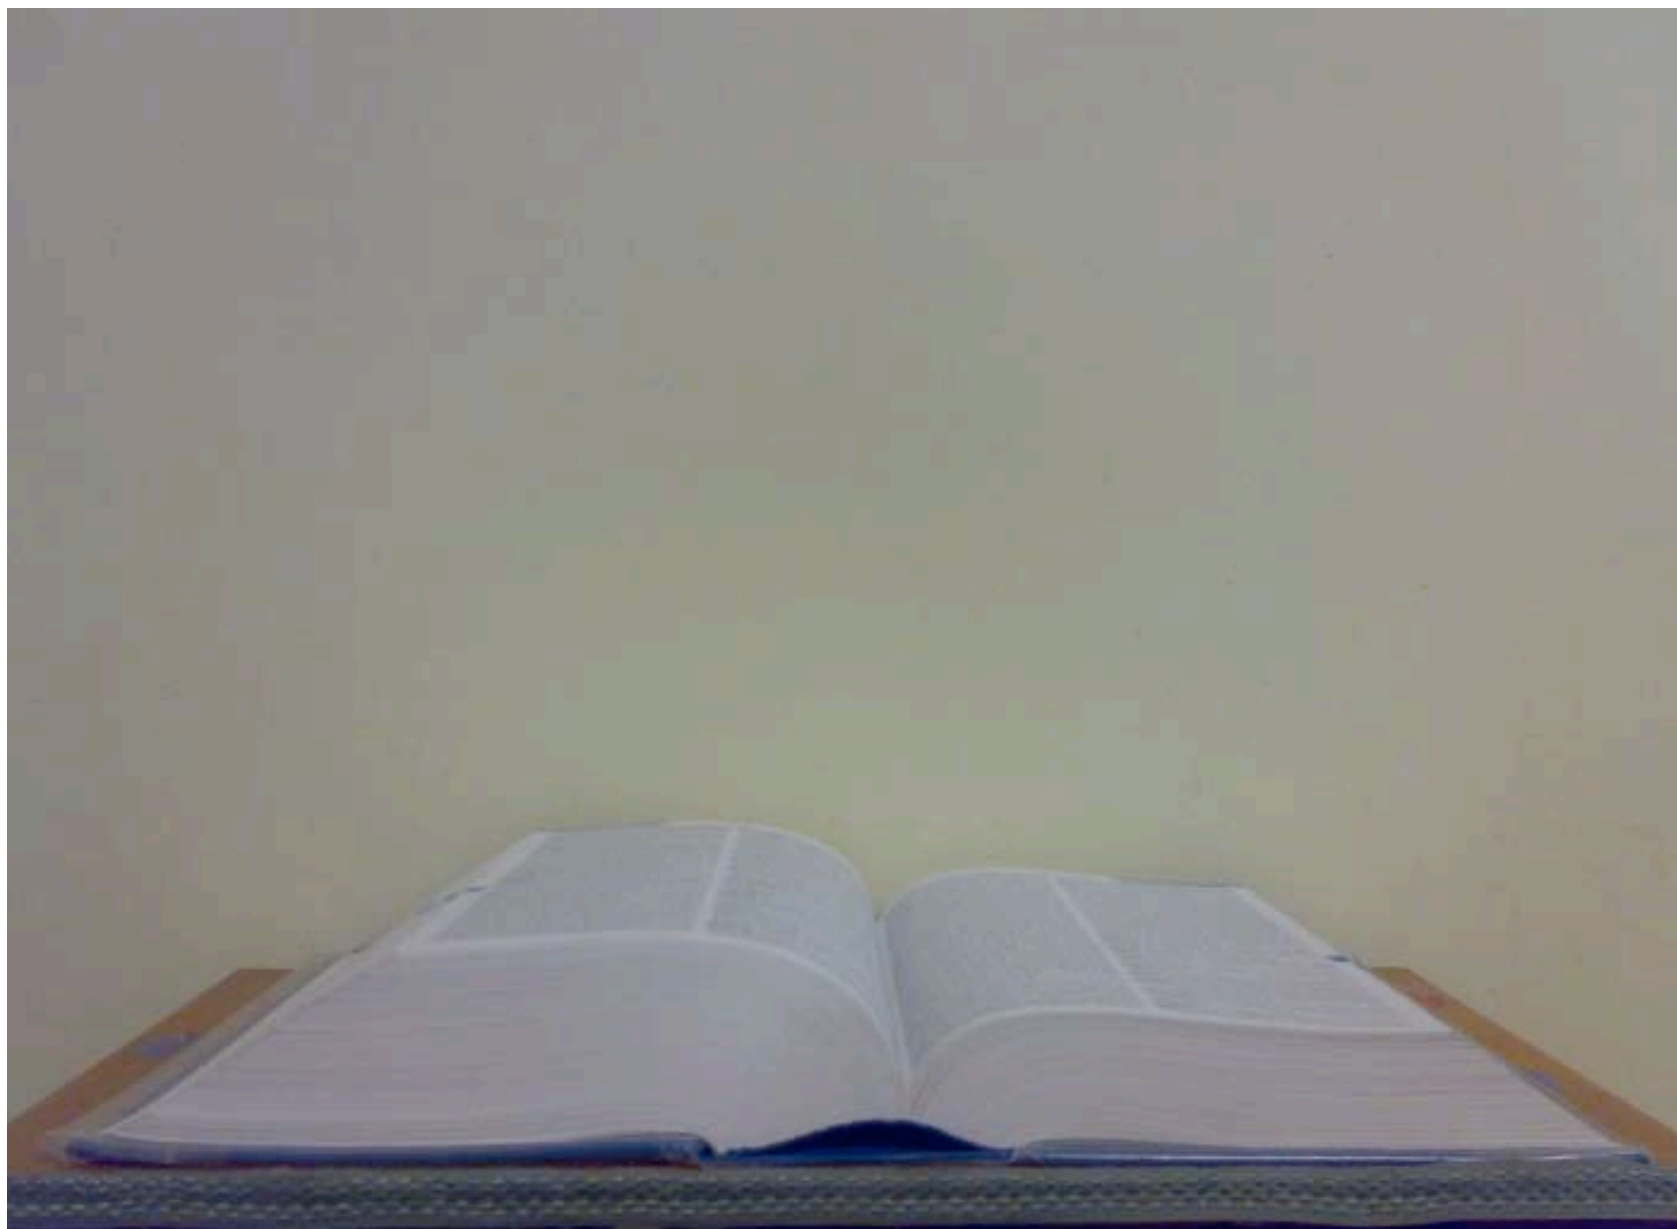

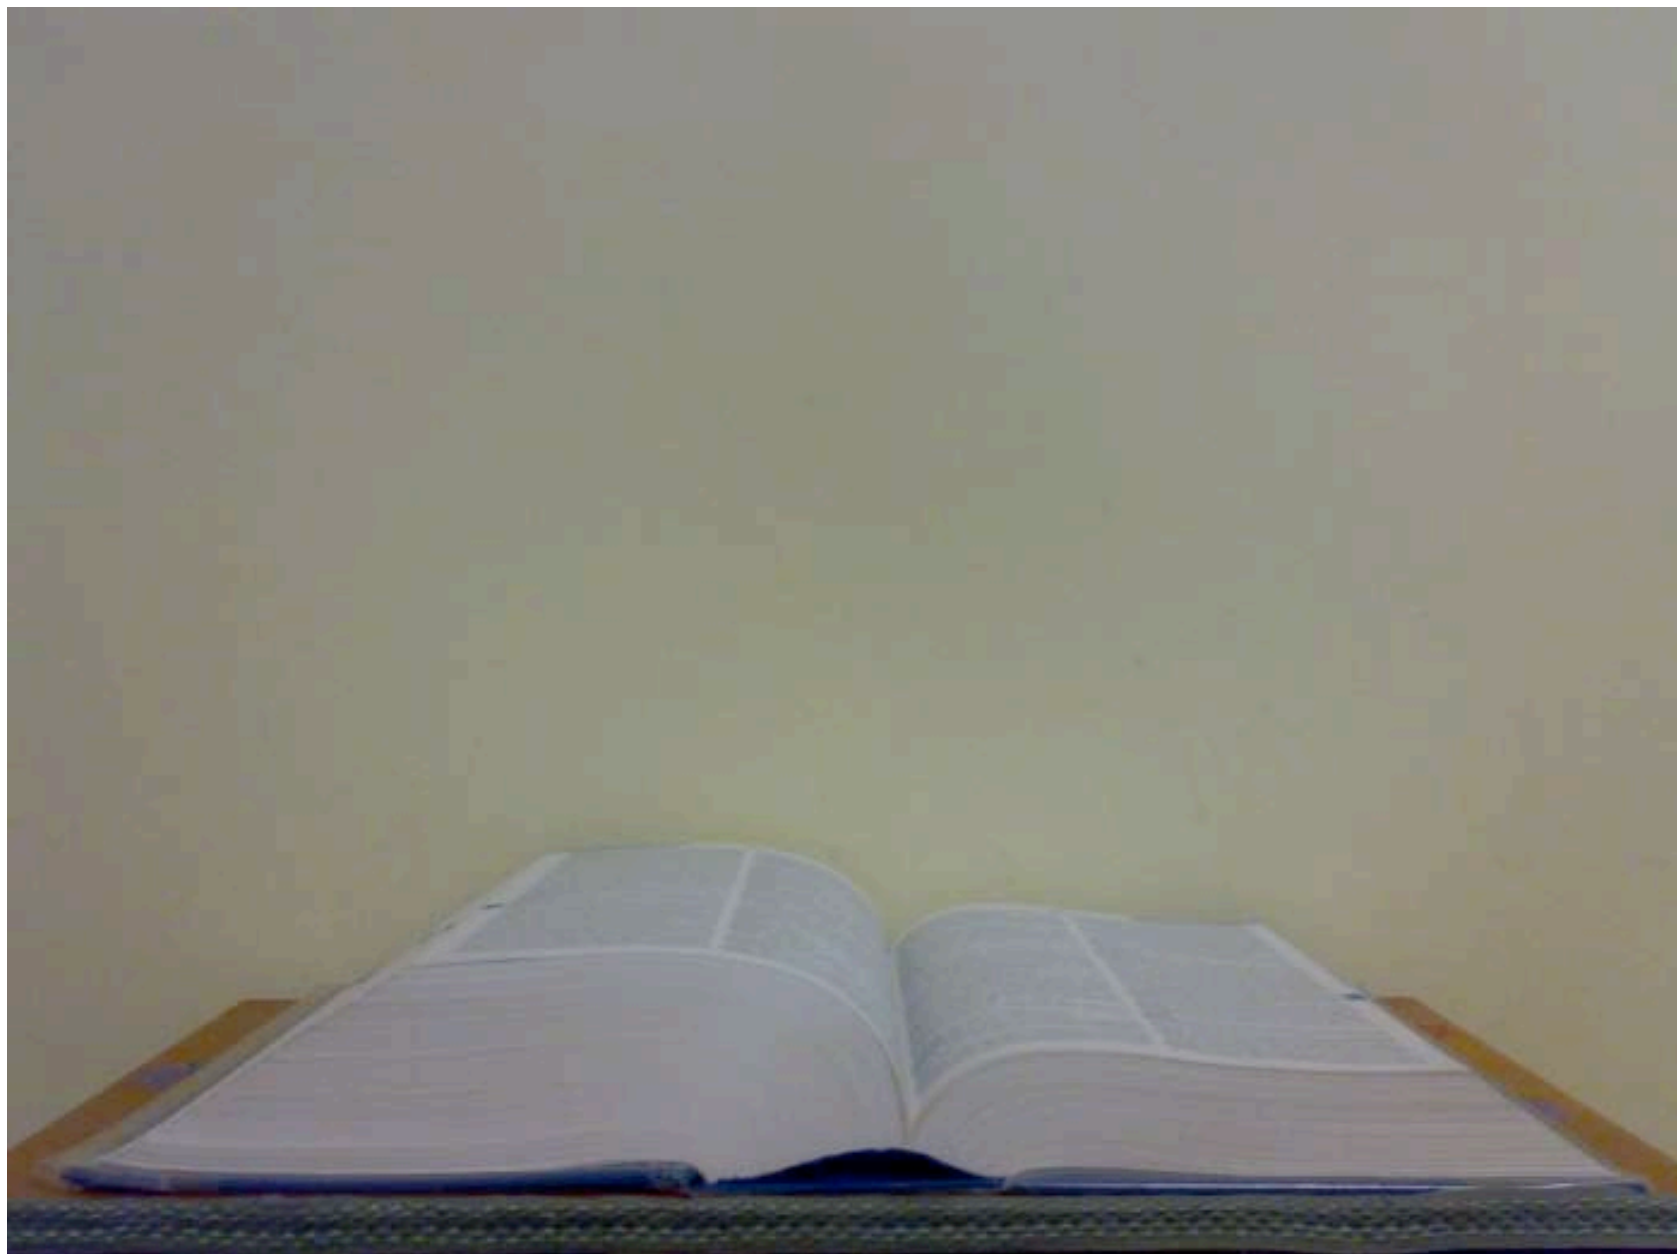

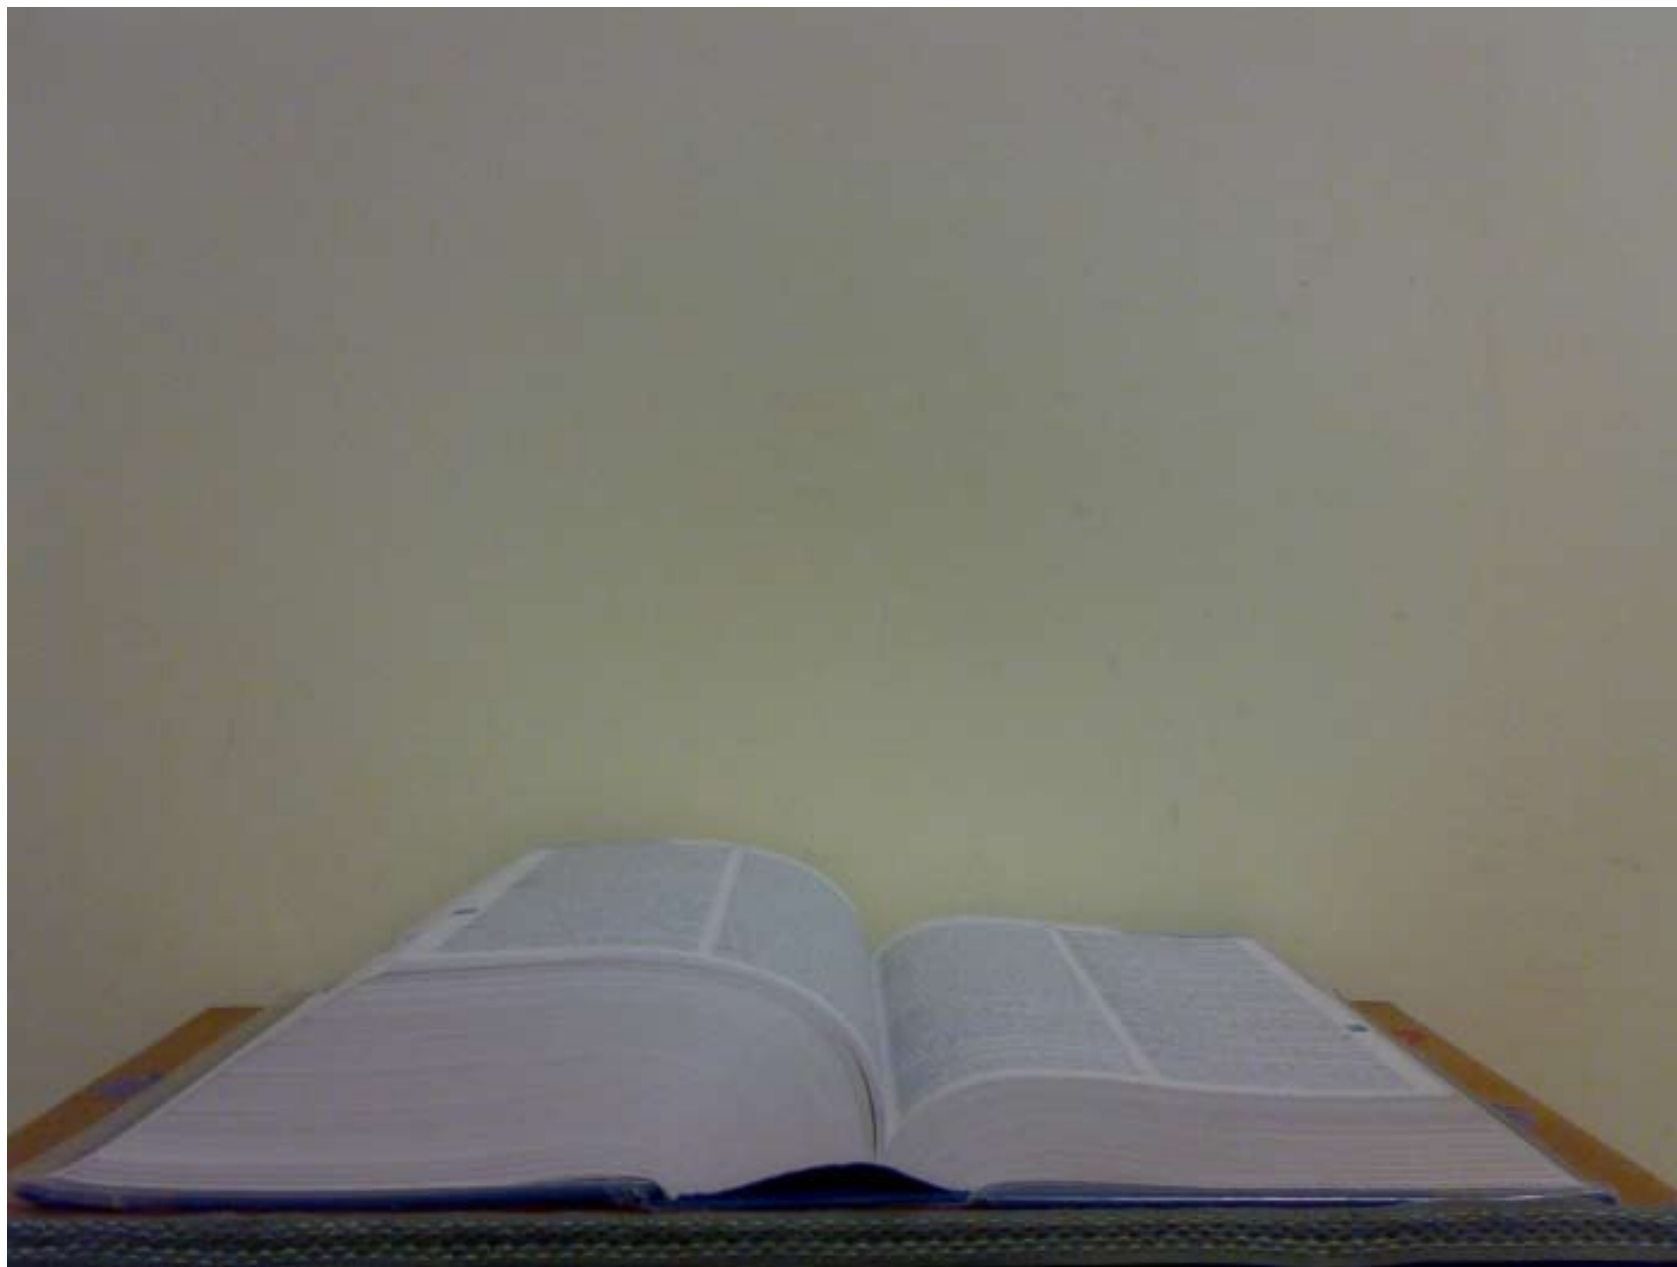

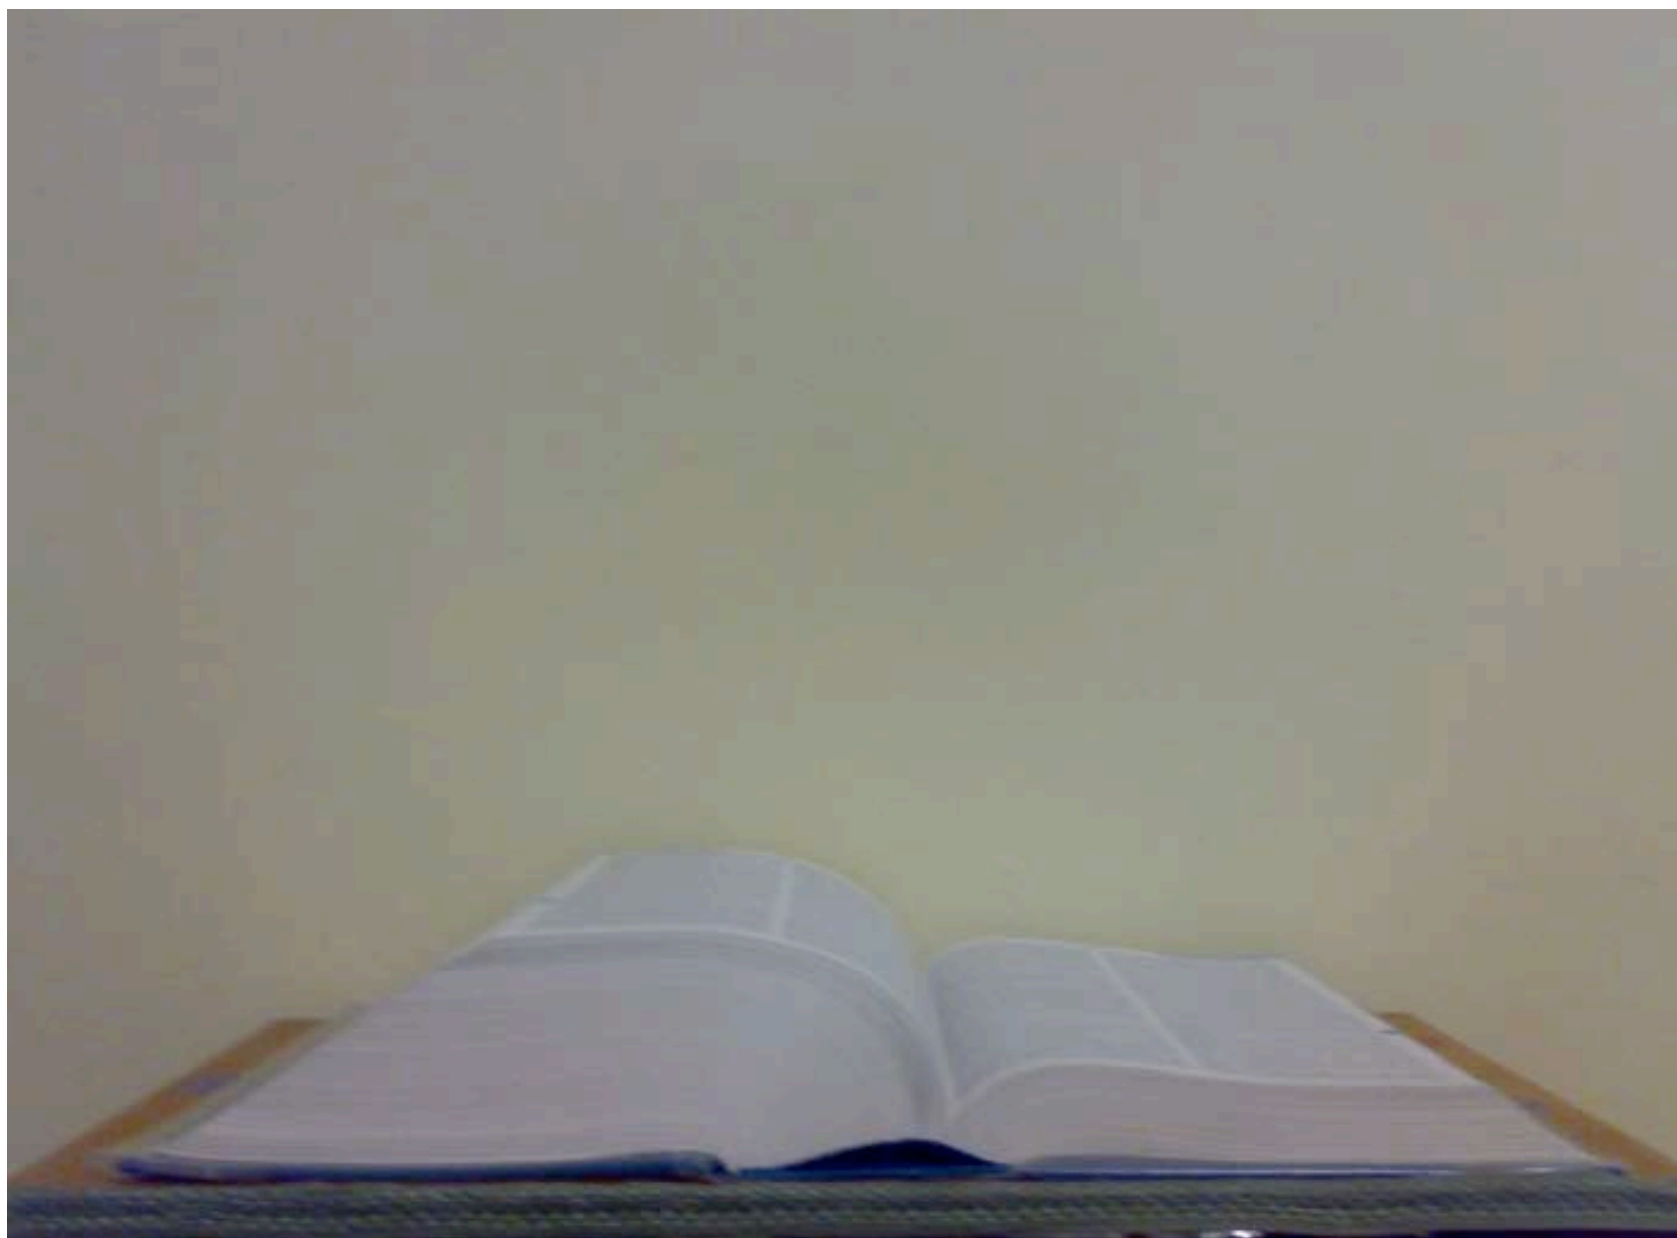

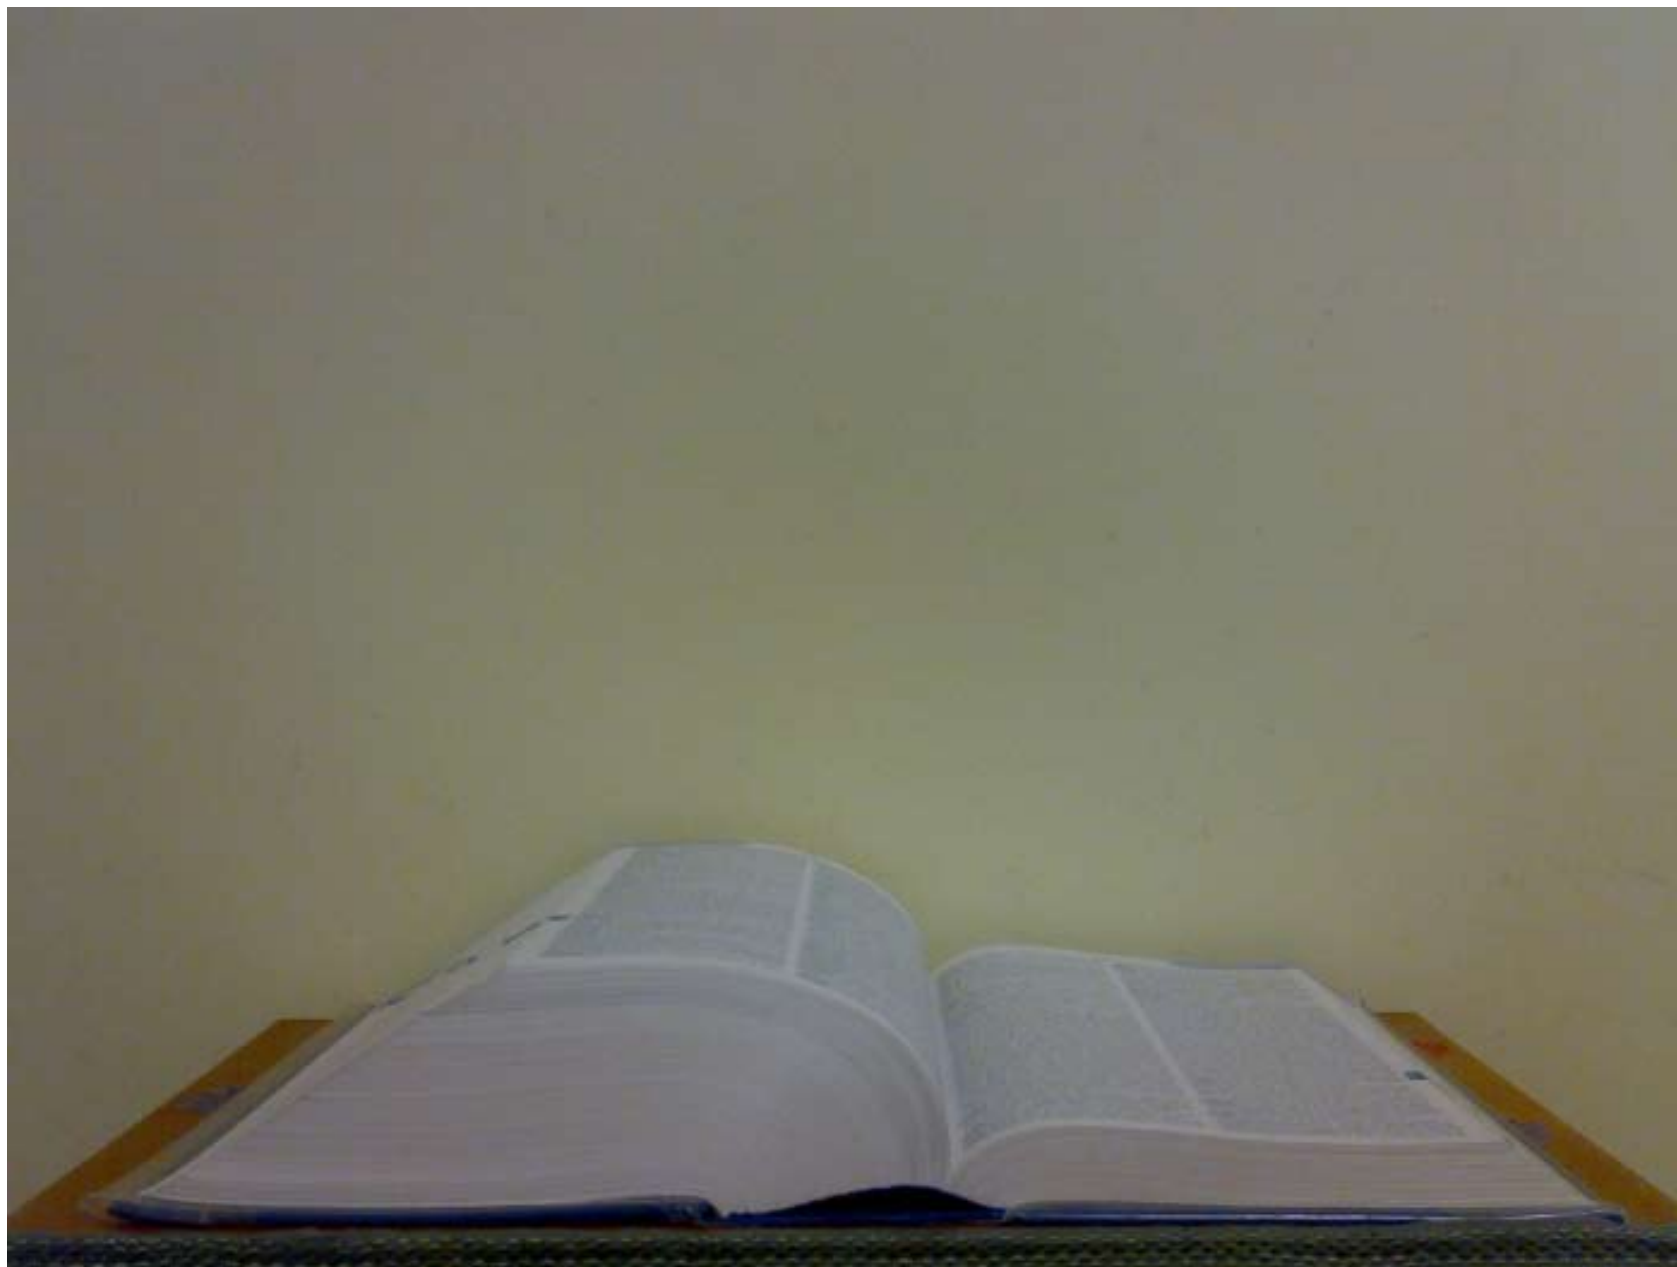

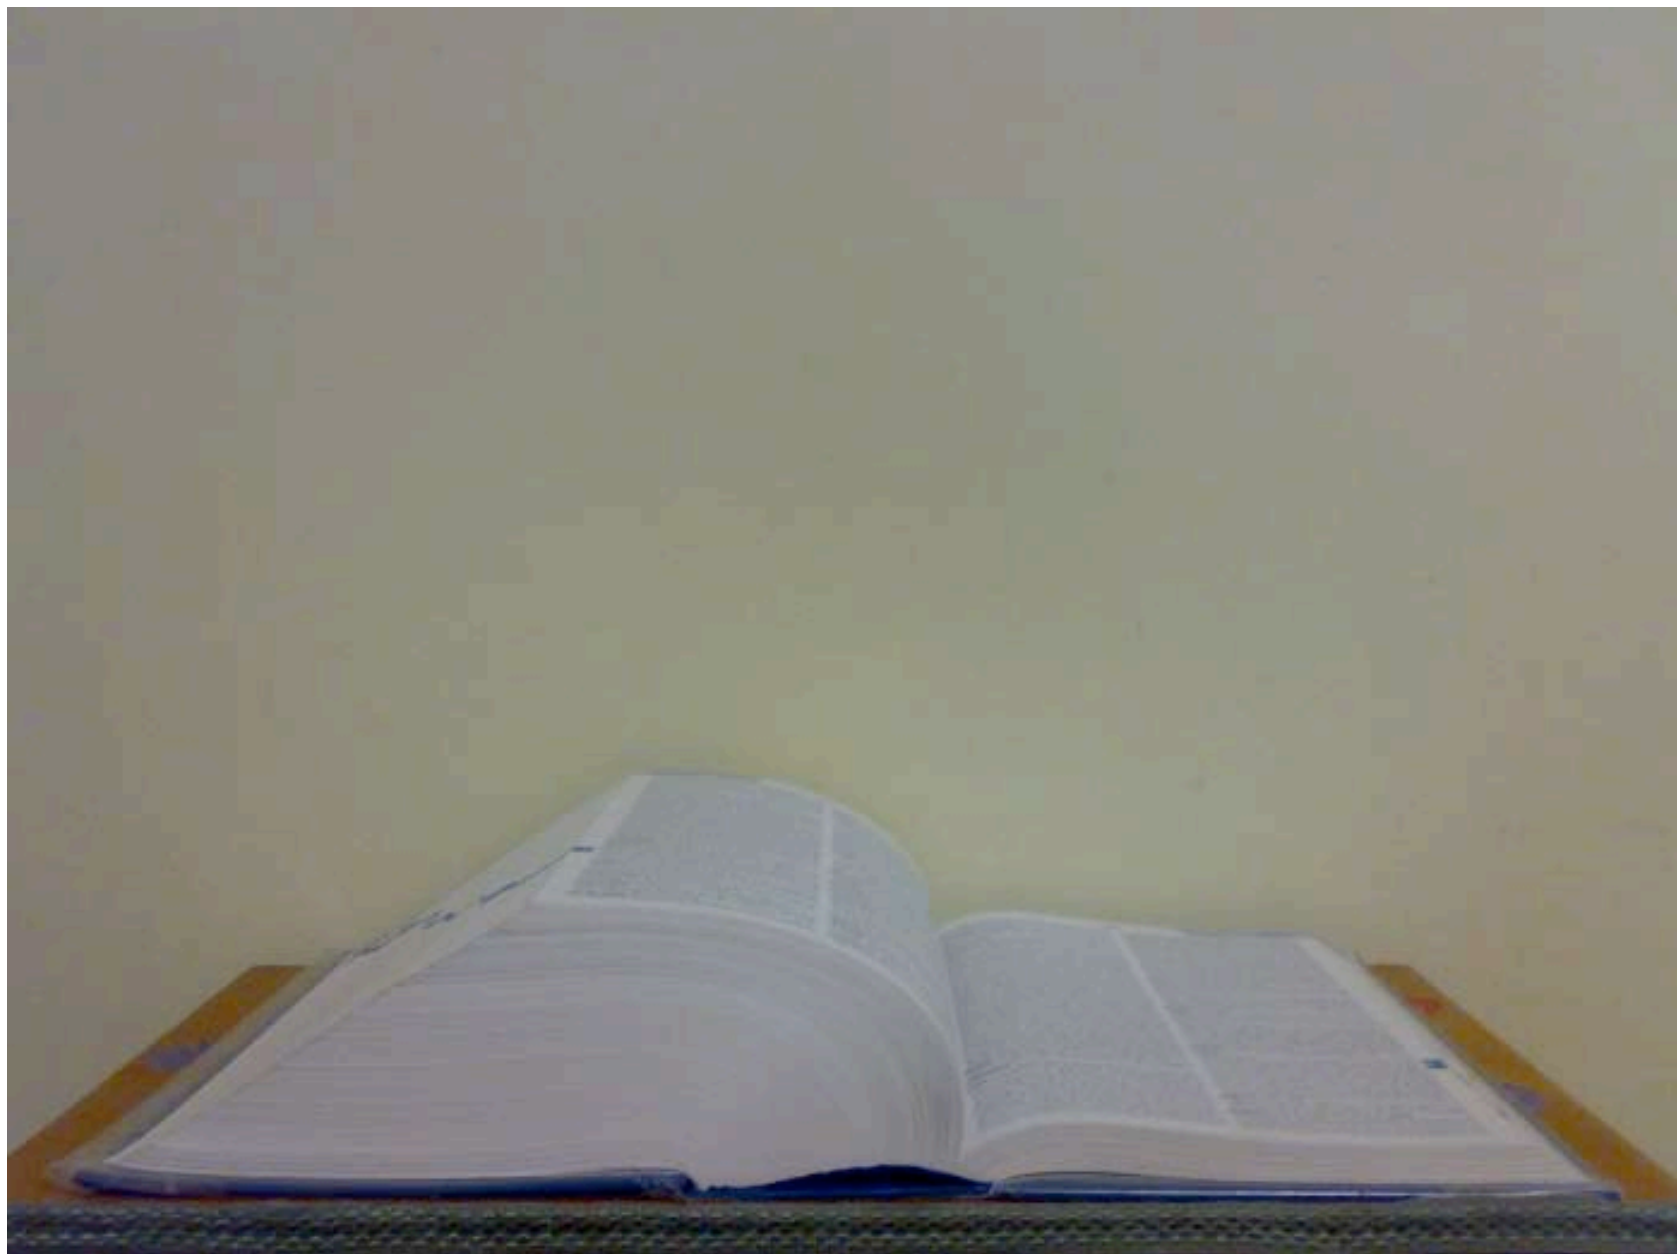

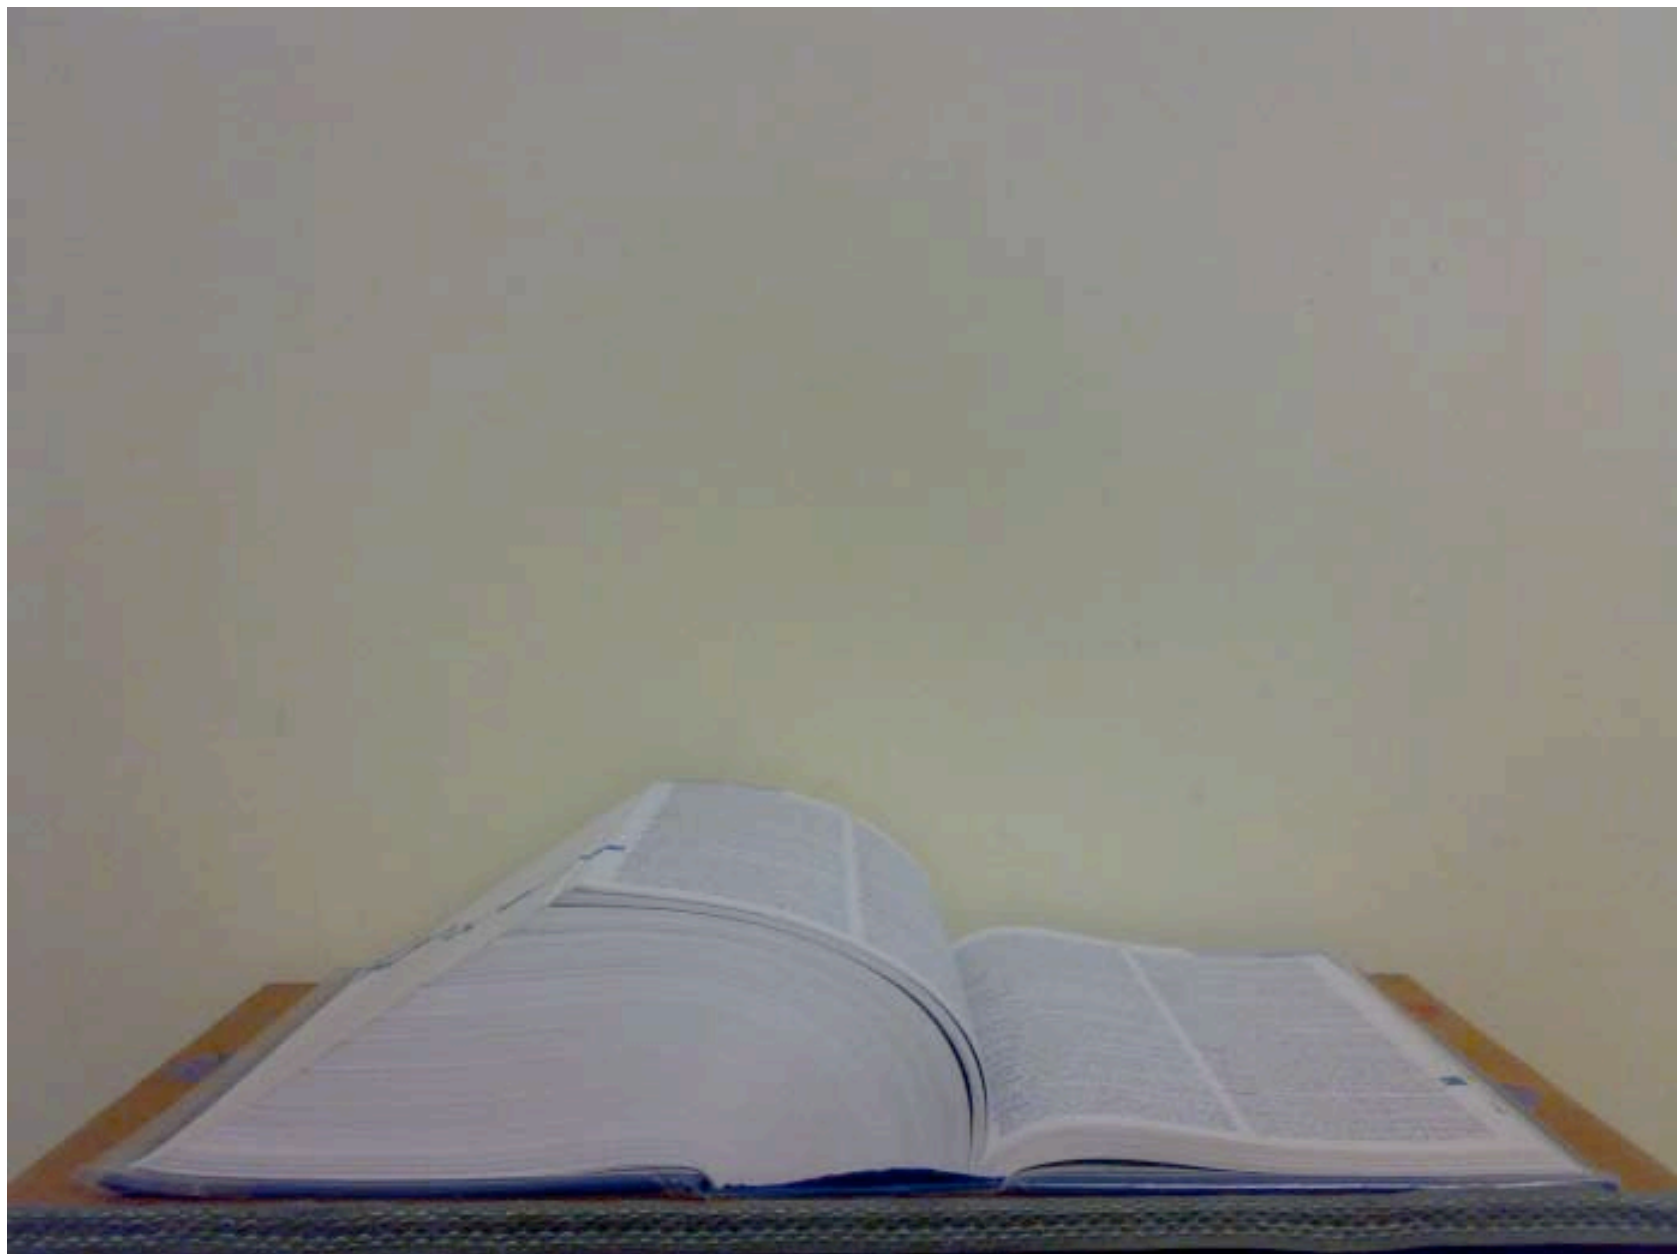

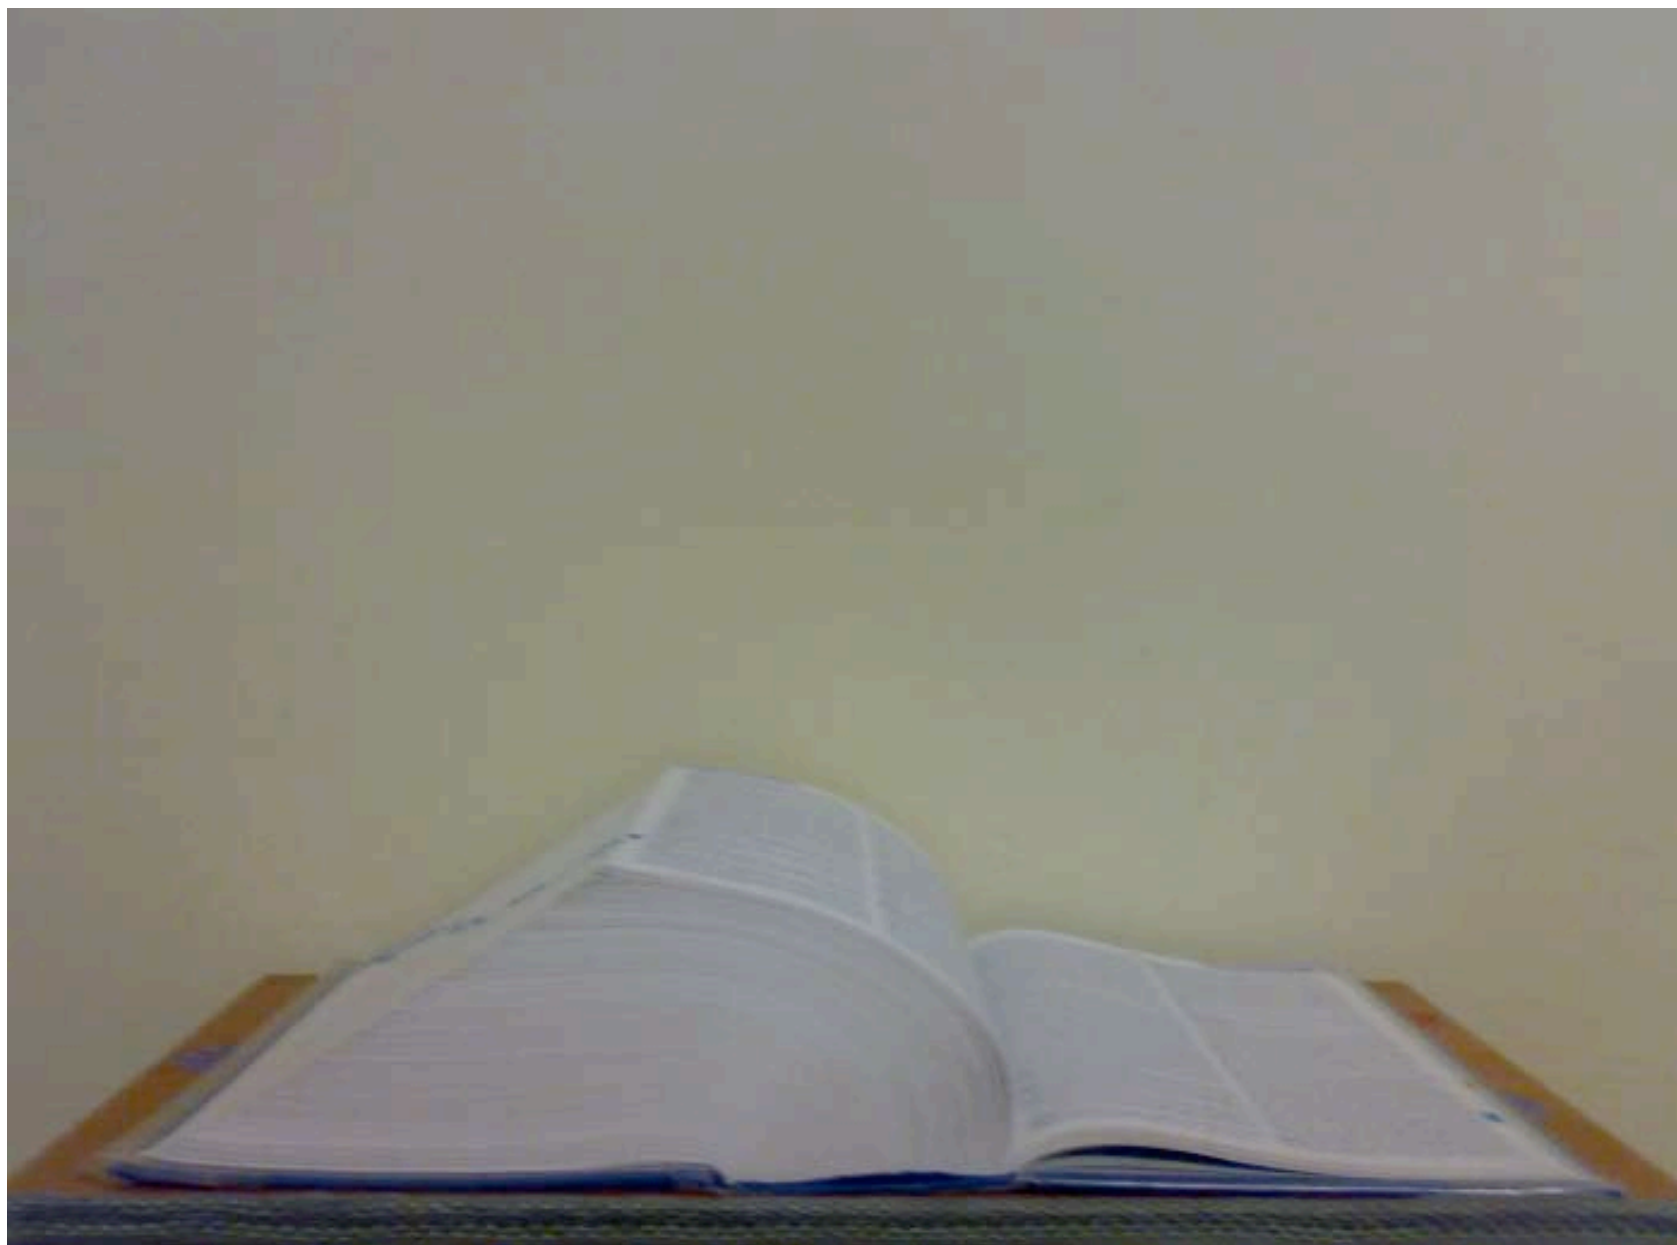

Le carte sono **ordinate/disordinate/né ordinate né disordinate?**

La torta è **completa/incompleta/né completa né incompleta?**
